A NEW YEAR'S WISH

At the dawn of a New Year we greet
 our many good friends and customers through-
 out the lumber industry.

May the light that illumines the highroad
 to health, wealth and prosperity, shine steadily
 for you during all your endeavors of 1920,

HOCKEN LUMBER CO. LIMITED

603 Confederation Life Building, TORONTO

Phone Main 3153

This is unusual

*The First of the New Year
and out of some sizes entirely*

As it will be at least four months before the mills start again and another two months at least, before lumber will be in fair shipping condition would it not be well to check up your stock and put yourself in the position that you will not be forced to turn down desirable business because you are **OUT OF STOCK**.

Our Idea of Service

EXCESSIVE rains have retarded hardwood production. We are frank to admit that our stocks are broken from supplying the constantly growing demand of our customers. However, we are producing a fair volume of Ash, Elm, Hickory, Maple, Oak and Poplar with the aim of giving even better service, if possible. And, as always, our customers must be satisfied. If it happens that we can't help you in the above lines we may be able to refer you to someone who can. Ask us.

Uncertainties —in most things Certainty in One

"SERVICE" — Something promised but seldom given—the most common word in the lumber language and the most uncommon in the "getting"—that's uncertainty.

It has been our earnest endeavour during 1919 to render "SERVICE" in all our dealings. We will enter the New Year with the same ambition—that's a certainty.

Attention! Attention!

Have you studied the conditions of the supply and demand of all commodities? Have you read opinions of well read men? If so, you will know that the peak of high prices has not been reached, in all commodities and that the opinion of the best posted is, that they will not be reached until the spring or summer.

Lumber, especially, will go a deal higher, on account of labor trouble, heavy rains in the south, and other conditions, and also on account of the heavy consumption which will be increased materially in the spring. Look at the prices on Hardwoods and see how they are advancing every day.

CYPRESS is the best value to-day, and when you look for this wood—look for Service. We can give it to you. With up to two million feet of CYPRESS in our Cairo yard, and large stocks in the south, we can make prompt shipment. Buy now. Write us for prices.

Pine and Spruce SAWN LUMBER Lath and Shingles

Tapatco Stapling Device for attaching hooks gives a firm hold long after the fabric itself has become weakened by use.

Right willingly they tug— when their necks are comfortable

The work your horses do, depends largely upon the condition of necks and shoulders. That's where the strain comes, as they tug at the traces. That's where protection is needed. - The only proper protection is that afforded by stuffed collar pads such as

TAPATCO

REGISTERED BRAND TRADE MARK

Made of splendid grade of drill, stuffed with a special composite "stuffing," our Pads fit snug to the neck, absorb the sweat, and so completely "cushion" the shoulder muscles that the comfort of your horses is ensured.

Think of the loss you suffer when horses are laid off—do away with sore shoulders by this sure protection, and so keep your horses at work every working day in the year.

Tapatco Pads are soft, springy, absorbent—they prevent galled, bruised and chafed shoulders.

These Pads are sold by practically every merchant who carries harness or hardware. Do not take substitutes. Insist on "The Pad with the felt washer under the hook staple" (Patented in U.S.A. Dec. 1, 1914. Patented in Canada Apr. 6, 1915). If you have any trouble getting this Brand, write direct to

THE AMERICAN PAD and TEXTILE COMPANY
CHATHAM, ONTARIO

"Thirty-eight years making pads."

KEEP YOUR WORKMEN SATISFIED!

RELIEF from the general building shortage which confronts us to-day will come in proportion to the extra production your workmen give. They give this extra production when working conditions are agreeable. Keep them satisfied. Give them a clean, healthy place to work in; it is a paying investment. A mill clogged with sawdust and shavings retards production; it is neither a pleasant nor a safe place to work in. Dust-filled air is not healthful. The constant breathing of dust into the lungs impairs health and impedes energy.

REMOVE THE SOURCE OF DISCONTENT

by taking the sawdust and shavings directly from the saws and planers. Install a

Sturtevant

(TRADE MARK)

Planing Mill Exhaust System

and place your mill on a production basis and your workmen in a co-operative frame of mind. Sturtevant systems are complete. They are built to your requirements. Installation is simple, and upkeep is a minor consideration

Our bulletins on these systems are very comprehensive and will be sent for the asking.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice, at Buffalo, N. Y., under the Act of Congress of March 3rd, 1879.

Vol. 40

Toronto, January 1, 1920

No. 1

The Forward Movement in 1920

It is customary in certain lines of industry to present a review and preview of existing conditions at the close of one year and the inception of another. This has become a sort of tradition, the same as individuals generally make a self-inventory at this season, taking stock of their virtues and faults and making new resolves to carry out certain desirable undertakings or assume personal attributes, the excellence of which they readily recognize. It is true that the zenith of ambition is rarely attained, but the mere fact of looking up causes an uplift, and if there is nothing very concrete in the way of results at the end of each season, there is a certain amount of satisfaction, mental and moral.

In past years it was comparatively easy to make a reasonably accurate forecast of lumber trade conditions, basing predictions and observations on the experience of the past and the status of matters at the present, but all standards by which the future was described have been set at nought and during the period of readjustment, chaos and clamor, unrest and rapidly shifting events, nothing that transpires arouses more than passing interest. The only advice that can be given by leading exponents of any industry is to keep affairs well in hand and to pursue a steady, even course, trusting that all will come out right in the end.

Just what 1920 holds in store for the lumberman it is impossible to foretell. Whether the present abnormal demand will continue, whether values, high as they are, will go on ascending, whether labor will be as restless and exacting during the next twelve months, and whether the era of good times and activity in all industrial undertakings, closely allied with lumber, will be evidenced in as large a measure as in 1919, are things that for the present remain unknown.

As long as building activity keeps up, it is a pretty sure sign that many other co-related industries will enjoy a full quota of prosperity. After all the lumber industry depends for its stability and progress on home consumption and export. One of the greatest sources of home consumption is the erection of new homes, warehouses and factories. When one stops to analyze just what this means—particularly the construction of new dwellings—it can be broadly interpreted as an increase in the population of each town, a growing demand for furniture, automobiles, musical instruments and other like conveniences or luxuries, the creation of which reflect activity in the woodworking line. Without the multiplication of new abodes, production in other avenues is likely to fall off. The interdependence of every branch of the woodworking world is seen when it is considered that about 80 per cent. of all forest products of the Dominion enter into building construction or in the equipments and facilities closely connected with this department.

During 1920 the lumbermen may have more acute problems to face than he had during the war. While help may be more plentiful, it is more costly and inefficient, and if hours are shortened and wages still increased, all this means that the producer must get a higher figure for his lumber, and just how exalted values will become it is not possible to predict. Each individual has his own opinion, based largely upon his personal horizon, the amount of stock he has in hand or the prospects of having his needs met during the coming season by new sources of supply. There is, however, a feeling of optimism prevailing in the trade, such as has not been in evidence for many years, and if every attempt is made to obtain the maximum of efficiency in production and labor realizes its position and does not make unreasonable demands, with a fair snowfall, good winter weather and early spring rains, the output of lumber in the Dominion should on the average show a gain from 10 per cent. to 25 per cent.

With courage, co-operation and a mutual appreciation of the need of greater production, there is no reason to look disparagingly upon the lumber situation for 1920.

The stability and strength of the market will depend upon several contributing elements, only a few of which have been outlined. In the midst of perplexity and cross-currents there is every reason to believe that 1920 should be a bountiful one to the lumberman, be he a manufacturer, wholesaler or retailer, for after all these branches are linked closely together and what affects one has a corresponding response on the other. If all departments will pull together in 1920 it should prove a banner year for the exponents of a great national industry.

Practical Steps to Ensure Comfort

The town of Grand Mere, P.Q., is a model town in many respects—in others, it is the reverse. The Laurentide Company, Limited, takes a great interest in municipal affairs, not only on its own account, but also by reason of the hundreds of employees in its lumber, pulp, and paper mills. The company has gone a step further than mere academic interest. A citizens' committee was appointed to investigate the town's affairs, with the result of a report to the effect that many changes are desirable, both as to the methods on which the town's business should be carried on and as to improvements in the way of waterworks, lighting, and sewerage.

These involved considerable financing, and this is where the Laurentide Company comes in. The company stipulates that a manager of the town must be appointed, the directors agreeing to pay the salary. The company further agrees to contribute \$10,000 per annum towards the general administration expenses and to spend, by annual instalments of \$40,000, the sum of \$200,000 on a municipal waterworks system.

Quebec lumber, pulp and paper companies have taken the lead in providing housing accommodation for their employees, and the Laurentide Company has now extended the idea of participation in the material wellbeing of men and has taken a hand in the direction of municipal affairs. This is, of course, an exceptional case, but it indicates what can be done where the management believe in going beyond the mere employment of men, and take practical steps to ensure their physical welfare and comfort.

The True Value of Associations

The work of trade associations is not appreciated at its true value. There is too often a lack of interest in the various questions affecting particular trades—questions of vital importance which have a very decided bearing on the growth of an industry or on matters which involve pecuniary considerations. The excuses for not becoming members are various—"No time," "Cannot afford it," "Association no good," are samples of the pretexts on which men shift their responsibilities. These men are not alive to the invaluable work which associations are doing, and in which these men, indirectly, share the benefits.

Every trade is more or less subject to attacks by federal, provincial, or municipal authorities, while in the matter of freights the railway companies look very keenly after their own interests. The defence of the trades involves the collection of much detailed data and the presentation of arguments to various bodies by qualified representatives. In the absence of an association, the trades are helpless, for individual efforts are of little avail against powerful combinations. Co-operative effort is therefore the only means of successful defence, and the trade association is the ideal organization for combatting attacks on trading interests.

In our last issue was published the annual report of the Montreal Lumber Association, and a perusal of the subjects dealt with during the past year indicated the value of such an association in handling such questions as stop-off and reshipping arrangements on lumber in transit, tariffs, collection of transportation charges, and delays in cartage freight. Questions like these often call for immediate action, and with a live organization at hand, there is a medium through which reasonable adjustments can be made, and the trade relieved of burdensome regulations. Such work is not of an ostentatious character, it calls rather for careful negotiations, but the work is none the less of immense value to all members of the trade. It could be made doubly so, if more members of the trade would do their part and support the associations, financially and by active co-operation.

The Glamour of Public Service

If there is any service in the country where the highest qualifications are expected and the lowest salaries offered, it is, possibly, in connection with new or vacant positions in the Civil Service Department of Canada.

A recent issue of the "Canada Gazette" announces that an instructor is wanted in Mathematics for an Eastern institution, an engineering clerk for the Department of the Interior, steamship inspectors for Vancouver and Quebec, an Assistant to the superintendent of the Experimental Farm in B. C. as well as in Fredericton, while applications are also invited for an Inspector of gas and electricity.

All seekers after these public berths are required to have experience, a wide knowledge, sound, basic training, and, in some cases, pass a qualifying examination for which a fee of \$2.00 is charged. It is specially announced, however, that returned soldiers are exempt from paying the fee, which concession is possibly regarded as a life-long gratuity or an outburst of generosity on the part of the federal authorities. In most cases, it is stipulated that the applicants must not be over thirty-five years of age and must be proficient in everything, both related and unrelated to the position sought, and yet what are the salaries offered? The majority of them range around \$1,200 and \$1,300 per annum; as high as \$1,800 in one instance and \$2,700 in another. When it is considered that there are ordinary manual laborers and coal-heavers earning much more than the minimum amounts mentioned for these public posts, it will be seen how inadequate is the compensation. There are any number of industrial employees without any education or special training doing menial tasks who clean up enough in the way of return for their services to make the salary figures offered by the Government look anything but attractive, yet the federal powers exact—or rather expect knowledge, sound judgment, practical experience, recognized standing, general all-round ability, good health and qualifying examinations.

While considerable criticism of an unfavorable character has

been hurled against the Ottawa authorities in not attaching larger salaries to federal appointments, it is, perhaps, not entirely the fault of the employers. There are always numerous persons who are willing to work for practically nothing if they can only secure public employment or any kind, directly or indirectly, connected with the outside civil service. Rightly or wrongly the conception has gone abroad that a Government post is a comparatively easy one and, while the money end of it may be very remunerative at the outset, still it may offer something particularly alluring later on, or once in the ranks, there is opportunity for advancement if one's ears and eyes are kept open.

As long as there are swarms of applicants for every job that does not yield as much as many lumberjacks and general helpers around a sawmill and yard receive, so long will the federal authorities keep down salaries, knowing full well that the very glamour of it being a public position will draw many men and women from the East and West, the North and the South to fill these vacancies, whereas if such openings occurred in the ordinary commercial or industrial arena, they would not think of entertaining such a proposition.

The mere mention of the words "civil service" and "public position" seems to prove a stimulant and an incentive—a magnet or a charm—which a mass of otherwise well-educated and thoughtful people cannot resist. As long as this rush continues and occupants can be secured for a bagatelle, so long will the Government keep down salaries and the administration in various departments suffer from inefficiency and mediocre service. Skilled, carefully trained and competent workers are always the most economical and satisfactory from every standpoint but such help will never be secured at the present scale of federal remuneration.

Editorial Short Lengths

There are 126 daily papers published in Canada, and the total number of publications is nearly 1,600. Still the growth increases even with the constantly ascending costs of raw materials and wages.

* * *

According to recent reports there is a possibility that an order for 121 vessels may be placed by the French Government with Canadian shipyards. The price mentioned is \$170 a ton.

* * *

Lumber is not the only commodity increasing rapidly in price at the present time. During the last few months ground wood pulp has jumped from \$26 a ton to \$50, an advance of nearly 100 per cent., and the end is not yet.

* * *

Victoria, Australia, is establishing state sawmills in order to stop profiteering in timber. Probably government ownership will prove as "economical" and "effective" in the sawmill line as it has in connection with railways and other experimental enterprises. 'Rah! for government management and operation.—we trow not.

* * *

It is announced now that the Canadian Press Association has been divided into three bodies, the daily, the weekly, and the trade and class section, with separate offices and managers; that a better service will be rendered and efficiency maintained at a higher level in various departments. It is declared that the daily papers will receive a more comprehensive news service, as sources hitherto inaccessible will be available. This probably means that instead of recording events after they happen, readers will be apprised of matters ere their actual occurrence. This will be particularly useful in political and market data of all kinds and will rob Canada of a great and growing nuisance known as "I told you so," "I knew that all along," "The result is exactly what I predicted," etc. In other words, there will be more facts and fewer prophets. Perhaps the dailies may tell us beforehand what 2 x 4 good white pine strips and 2 x 8 good sides will be commanding on the market about May 1st, 1920?

How Lumber Business in West Has Piled Up

Curtailment in Log Production May Mean that Mills Will Have to Close Down for While—American Buyers Keen for Stock of all B. C. Plants

Writing to its Eastern representative in Toronto a leading lumber firm of Vancouver presents an intimate and comprehensive review of conditions in the Pacific Coast province. The date of the communication which follows is December 9, 1919, and the facts set forth will be perused with much interest.

Lumber prices here have changed with bewildering rapidity. The last list was mailed you yesterday, and it is impossible to do any business even on a basis of these high prices. In response to a circular sent out to the mills yesterday we were quoted—\$68.00 mill on a car of No. 3 E. G. flooring, which, as you will note, is \$3.00 over this latest price list.

The situation is that the mills have more business booked than they can ship for the next sixty or ninety days—taking into consideration the car shortage, which shows no signs of improvement. In October orders fell off, and the price weakened for the extent of ten days or two weeks. Eastern American buyers, Seattle wholesalers, and Prairie line yard concerns immediately came into the market with such an avalanche of orders that the mills were swamped with business. In a space of four weeks unfilled orders among mills belonging to the West Coast Association increased from six thousand cars to nearly thirteen thousand cars—the total on hand last Saturday night. This represents a net increase of seven thousand cars, although the mills were shipping during all this time as much as they were able to secure equipment for. Our own mills in the B. C. Association were affected much the same way—orders rising from one thousand cars to approximately three thousand cars. The natural consequence was that the prices increased to the highest known this year.

Unprecedented Demand and Low Stocks

The mills have two excuses for this: One—the rapidly increasing cost of logs, which now represents an average price of \$21.00 per thousand for camp run. The other reason is the unprecedented demand for their product combined with the very low stocks on hand to-day. The mountain mills have decreased their stocks about one hundred and twenty million feet since a year ago December first, and coast mills have decreased their stocks almost that much. The shortage of uppers is particularly severe, and the common lumber is all green.

Seattle wholesalers, as usual, were largely responsible for the increase in the market and for a short time the mills eagerly took on business at increasing prices. For the past week or ten days, however, there has been practically no business placed as the mills refuse to accept any further orders. They know that stocks are very scarce, that the car supply shows no prospects of improvement, that their order files are heavy, and that it is most uncertain what they will have to pay for logs before they have filled the orders which they have on hand.

We are experiencing an early and very severe winter, which, if continued, and attended by the heavy snows which we sometimes get in this country, will mean an absolute curtailment of log production in B. C. for some six weeks to two months. It will not surprise us if practically all the mills are unable to operate during January and part of February for lack of logs. This undoubtedly will mean that prices will either remain on their present high level for some little time to come, or go even higher. Prairie dealers have yet to place the bulk of their requirements for the spring trade, as they were unable to get covered during the time prices were going up in October and November.

Booking No Orders for Spring Shipment

The mills now refuse to book any orders for spring shipment. It is possible too, that the East will find it necessary to purchase West coast lumber even at prevailing prices, and this should mean that there will be steady buying all through the spring months when the mills are once more in a position to accept orders for future shipment. This condition makes it very difficult for wholesalers to do business, and of itself is a good defence of the practice of putting lumber in transit.

Next year will probably be a very good year for the mills; but a rather difficult year for the wholesalers, especially the Canadian wholesalers who must compete with American buyers who are willing to pay any price that will procure lumber for them, and to pay

for it in American funds, which means a premium of from \$2.00 to \$4.00 per thousand added to the already high price.

Our plans for the coming year have not yet been made, but it would seem necessary that we secure the stock of two or three mills which we can handle, although it does seem hazardous to contract for lumber for delivery over the period of a year based on such high prices as now existing.

A frank survey of the situation as you find it in your territory will be of material assistance to us in the forming of our plans. Will your trade pay \$48.00 for No. 2 fir shiplap and boards? \$75.00 for F. G. flooring and V Joint ceiling? and \$90.00 for E. G. flooring? Stocks of pine and spruce in Eastern territory are reported to be low, but to what extent have they been reduced, and are their prices on a par with ours? What are the prospects for building houses and factories in Ontario next year, and do you think it wise to contract for mountain and coast stocks on the present prices?

Nova Scotia Lumbermen Had Good Year

B. H. Dunfield, managing director of Dunfield & Co., Limited, lumber exporters and dealers of Halifax, N. S., and St. John, N. B., in speaking to the "Canada Lumberman" regarding the position of the lumber situation in Nova Scotia said:—

The output during the past season was somewhat above the average owing to the fact that large Government orders were taken early in the season, which stimulated the production. This Government stock is largely piled at the railway stations and mill yards yet. It is understood it will be largely shipped before spring. Aside from this stock, quantity of lumber on hand to-day is very small. Local demand is good and recently quite large shipments were being made to the States, mostly by rail. Lath are all shipped, and we doubt if a single carload could be procured in the Province to-day.

The demand for hemlock boards has been good and stocks are getting very low. On the whole 1919 has been a good year for the manufacturer, and preparations are now being made for the new cut, but on a smaller scale than 1919. Shipments to the United Kingdom were made during the summer and early fall mostly by new tern schooners built in Nova Scotia, but since September very little has gone forward owing to the prohibitive rate of ocean insurance on sailing vessels, and the low rate of exchange. Recently some liners running from Halifax to Liverpool, London, and Manchester have taken forward parcels of hardwood planks, in 2, 2½, 3 and 4 inch, which has found a ready market.

The labor question has improved to a marked degree and woodsmen are now quite plentiful, but wages are about \$10 per month higher than last year.

Record Lumber Cut in New Brunswick

New Brunswick's lumber cut may exceed all previous records of the province according to the announcement made by officials of the Department of Lands and Mines.

Reports have been received from twenty-nine forest rangers and they estimate the cut of logs in their districts at 228,000,000 feet and there are thirteen other rangers whose reports have not yet been received. When all the reports are received it is expected that the cut will exceed 300,000,000 feet. The record cut was reached about ten years ago when the cut amounted to some 307,000,000 feet, and it is predicted that with good weather this season the record will be passed.

Last year the cut amounted to 202,000,000 feet of sawlogs with about 19,000,000 feet of poles, ties, pulp, etc., bringing the total cut up to 221,000,000 feet. This year the cut will probably be over 300,000,000 feet and it was said at the Department of Lands and Mines that the revenue from stumpage alone would amount to upwards of a million dollars.

The preponderance of ignorance killed a proposition to raise money for good roads, voted on by the people of Texas last month. Had every lumber dealer in Texas been busy working in favor of this project, as he should have been, this continued reproach would no longer have been upon the people, says an exchange in the lumber field.

Conditions in Old Country Improving

C. W. Wilkinson Returns from Visit to British Markets
—Business Outlook is Encouraging

C. W. Wilkinson, Toronto, Ont.

C. W. Wilkinson, of the Union Lumber Co., Ltd., Toronto, returned recently from a six-weeks' visit to the Old Country where he went with a view to looking into the export situation and attending to some private business. Mr. Wilkinson came home on the Carmania of the Cunard line, which was rammed by the U. S. freighter "Maryland" off Cape Race about 8 o'clock on Wednesday night, December 10th. A thick fog prevailed at the time and the Cunarder was proceeding at half speed through a relatively calm sea when the impact occurred. The starboard side of the Carmania was scraped, four portholes smashed in near the stern bow, the rivets ripped off and the plates bent above the line of the main deck over an area of approximately 250 square feet.

There was considerable excitement on the vessel at the time but no one was injured although a number of women became hysterical and several fainted. The last day or two the trip was very rough.

Touching upon conditions in the Old Country, Mr. Wilkinson said that building operations had not yet got under way but manufacturing was gradually being resumed in all lines. Practically all commercial efforts in this direction had been suspended during the war, as every plant turned attention toward munitions or supplies for the army. While there was considerable labor unrest, the trend of affairs seemed now to be in the direction of reverting to a peace footing much more rapidly than during the first few months of the year. It was expected that 1920 would see renewed activity in the structural line. Mr. Wilkinson stated that he did not have time to make any calls on the timber merchants and wholesalers but found that all stocks were very low with the exception of spruce, of which there is a considerable quantity on hand. The Government still has a limited supply of white pine, and for this there is an active call. White pine is regarded with much favor for window sash, doors, tables, shelving and many other lines of household use.

Mr. Wilkinson stated that he had heard splendid reports of the excellent propaganda work which had been done by Mr. A. C. Manbert during the time that the Ontario Lumber Commissioner was in Great Britain. The white pine of Canada was well known and a brisk demand awaited it as soon as shipping and other conditions were propitious.

"There is great congestion," added Mr. Wilkinson, "at the ports of London and other importing centres, and the condition seems to be worse instead of better. The quays are piled high with goods and fresh boats arrive with quantities larger than are being piled away. Ocean freight rates are still heavy, and while there is greater accommodation in the matter of tonnage for commercial purposes than there was many months ago, the close of navigation at Canadian ports and the congestion at the various cities in the Old Country have practically suspended the timber export business for some months, but, judging by present indications, a trade of gratifying proportions should develop early in the spring."

Completing New Mill at Paudash Lake

The Bancroft Lumber & Manufacturing Co., Limited, whose headquarters are at Bancroft, Ont., are building a new mill at Paudash Lake, nine miles west of Bancroft, Ont., in Hastings County.

They are installing a double cut band saw mill and other machines for making flooring, siding, cornice stock, ship lap, shingles and lath. The stock will be well manufactured. The mill will be one of the best equipped ones in that section and although they were late in starting the company have the mill nearly completed and a good cut of logs out. They expect to start operating as soon as the weather permits. D. W. Avey of Detroit, Mich., President of the Company, has been in the business for years in Detroit. He manufactured wood split pulleys and interior finish and held an interest in the Avey Bros. Lumber Co., at Kennaway, Ont. He has, however, resolved to devote all his time to the planing mill end of the business

as he has had long experience with the building trade in Detroit and understands its requirements.

The Vice-President of the company is D. A. Davis of Windsor, Ont. He possesses a wide insight into the manufacture of lumber. Mr. Davis was a stockholder and manager of the Harcourt Lumber Co., until the limits were sold out and has been in the saw mill and woods end of the lumber game since his boyhood days.

E. S. Hubbel is secretary and with his brother has been doing business under the name of Hubbel Bros. They have been engaged in the manufacturing of lumber for several years and have been successful. They purchased a large limit of the Rathbun Company, Deseronto, consisting of over fourteen square miles, which has been bought by the Bancroft Lumber & Manufacturing Co.

U. A. Hubbel is treasurer of the organization, and is an experienced man in the lumbering line, having been in the business for twenty years. He takes an active part in the woods end and will look after that branch. Mr. Hubbel is well known in the vicinity, having served the people for seven years as Reeve.

With the timber limits they hold, the mill they are installing and the experienced members taking the active part they do the Bancroft Lumber and Mfg. Co. should enjoy a prosperous and productive season.

Pertinent Pointers for the Busy Yardman

No building is too small to be architecturally correct.

Too many people are digging for oil, and not enough of them digging ditches, planting potatoes, and building homes, for the good of this country.

If a fellow could hit the bullseye every time, there would be no fun shooting.

The merchant who does not exercise his jawbone systematically, intelligently, and efficiently, never gets anywhere.

It is a distinct weakness to declare that you cannot make sales in the face of high prices. You can. Your customers want buildings, and they are willing to pay what they are worth.

If the earth were covered with flowers the year around, the bees would get lazy.

Take your work as a tonic and not as an anaesthetic.

Set it down as a fact to which there are no exceptions, that we must labor for all that we have, and that nothing is worth possessing or offering to others, which costs us nothing.

The very best and most efficient way to sell lumber, is to sell it in the shape of a garage, a home, a barn, or some other completed structure.

Don't permit your local trade to search for the best place to get building information with their eyes shut; keep something before their vision to remind them of you.

Good luck has a favorite way of lighting on the shoulder of the fellow who comes to meet it.

Still Another Mill to Their String

The Fraser Companies, Limited, have added another to their list of saw mills in New Brunswick and Quebec, making a total of eleven mills which they now own and will have in operation. The latest mill which they have acquired is that which the Hammond Lumber Company, of which A. E. Hammond, of Van Buren, Maine, is president, recently purchased at Notre Dame du Lac, Quebec, a small town on the Temiscouta Lake some twenty miles north of Edmundston.

Travelled Many Miles to Prove Innocence

Tramping his way through muskeg and forest, across mountains and ridges, over rivers and creeks, walking by forced marches, Joseph Godbout, a sturdy lumberjack of St. Georges, Beauce, P.Q., but at present foreman in the camps of the John A. Morrison Company, away up in Maine, arrived in Jackman, Maine, for the sole purpose of proving he had nothing to do whatever with a recent murder.

He said he had tramped his way to civilization just to show himself and find out who started the talk that he had something to do in connection with the recent murder of Nelson W. Bartley, hotel-keeper at Jackman, who was murdered in the bush.

Godbout had a quarrel with Bartley some time ago, and when the dead body of the latter was found hidden beneath the tree trunk in the woods close to the Quebec border, people recalled the dispute between Godbout and Bartley, and some hinted that Godbout may have had some knowledge of the crime.

Godbout heard of this talk about him so decided to hike it back to Jackman, starting from the head of the waters of the St. John River, that he may prove he knew nothing of Bartley's death.

Quebec City Getting Ready for Big Meeting

Active Local Committee Appointed with Sir William Price as Chairman—Cordial Welcome Assured all Visiting Lumberman on February 4 and 5

Every arrangement is progressing splendidly for the Twelfth Annual Meeting of the Canadian Lumbermen's Association, which will be held in Quebec on Wednesday and Thursday, February 4th and 5th. Quebec is doing all in its power to give the visitors from all parts of Canada an enthusiastic reception, and recently a gathering of Quebec lumbermen was held at which there was a most representative attendance.

Sir Wm. Price has consented to be the chairman of the local committee, and this, of course, means there will be no sparing of effort in order to make the coming convention the most successful and outstanding of any that the organization has ever held. An active committee, consisting of the following, has been appointed:—Col. Walter J. Ray, Major H. R. Goodday, C. V. Norris, R. Quirouet, G. J. Staton, H. R. Van, A. G. Auger, John Levie.

The meeting of the Canadian Lumbermen's Association will be held at the Chateau Frontenac, and the usual banquet will take place

tion was launched. Gordon C. Edwards of W. C. Edwards & Co., Ottawa, was the first president, and held office until January 1910. The next president was J. B. Miller of the Parry Sound Lumber Co., now of Toronto, who filled the chair most acceptably for two years. The third president was Alex. MacLaurin of the St. Maurice Paper Co. and Campbell MacLaurin Lumber Co., Montreal, who directed the Association until January of 1914. During the succeeding two years Hon. George Gordon of George Gordon & Co., Ltd., Cache Bay, was the presiding officer. He was followed by W. E. Bigwood of Graves, Bigwood & Co., Toronto, and in January 1918 the present incumbent, W. Gerard Power of the River Ouelle Pulp & Lumber Co., St. Pacomie, was elevated to the presidency. Practically every presiding officer has discharged the duties for two years, and it is the intention of Mr. Power to retire at the forthcoming meeting. He will be succeeded by Dan. McLachlin of McLachlin Bros., Arnprior, who is one of the present vice presidents, the other being Walter C. Laidlaw of Toronto, who is in line for the first vice presidency.

Many matters of moment will come up at the forthcoming gathering when reports of the different standing committees will be presented and important action taken on many problems, which are now engaging the attention of the lumber industry in the matter of production, sale and distribution.

Many Annual Meetings of Lumbermen

The annual meeting of the Lumbermen's Section of the Toronto Board of Trade, of which A. C. Manbert is chairman, and W. J. Lovering vice chairman, will be held on Wednesday, January 7th, in the Council Room of the Board of Trade at 2 o'clock. Officers for the coming year will be elected, reports presented, and other matters of interest that may arise will be discussed.

The annual meeting of the Lumbermen's Credit Bureau will be held on Friday, January 9th, at 2 p.m. in the Council Room of the Toronto Board of Trade. It is expected that there will be a large and representative attendance. Many items of importance will come up, the officers for 1920 will be elected, the work of the past year reviewed and plans prepared for the coming season.

The annual session of the Wholesale Lumber Dealers, Inc., will be held on Friday, January 9th, in the evening, when the work of 1919 will be reviewed and the program for 1920 lined up.

Heavy Adverse Balance of Trade

The premium on the Canadian dollar in the United States continues to vary owing to the heavy adverse balance of trade against Canada, and many papers are pointing out that the surest and most effective way of providing an equilibrium in the comparative status of the Canadian dollar with the American one is that more people in the Dominion should purchase goods at home and patronize Canadian manufacturers and products. It also urged that Canada should become a greater exporting country, and less of an importing one. There is little fault to find in regard to the importation of lumber, as a recent return shows that the imports from the United States to Canada at the end of the fiscal year 1914, was in lumber (including hardwoods) \$116,000,000 and in 1918 \$9,500,000.

Handsome Historic War Calendar

The McGibbon Lumber Co. of Penetanguishene, Ont., have sent out to their friends in the trade a large and decidedly attractive calendar, entitled "Holding the Line. The scene is a reproduction from the original painting by Harold M. Brett, who is a well-known New England artist. His story-telling pictures, many of them of an historic nature, have been widely published. "Holding the Line" depicts most vividly and clearly the stand made by Col. S. Carey, Commander of the Brigade of British Artillery who undertook the task of closing the gap between the British 3rd and 4th Armies at the time the Germans made their great drive in March, 1918. Col. Carey and his fighters hatled and eventually turned back the Germans, and no more heroic action has ever been told in story or song.

National Retail Lumber Dealers' Association of Detroit, Mich., have sent out to their members and friends a handsome Yuletide greeting card of a dainty design.

Sir William Price, Quebec,
Chairman of local reception committee

H. B. Poliwka, Quebec,
Local member of C. L. A. executive

on Thursday, February 5th. The local entertainment committee has undertaken to provide plenty of entertainment for both ladies and gentlemen during the convention days and nights and has promised that there will be no lack of special attractions for the ladies. The Chateau Frontenac will be thrown open and their arrangements for skiing, skating, sliding, curling, snowshoeing, etc., will be available for all visitors to the forthcoming gathering of the Canadian Lumbermen's Association.

It may be interesting to state that the Canadian Lumbermen's Association, which was formed twelve years ago, has enjoyed a most successful history. The beginning was small but the interest has rapidly developed and this federation has now become a nationally-known organization. The membership has grown rapidly and at the last annual meeting held in St. John, it was shown that 128 progressive wholesalers, exporters and manufacturers belong to this outstanding body. At that time Ontario had 64 members, Quebec 36, New Brunswick and Nova Scotia 18, while the Western provinces made up the remainder. At the St. John meeting 21 directors were elected, 10 from Ontario, 6 from Quebec, 4 from New Brunswick and Nova Scotia and 1 from Manitoba, Saskatchewan and British Columbia. The directors who will retire this year are H. B. Poliwka, Quebec, W. T. Mason, Montreal, James G. Cane, Toronto, Duncan McLaren, Toronto, W. J. Bell, Sudbury, B. H. Dunfield, Halifax, and Arch. Fraser, Edmundston.

All the meetings of the Canadian Lumbermen's Association were held during the first few years of its formation in Montreal and Ottawa. In 1917 the convention met in Toronto and in 1918 in Montreal and in 1919 in St. John. The latter session was one of the most enjoyable, thoroughly representative and enthusiastic ever held, and from present indications it would appear that the Quebec assembly will be productive of equally satisfactory and widespread results.

It was in August 1908 that the Canadian Lumbermen's Associa-

The Spirit and Ideals of Public Service

Men Make Real Progress Through Open Dealing—How Efficiency in an Association is Best Obtained—Individual Responsibility

*By W. H. Alderson, Toronto, former President of Rotary Club and Second Vice-President of Board of Trade.

Most organizations build themselves deliberately on a recognized platform.

The selection of a member to participate in the deliberations of such organization, association, club, or Board of Trade, is an expression of the confidence of the club in such member and of its good-will toward him. As his business is an expression of himself he is expected to represent his business, not submerge it, and by so doing he reaps such benefits as naturally and properly flow from an enlarged acquaintance and from the recognition of his efficiency and integrity, of which his selection to membership is evidence.

Membership is both a responsibility and a privilege. If the one is met, and the other is used, by each member, the result will be the effective direction of the vitality of commerce towards progressive efforts for good.

Long ago Confucius said, "What you do not like when done to yourself, do not do to others." This scarcely suggests service, but it was kindly. In the Old Testament they taught, "Cast thy bread upon the waters: for thou shalt find it after many days." This suggests action, generosity, and a sort of blindfold service.

Then our Saviour gave us the Golden Rule of life, "As you would that others do unto you, do you even so to them." Selfishness is wiped clean out of this, and religiously this command has actuated millions.

Broad Highways of Open Dealing

Individual selfishness is wretched enough; organized selfishness is utterly repugnant. Men make real progress in business along the broad highways of open dealing, not through the alleys of unearned preferment.

The men who have caught the spirit of "Service not Self," men who have for their motto, "He profits most who serves best," men who reach out their hands to each other, confident in the same ideals of business and spirit, come naturally to express their highest and best selves.

The primary object of any organization should be to prepare its members for a higher and more efficient service. What greater love for our fellow men can we display than to spread the gospel of service, demonstrating to our members that service is life's highest ideal, and that he who receives without rendering full service in return, receives either as a thief or a beggar. We should all strive to make each of our respective communities a better place in which to live and a better place in which to make a living.

Our responsibility to the world is great. Let us not shirk it or treat it lightly. Let us not hew to the line implied in the oft repeated slander, "Scratch my back and I'll scratch yours," but rather to the line or principle, "Scratch my back and yours will be scratched," or as you render good unto others so will good be rendered unto you, a law as natural, true, fixed, and inflexible as is the law of gravitation. It is a law that in its results is simply a sequence of the consistent practice of the Golden Rule.

Self Seeking Strength is Weakness

Since my boyhood days I have realized that strength not used for the services of others, and exhibited only in self-seeking, is after all a weakness; that the indomitable character of the great Napoleon is not one to be emulated now.

"He profits most who serves best" is the motto or subject, and I shall endeavor to deal with two phases of it. First, "The best service," and second, "The most profit."

It is marvelous what can be accomplished by persons who do not have even the possession of all their faculties, or who do not have even the blessing of good health.

Just opposite the Broad Street Station in Philadelphia there is a statue of Stephen Girard, bearing the inscription by which he delighted to call himself, "Mariner and Merchant." There have been many dark things said concerning his character and doings. He has been accused of engaging extensively in the slave trade under conditions by no means creditable. He has been condemned as a hard-hearted money-seeker. His appearance and actions were odd. He had but one eye, which rendered him the subject of ridicule by the children of his acquaintance in his earlier days, and which throughout his life affected his disposition and rendered him a less

approachable person. However, when they asked for volunteers for nurses in the smallpox epidemic in Philadelphia, he was the first one to go forward to volunteer. Other heroic deeds are credited to this one-eyed, eccentric man, who also founded an institute in Philadelphia.

It would be far too long a task to enumerate the names of persons who have accomplished great things despite the limitations of their opportunities, and with little assistance from others. It might almost seem that limitation inspires superior qualities in men and brings out the best in them.

If such service can have been rendered to the world by those who labored under such disadvantages, how much greater service may be rendered by those who are in possession of physical qualities and mental equipment suitable for the accomplishment of labor.

Nothing More Honorable than Service

There is nothing more honorable than service. All of us must pass our lives in the performance of it, and each of us must strive to do the best he can in the particular line of work in which his efforts may be best.

If in the future those things which we may now do may be more excellently done, nevertheless if we have done the best that it is possible to do in our own age, it will be a fine thing for all time.

The construction of some small canal was no less a notable feature in the world's progress because of the building of the greater Panama Canal. The first steamboat which crossed the ocean was a landmark in the history of development even though it would seem a very crude thing in comparison with the great dreadnoughts and superdreadnoughts of to-day.

The most that is expected of anyone is that he shall serve the best in the line that he has chosen. If he gives any less service than the best of which he is capable, it would be a dishonorable thing of which he could in no wise be proud.

If the manufacturer turns out a shoddy article he soon gains the reputation for a shoddy thing, and his standing among his fellow men and particularly in the community in which he lives can never be one of which he would be proud. If the physician who knows he is to operate feels that he has not had the experience or does not possess the knowledge to perform the operation, and yet does it in a way that is not worthy of his profession, he must lower himself in his own eyes as well as in the eyes of all of us. So through the whole of human life, if a thing is worth doing, it is worth doing well.

The Expression of Every Day Honesty

Above all things we should encourage honesty in our lives and actions. One often wonders what the person who professes much religious fervor on Sunday and practices no religious honor on Monday must think of himself. It is not difficult for us to know what we think of him, and it is not very difficult for us to form an estimate of what in our judgment the great Supreme Ruler of the universe must think of him. If a person is to perform service toward his fellow men he must perform it every day and all the time. It must not be confined to just a few occasions and just a few instances.

The service which should be the aim of every member of an organization is the very best service to the community or industry in what he does for the people of the community or the industry. It should be the aim of an association to see to it that every person who is a member of it is giving honest service and conducting his business or profession in an honorable manner, and that he is doing so far as possible his share of the work for the welfare of the many in his community or his town or city.

He should always remember that "the proper study of mankind is man," and he should endeavor to understand his fellow man in order that he may be able to do for them the things which they need. It may not be very material assistance; it may be just a bit of encouragement, the "cup of cold water," but sometimes even a little given in a kindly way and at a timely season, will be the turning point in someone's career.

Honest Wares of Highest Grade

Sometimes when I look out of the car windows while travelling and see the smoke coming from the chimneys of the many factories and mills, it is a gratifying sight. It means prosperity and wealth.

*Address delivered before the Wholesale Lumber Dealers Association, Inc., of Toronto.

The service which has been rendered by the manufacturers of Canada has been a great one to the citizens of the world. The wares which are manufactured in Canada are in most instances recognized as honest wares of the highest grade. The very competition which exists in other countries exhibits this fact.

In conducting our manufactures our citizens have given a great deal of their intellectual energy. It would be gratifying if we did not stop here, but if we continued to strive even more to add the power of intellectuality and to increase the fulness of our lives.

The aim of the members should be that sort of service which comes from a healthy and active body. It should be practically the three-fold development, in each individual, of the mind, the body, and the spirit, which is the aim of the Christian Association, and that applied strongly to the service of others.

If a person has developed himself physically, intellectually, and morally, and has developed a liking for the production of the finest articles or the most superior work of which he is capable, the profit cannot help but follow.

The Bearing of Self Respect

It is a physical principle that the exercise of muscles develops and strengthens them: so likewise does the dwelling upon fine thoughts develop and strengthen and uplift the mind; so does the knowledge that one is doing good service give that bearing of self-

respect which comes unfortunately to too few of us.

By the methods which I have endeavored to outline, there is an effort made to round out a man so that he shall become well-formed and capable. This is one of the greatest profits which can come to him. One member gains the point of view of another member; he has a friend to whom he can go for information concerning those things about which he does not know. He can become better informed and, therefore, better capable of splendid service. By the joining together of forces of many men in many lines of activity, a great power for the betterment of civic life can make itself felt.

Under these circumstances, we may well say as a summary, that the aim of any organization should be that each member should give the best service of which he is capable. In so doing he will profit himself and his city by gaining greater strength and greater prestige, and a higher personal and civic development and satisfaction.

An association should be no sordid thing where one member should seek to gain material things from the other. It should be above that. Each member should strive with all that is in him to develop himself in order that he may have the most lasting and enduring satisfaction, and in order that people may say of him when he is gone, "He has fought a good fight," never forgetting what Lord Nelson said: "England expects every man to do his duty."

How the Yardman Can Increase His Business When Market is Advancing Sales Should be Made on Basis of Current Prices Rather than What Material Cost When it was Put into the Yard

The matter of lumber prices at the retail yard is one of importance to the dealer, particularly at times like the present, when there is a change every few days. But the matter of prices per thousand ought to be no concern of the consumer. With the contractor it is impossible to get away from quoting per thousand prices, for he bases his bids for construction on the per thousand prices he will have to pay for the materials, says a writer in the "Mississippi Valley Lumberman."

When it was the common thing for retail dealers to quote prices to everybody in this manner, and more especially a number of years ago, it was almost necessary for the yard man to establish his prices for the year early in the spring, and he rarely changed them during the building season.

Farmers were a jealous lot—and they still are. So, if the dealer sold material to one farmer for a certain price, the news would spread, and the next customer would not expect to be charged any more for it. If the dealer made the attempt, he was immediately in trouble.

During recent years the retail trade has been getting away from the idea of quoting prices by the thousand, and, as I have said before, they are not quoting lumber prices at all. The exception to this is where a single price, or a small number of pieces, are wanted.

Giving a Price on the Whole Lot

The thing to do now is to find out what the buyer wants, figure out the kind and amount of material he will need, and make a price on the whole lot. As it is a rare thing for two jobs to require just the same kinds and amounts of material, the dealer has gotten away from the price per thousand feature, and away from trouble at the same time.

With prices changing as they have been doing for the past few months, it is not possible to make the same estimate for a certain building now that was possible a few weeks ago, and all sales, particularly when the market is advancing, should be made on the basis of current prices rather than on what the material cost when it was put into the yard.

Some of the line yard concerns employ people at their headquarters to figure out the prices with which their yard managers should work, and when the market prices are changing constantly, this is done every time there is a change. Most of these concerns have their headquarters in large centres, where they are in constant touch with the market. The individual yard owner may not have the facilities for getting this information as quickly, but he does receive almost every day, changes in quotations from manufacturers and wholesalers, and he should pay close attention to these. Whenever there is a material change in the market, whether it is up or down, he should take note of it and base his figures on sales on the market at the time he figures his bills.

The yard owner may think that when prices in the lumber mar-

ket drop by a considerable amount, he can go on selling at the old price, thus making a little more profit. But if he is in competition with a line yard concern that follows the market, he will lose business.

On the other hand, he may figure his stock at cost, whenever he gets it, and add the percentage which he knows will cover the cost of his operations; but he should always figure this advance on all the stock on hand, regardless of when he bought it or what he paid for it. This is merely good merchandising.

Assuming that it is the purpose of every dealer to give service to his customers, he should make good on this purpose. If he advertises service, and does not give it, he is taking money under false pretense.

Many line yard concerns maintain a force at their headquarters offices to figure out estimates and make plans, but the yard manager, and the yard owner, can do a large amount of this detail work, and he ought to do it.

Should Have a Room for Customers

Every retail yard office ought to have a room for customers, and this room should have the kind of equipment that will help build up business. If the yard is operated by an individual owner, the equipment of this room will have to be more varied than if it is one of a line of yards. Much of the work that is done at the headquarters of the line yard concern must be done at the yard of the individual owner.

A part of the equipment of this office should be pictures, or drawings, of various types of buildings, with plans for each. The dealer should be able to figure estimates from the plans, and, as I said before, these estimates should be based on the current market price, plus the percentage added for operating costs and profits. When you give a man an estimate on the cost of a certain building or repair work, tell him it is for acceptance at the time, as the market may change if he holds off for too long a time.

The various large number associations and a good many of the large concerns selling building material have departments whose work it is to give aid to the dealers who handle their goods, and the amount of assistance the dealer can get from them is almost unlimited. Do not be afraid that you will be "spronging" on them if you ask for this service. They are not giving it out of charity, nor are they philanthropic concerns. They may not charge you anything for this help, but they know it pays them. Everything they can do to increase the volume of sales of the retail dealer means a larger sale of their products, and while this service may seem like a big thing to the dealer, it is really a much bigger thing for those who furnish it.

Of course, the retail associations also have systems of plan service, and every dealer who has not the facilities for doing this work

himself, or whose business does not warrant the expense, should get his association service.

Making Callers Think of Building

Your "customers' room" should be comfortable and attractive. It should have an atmosphere that will make people think of building. A few well selected pictures of various types of buildings should be neatly framed and hung on the walls, and there should be a table on which are trade papers and architectural magazines. The psychological effect of these things is greater than most people think. There are very few people who are not attracted by pictures of buildings, or reading matter about buildings. Every man or woman who expects or hopes to own a home will be advanced toward the stage of actual building if attention is directed along those lines. Every man or woman who already owns a home is a potential customer for something that will improve that home or add to its conveniences and comforts.

You want to make people want to do business with you, and to do this you must make it easy. If your yard is on a well-traveled street, or if there is considerable traffic by your door, have a show window in front that will attract attention. Some good pictures of buildings right up against the glass of a large front window will make people stop and look. In season you can have small models of various things made of building material and placards calling attention to something seasonable in the way of buildings or improvements. And change them frequently.

Most of the buying for line yards is done at headquarters, but the managers of some systems are given some latitude in this matter, particularly if they have shown ability along that line—and all individual retail yard owners do a large part, if not all, of their buying from the salesmen on the road.

You don't think much of a salesman whose methods you do not approve and whose personality is not attractive. But, put yourself in the salesman's place and make a guess at what he thinks of you—and why.

There are some salesmen—a very few—who try to make volume of sales regardless of the real needs of the customer. Such salesmen do not hold customers. There are other salesmen, and they are in the large majority, who are always fair, and while they draw their salaries from the manufacturer or wholesaler, they are always solicitous for the welfare of their customers. And you can trust most of them absolutely.

Putting the Salesman on His Honor

I know of a manager of a line of yards who never quibbled with a salesman over the price of what was offered. He made out his list of stocks needed and turned them over to salesmen with the understanding that he would be taken care of and that he would not be charged more than the stuff was worth. When you put the average salesman on his honor, you need not fear that you will not be fairly treated. If you ever are not given a square deal, it is all off between you and the man who has treated you in this manner. This manager that I speak of never got the worst of it, and the salesmen who knew he trusted them would go out of their way to offer him any bargain they had.

The dealer who is always trying to beat the market gets a reputation among the salesmen which will lead them to work just as hard to get the better of him, and I believe they have the advantage—the greater opportunity.

There may have been a time when there was a constant battle of wits between the retail dealers and the traveling salesmen; but with a few exceptions, that class of dealers and that class of salesmen have disappeared. Both are now business men, in the best sense of that word, whose relations are pleasant, but business-like. Neither asks favors of the other; but, because of mutual confidence and respect, each is ready to grant the other a legitimate favor without expecting something in return.

A very few salesmen believe that they can get business by "knocking" the goods and the methods of competitors. I do not believe that the average employer of such salesmen approves of that kind of conduct; but there are also a few employers who will do the same thing, and that kind will employ salesmen who are knockers.

Buy from Reputable Mills and Wholesalers

I never bought lumber from a salesman of that character, and I never will. Criticism of others is too often used to cover up one's own short-comings, and the man who continually tries to depreciate what others are doing ought to be watched.

I believe that an employer who has goods to sell, and the salesmen who represent him, ought to boost their own stocks; but that it can be done without making comparisons with the stocks of others.

A possible exception to this is the case of the manufacturer or wholesaler who is a known flim-flammer. A few such exist, and their methods ought to be known, even if there is a chance for being misunderstood when their characteristics are told. A really good

merchant owes it to his customers to protect them from such dealers.

I have always found that it pays to buy lumber from reputable mills and wholesalers who make an effort to fill orders the way the buyer wants them filled, and who, when they are unable to do so, will ask the consent of the buyer before they make changes.

In these times, when stocks are scarce, it is often necessary to substitute for some items that are scarce, and the reasonable buyer will accept such substitutions, but he likes to know they are to be made, and does not care to have the shipment come through quite different from the way he placed his order without having been notified and told the reasons for the changes.

The Possibilities of Wood Distillation

The distillation of wood with recovery of bye-products appears destined to extend considerably in countries where suitable wood is grown, and in which skilled direction is available. The products are likely to increase in demand, and the price obtained should yield a good return where the conditions are favorable.

The chief countries in which this industry has been carried on hitherto are North America, France and Germany, but India, Scandinavia, Australia and New Zealand appear to offer scope for development.

The initial process is to heat the wood in a closed chamber or retort, thus producing charcoal, whilst the volatile part passes over to a still in which some is condensed into a dark brown liquid; the rest, a combustible gas, is generally used for burning under the retorts. The charcoal, if of suitable size and quality, may be used for iron smelting, and in special cases the possibility of the manufacture of calcium carbide should be considered.

The retorts may hold up to 30 tons of wood at one charge. They are usually in the form of horizontal cylinders, into which trucks on wheels carrying the wood are run, the doors then being closed and the whole heated for 24 to 48 hours. The trucks are then removed while the retorts are still hot, and run with their charcoal into another iron cylinder, of the same size as the retort, in which they are cooled.

The dark brown liquid is allowed to stand and separate into layers. The middle layer, known as crude pyroligneous acid, is composed of water, acetic acid, methyl alcohol and tarry matter, with small quantities of other substances. The upper and lower layers form wood-tar, with a certain amount of acetic acid and other impurities. At this point the process diverges into two parts.

(1) The crude pyroligneous acid from the middle layer is distilled fractionally and produces:—(a) wood spirit or methyl alcohol, which is used as a denaturant of alcohol, and also for making varnishes. In suitable cases a further product, formalin, can be produced by passing the vapor with air over heated copper; (b) crude acetic acid, which forms the second fraction, may be neutralized with various bases to form sodium acetate, calcium acetate (the "grey acetate of lime" of commerce) or the acetates of copper, iron, aluminium or chromium, which are used in the dyeing industry; (c) there remains the third fraction, the tarry residue, which is usually burned. The sodium acetate and grey acetate of lime may be further treated with sulphuric or hydrochloric acid to produce acetic acid which is of great importance in the arts, notably in the manufacture of India rubber. As an alternative, these acetates may be used for the production of acetone, a solvent which has important industrial uses.

(2) To return to the crude wood-tar. This on distillation yields acetic acid, light wood-oil and wood tar. The last named is passed into a still and heated to 230 degrees Centgrade, splitting up into heavy oils and wood pitch. Further treatment of the heavy oils with caustic soda yields creosote oils.

The process for manufacture of "brown acetate of lime" from the crude pyroligneous acid need scarcely be referred to, as all evidence points to the need for the development of the process for systematic production of ultimate products rather than stopping operations when a crude product has been obtained. The method most favored is to commence with a simple process and to develop successively along lines that promise the best commercial return for the products, dovetailing in such further processes as appear to be desirable.

Two types of wood are distilled, hard woods, such as oak, elm, beech and birch; and resinous woods, such as pines and firs. The soft woods do not yield sufficient bye-products.

As a side line to the lumber trade, using the wood not suitable for the ordinary uses to which timber is put, the process of wood distillation appears to offer considerable advantages.

The names of United Kingdom manufacturers of wood distillation plant can be obtained from the British Trade Commissioners in Canada.

New Wholesale Lumber Firm Formed

Rose-McLaurin Limited Will Handle Native and Western Woods—Principals are Popular

Rose-McLaurin, Limited, with headquarters at Lachine, Que., is the name of a new lumber organization which has recently been granted a federal charter. The company has an authorized capital of \$100,000 and the active members are Arthur L. McLaurin, Lachine, Que., and Hugh A. Rose of Toronto, both of whom are well and worthily known in the lumber arena.

The executive offices of the company will be at Lachine and will come under the direction of Mr. McLaurin, the president, while Mr. Hugh A. Rose of Toronto, vice-president and managing director, will look after the purchasing and selling end and will continue his offices at No. 2 Toronto St., which until recently have been leased by Mason, Gordon & Co. of Montreal, with whom Mr. Rose has been associated for a number of years.

Mr. Arthur L. McLaurin, Lachine, the president of the company, comes from a lumbering family, his grandfather, father, uncles, and brother, being all in the same line of business. Born in Ottawa, Mr. Arthur L. McLaurin is the second son of Mr. Alex. MacLaurin, of the St. Maurice Paper Co. Ltd., with which his brother, Mr. J. P.

Hugh A. Rose, Toronto, Ont.

Arthur L. McLaurin, Lachine, Que.

MacLaurin, is also connected. After leaving school he spent two years in Montreal, and then removed to Charlemagne, P. Q., where he entered the service of the Charlemagne and Lac Oureau Lumber Company, and gained experience in the yards, office, and woods. From there he returned to Montreal, as secretary-treasurer of McLaurin Bros., Limited, wholesale and retail lumber merchants, sash and door manufacturers, and also specializing in the manufacture of telephone and telegraph cross arms and wire and cable reels. The office, yard, and factory are at Lachine, just outside Montreal. The business was then under the direction of Mr. Wilmer T. McLaurin, an uncle of Mr. Arthur L. McLaurin. In 1911 the former went into business on his own account, under the name of the McLaurin Lumber Company, on St. Catharine Street East, Montreal, still, however, retaining his interest in McLaurin Bros., Limited. He was succeeded in the management of the latter company by Mr. Arthur L. McLaurin, who also, on the death of his uncle, took over the management of the McLaurin Lumber Company, which was incorporated in 1918.

Mr. Arthur L. McLaurin is a nephew of Mr. John R. McLaurin, president of the C. C. Isley Lumber Company, Cimmerson, Kansas, who is also connected with the Lake Superior Lumber Company, Ellsworth, Kansas, and other lumber companies in the United States and Canada.

Mr. Hugh A. Rose, vice-president and managing director of the new wholesale organization, will shortly leave for the Pacific Coast province on an extended trip, for the purpose of purchasing stock and forming new associations. He is an old Woodstock boy who has been identified with the lumber industry for some twenty years, getting his first acquaintance with it when he took a position as shipper in the sash and door warehouse of the Rat Portage Lumber Co. at Brandon. When fire wiped out the warehouse Mr. Rose then entered the service of A. R. McDiarmid, a retail lumber dealer of Brandon, who has just retired from the mayoralty of that city. After a few months he went to Winnipeg as shipper in the sash and door warehouse of the Rat Portage Lumber Co., and left this organization to go on the road for the Empire Sash & Door Co., Winnipeg.

At the time the Fraser River Lumber Co. (now the Canadian Western Lumber Co.) was formed with headquarters in Fraser Mills, B. C., Mr. Rose was engaged by them, being the first salesman appointed on the staff after the selection of the general sales manager, Mr. H. J. Mackin.

On the 1st of August 1907 Mr. Rose came to Toronto and opened an office at 3 Toronto St., being the first travelling salesman in Eastern Canada to devote his time and attention exclusively to the marketing of B. C. products, which now enjoys such a favorable connection in the East. It was uphill work at first but Mr. Rose persevered, and his courage and optimism eventually conquered all doubts and difficulties, and to-day B. C. fir and other lines are household words in Ontario, Quebec, New Brunswick and Nova Scotia.

In the spring of 1916 Mr. Rose entered the employ of Mason, Gordon & Co., Montreal, with a view to gaining an intimate insight into the wholesale lumber business, and eventually embarking in that line on his own behalf. He has proved himself an aggressive salesman not only of Western woods but also native and Southern stock, and in entering upon his new relations carries with him the heartiest well wishes of his late employers.

The new firm of Rose-McLaurin, Limited, will handle practically all lines of lumber and devote special attention to B. C. timber, shingles, doors, etc. They announce that they will carry on a wholesale lumber business, dealing with retail lumber dealers, railways and railway contractors, government requirements and contractors for Government work and manufacturers who use lumber in separate cars or larger quantities for manufacturing or crating, but that they will not sell building contractors within the limits served by any recognized retail lumber dealers.

Guy Long Interested in New Tractor

When Guy Long, the well-known lumberman, Hamilton, and D. L. McIntyre, of the Ellis Motor Company, Hamilton, get their tractor on the market Hamiltonians interested in machines for pulling heavy wagons are going to see one of the greatest inventions of the age. For the past month Mr. McIntyre has been working on the tractor, which will undoubtedly be known as the "Little Giant," but it was not until recently that he tested it and found it up to expectations. A wagon bearing three tons was hitched on behind the little wonder, which has a 70-inch wheel base, and it pulled the heavy load without any trouble. Later the load was increased to seven tons, but the "Little Giant" did not balk a particle at the heavy load.

The motor used is of the Ford make, and the machine is not any more than two feet in width. With the seven tons hitched on behind the "Little Giant" ran up and down John street at a rate of speed three to four times faster than a team of horses could go and with a much heavier load than many teams could pull.

Would Survey Northwestern Limits

In a statement urging enactment of his bill for a Government survey of pulp timber in the Northwest, Senator Poindexter, Republican, Washington, declared it was believed this timber would supply enough pulp to end the present shortage of newsprint paper and supply all publishers for decades to come. "If the pulp wood supply actually exists," Senator Poindexter said, "the survey will go far toward compelling Eastern paper manufacturers to abandon their claims of acute scarcity and stop profiteering."

He proposes appropriation of \$1,000,000 for the survey.

"It will be found," added Mr. Poindexter, "that newsprint can be made in Oregon, Washington and California, at a cost that will permit the product to be sold at prices far below those now being charged by Eastern mills."

Eastern Pulp Co. Under New Management

The MacLeod Pulp Co., Limited, of Liverpool, N.S., have recently disposed of their plant and limits to interests which are headed by F. J. D. Barnjum, who has been making his summer home in Annapolis, N. S., and spending his winters in the Southern States. Mr. Barnjum controls between two and three thousand acres of timberlands in Nova Scotia, and it is also understood, has considerable holdings in New Brunswick. The property of the MacLeod Pulp Co. consists of two groundwood mills with a capacity of fifty tons, dry weight, per day, and also a water-power sawmill. The company also own the shares of the Mersey Hydraulic Co., Limited, who have exclusive waterpower rights on the Mersey River and watershed, this being one of the best power propositions in the province. In addition, the MacLeod Co. have seventy thousand acres of land, timbered with spruce, pine and hemlock. Very little lumbering has been done on this area, as the MacLeod people have devoted their attention principally to the manufacture of pulp. Having made a practice of buying wood from farmers and small holders rather than operating their own lands, the original holdings of the company remain practically intact.

Canada or India — Which is Right?

The Investigation of Forest Products as Valuable Investment—
What the East is Undertaking

The visit to Montreal of Mr. Ralph Pearson, forest economist of the Indian Forest Service, is part of a generous programme of the Indian Government to secure for its forest service the best methods, appliances and expert staff.

Mr. Pearson is in charge of the department of Forest Utilization at the Forest Research Institute at Dehra Dun, and has been commissioned to visit research laboratories in the United States, Canada and Great Britain for the purpose of obtaining information on the methods of research into the nature and use of forest products, of purchasing apparatus and machinery for testing, seasoning and preserving timber and of securing the services of experts in timber testing, seasoning, preserving and other branches of wood technology. The fulfilment of these aims is a necessary part of the great development in forest research, which the Government of India is promoting.

Five years ago the Indian Government spent about 350,000 dollars on a fairly extensive forest research institute at Dehra Dun and at the time that it was erected it was thought that it would not require much expansion for twenty years. The stimulus given by the war, and especially the realization that the units of the Empire must be more or less self-contained, have brought about an entire change of ideas in India, and it is clearly seen that to advance with the times and to meet the increasing demands of the commercial world for produce from the forest a great expansion in research work is necessary in order to prove that such produce is suited to the requirements.

The result of this development of ideas is seen in the decision of the Government of India to expand their research institute very largely and, as the 43 acres of land on which the present institute stands are insufficient, they have determined to erect a new institute on 1,300 acres of land in the vicinity of the old one, which will cost at least \$2,000,000, while the staff of experts will be quadrupled, and the most modern laboratories and testing equipment will be installed.

Apart from this mission of Mr. Ralph Pearson on behalf of his department of forest utilization, the expert on pulp, the forest entomologist and the forest botanist are being sent to England to secure experts and equipment for their departments.

Importance of Scientific Investigation

Sufficient has been said above to show that India is going to possess an institute for research into her problems in forestry and forest utilization which will be of considerable importance in the world, and, whether the expense is justifiable or not, the promotion of the scheme shows that the Government of India realizes the importance of scientific investigation into a most valuable natural resource.

It would be interesting to compare the efforts of a country like India, which, in the popular mind, is ultra-conservative and bureaucratic with those of a confessedly go-ahead and democratic country like Canada.

What is Canada doing to discover the real value of her forest products?

Six years ago, under the inspiring influence of Dr. Roche, then Minister of the Interior, and in co-operation with McGill University, were established in Montreal the Forest Products Laboratories of Canada. The war has, of course, exerted a retarding influence upon the work of these laboratories, but those of the staff who were kept from going overseas in order to carry on the programme of investigations served their country loyally and did much useful work. What they did may be seen by referring to the publications issued by the forestry branch of the Department of the Interior.

But the war is over and instead of these laboratories being fully staffed and the work accelerated the work is seriously affected by the fact that the Government of Canada is unable to retain the services of many of those who kept things going during the war, as well as those who returned from overseas. These men have left the laboratories to do, not scientific research, but something far less attractive. They have mostly gone into commercial plants to control manufacturing processes, to check quantities and qualities, and to engage in a deadly routine of daily comparisons of either.

Why Should Canada Do Cheese Paring?

The reason for men giving up interesting work for less attractive employment is very simple. An artist once met an old acquaintance of the art school carrying a lead pipe; "Art didn't pay, so I chucked it and went in for plumbing," was his explanation. Research doesn't pay apparently when the Canadian Government is paymaster.

In the Indian service, however, the same view is not held. India

is willing to pay three times the salary that Canada offers for the same service.

India finds a \$350,000 institute far too small for her Forest Research Institute, and is replacing it with a \$2,000,000 institute. Canada thinks that it is sufficient to lease a private residence and garage for her forest products laboratories.

India regards the investigation of her forest products as a valuable investment. Canada seems to regard the study of her far larger resources as of little account.

Which is right? Canada or India?

Checking Spread of White Pine Blister

That the white pine, most valuable of American soft woods, can be saved, and not made extinct by the dreaded blister rust was the consensus of opinion at the international blister rust conference in Albany, N.Y., when experts from all parts of the country gathered to discuss means of stopping the spread of the infection. If proper care is taken to prevent its spread there is no reason why reforestation with white pine can be continued. Methods of treatment of the infected tree, but particularly of stopping the carrying of the spores to uninfected trees were discussed. Dr. L. H. Pennington, head of the Forest Pathology department of the New York State College of Forestry at Syracuse, told of important tests in the Essex county region, to determine the distance to which the disease could be carried, and gave his opinion that the blister rust spores were able to carry the infection to much lesser distance than has commonly been supposed thus making the protection of uninfected stands of pine much simpler. He urged that the greatest care be taken, however, to completely eradicate the currant and gooseberry bushes which participate in transmitting the pest within the danger zones. Prof. John W. Stephen, head of the silviculture department of the New York College of Forestry, told of practical investigations in Wisconsin.

Effect of Time of Cutting Timber

Many of the theories which have been advanced regarding the durability of wood attribute too much importance to the time of cutting. As a matter of fact, the time of cutting has very little effect upon the durability or other properties if the timber is properly cared for after it is cut. The method of handling posts, poles, and logs at different times of the year, however, does influence their durability.

Posts, poles and other rough products cut in late spring and early summer are more likely to be attacked by insects and fungi because the wood is freshly cut, and in the most favorable condition for attack at a time when insects and the spores of fungi are most active. Seasoning also proceeds more readily during the warmer months and may cause excessive checking. If the wood is peeled when cut and piled openly on skids for seasoning the opportunity for decay will be reduced to a minimum, but checking will not be retarded. In no case should the wood be allowed to lie in direct contact with the ground. If checking is an important consideration it can be reduced somewhat by locating piles in a shaded but dry place. The bark peels most easily in spring. It can be removed at any other time of the year, but the labor and expense will probably be greater.

Timber cut in late fall and winter seasons dries slowly and with less checking than during the warmer months, and when proper storage or handling is impracticable, winter cutting is best. Fungi and insects do not attack wood out of doors in cold weather and by the time warm weather arrives the wood is partly seasoned and somewhat less susceptible to attack. It is for this reason that winter cutting is advantageous and not on account of a smaller amount of moisture or sap in the wood in winter as the popular belief has it. There is practically no difference in moisture content of green wood in winter and summer.—U. S. Forest Service.

New Organization Will Double Production

A charter was recently granted to Murray Crawford, Limited, of Campbellville, Ont., and the new company have elected the following officers: President; Murray Crawford; Vice President, Lloyd Crawford; Secretary-Treasurer, E. D. Mahon; Directors, Hart Crawford and James K. Mahon. The new organization have taken over the lumber business conducted for many years by Murray Crawford, and the plans to be followed out will be largely along the same lines as in the past. It is their intention to manufacture rough lumber, timber, ties, posts and poles and to double their output. The company will shortly enter upon the production of lath, shingles and berry crates. A big stand of cedar is owned by them and a large cut of posts and poles will be taken out. Campbellville is located in Halton county.

Two New Administrators of Lands and Forests

Hon. Beniah Bowman,
Ontario Minister of Lands & Forests

Hon. Beniah Bowman, the new Minister of Lands and Forests for Ontario, is one of the two members of the Drury cabinet who, previous to the recent election, had sat in the Provincial Legislature. He has already created a favorable impression in connection with his recent visit to the northern part of Ontario, and been invited by the Wholesale Lumber Dealers' Association, Inc., to attend one of the regular monthly meetings in Toronto, where he will be accorded a hearty welcome. Mr. Bowman has evinced a disposition to grasp all the details of his department and approach every proposition with an open mind. For many years he has been a successful farmer and will, no doubt, become equally as capable an administrator in the Department

which he has the honor to direct. P. F. Cronin, a well-known writer of Toronto, in a recent sketch of the subject of this reference, says: Beniah Bowman has inherited with the late Bob Gamey's seat the entirely flattering nick-name of "the man from Manitoulin." Mr. Bowman was first champion of the farmers' movement on the hustings to take a fall out of the Hearst Government in a by-election. He showed no sign of vocal animation in the legislature until Widdifield arrived from North Ontario to give him countenance. When Mr. Widdifield confronted the time-honored concession to custom of a formal introduction to the Speaker he found the ceremony required two supporters, one on his right hand and one on the left. Such persons are of course supposed to be members of the political family of the M. P. P. Mr. Widdifield had but one sponsor available in Beniah Bowman. Sir William Hearst and Mr. Proudfoot saw an opportunity for grand condescension but to their surprise were declined. When the time for introduction arrived Mr. Widdifield walked up from the bar between Beniah Bowman and the late Allan Studholme. A certain benchman of Sir William's could not conceal his feelings at the spectacle presented, which to his mind, was little short of disorderly democracy, and remarked in a voice loud enough for all to hear: "Look how these fellows come into the House." Beniah Bowman before many minutes had elapsed found an opportunity to retort to the remark and made his first impression upon the contemptuous assembly. He is now acknowledged a man of parts, well read in current economics and has same practical ideas for the protection and renewal of the forest wealth of Ontario. He is one of those who hold to the necessity of a separate department of Mines, and urged it upon Mr. Drury as soon as the Crown Lands Department was offered to himself.

Hon. Mr. Bowman was, as already stated, one of the two U. F. O. members who sat in the last Legislature. He was born in the county of Waterloo thirty-three years ago and at one time worked in the factory of Christie, Brown & Co. Ltd., Toronto, manufacturers of biscuits. He owns a fine farm of 100 acres at Long Bay, Manitoulin Island.

Stocks Low and Production May Grow

Mickle, Dymment & Son, whose headquarters are at Barrie, Ont., and mills at Gravenhurst and other points, report that they are operating four camps this season in Haliburton County, and employing about two hundred men. The help supply is only fair, although a little better than last season. The company expect to take out approximately the same quantity of logs and if the weather continues favorable will no doubt somewhat increase their production of last year. Stocks at the various sawmills of the company are getting pretty well reduced. It is expected that the general production during 1920 will run about the same as in 1919. Mickle Dymment & Son add that the high costs of living and supplies are altogether against operating on an extended scale, and they believe that, until there is some easing up in this regard or a general advance of the same proportion in the price of lumber as in labor and other things entering into its manufacture, it is not likely that lumbermen in general will operate to their full capacity. The prices for lumber tend to firmness.

Hon. Honore Mercier, who recently succeeded the Hon. Jules Allard as Minister of Lands and Forests for the province of Quebec, has already demonstrated that he is a capable and progressive administrator. Previous to entering upon his present portfolio, Mr. Mercier was Minister of Colonization, Mines and Fisheries, to which post he was appointed by Sir Lomer Gouin, Premier of the province, in April, 1914. The new Minister of Lands and Forests is a son of the late Hon. Honore Mercier, who was Premier of Quebec from 1887 to 1891. He was educated at St. Mary's College, Montreal, and at Laval University in the same city. The subject of this reference was admitted to the Bar of his native province in 1900, and has since successfully practised law in Montreal. He began his public career when elected as an alderman for Centre Ward in 1906, and the following year was made a member of the Legislative Assembly for the county of Chateauguay. He has been returned in every subsequent contest. Mr. Mercier has shown an active and intimate acquaintance with the great natural wealth of Quebec, and is intensely interested in advanced forestry legislation and in the conservation and perpetuation of all timberlands. When a recent deputation waited upon him in connection with several amendments desired in the matter of the cutting of timber on Crown lands, he assured the members that he was always ready to hear any propositions or suggestions which might tend to develop and protect one of the greatest assets of the province. Mr. Mercier added that he was alive to the points suggested by the deputation and that his previous experience as Minister of Colonization, Mines and Fisheries, when he travelled over many parts of Quebec, had kept him in touch with numerous problems connected with the lumbering, pulp and paper activities.

Hon. Honore Mercier,
Quebec Minister of Lands & Forests

No More Venison for Lumberjacks

The Quebec Government is proposing legislation dealing with the game laws which will effect lumber camps. It is proposed to make September a closed month for the killing of deer, caribou and moose. The season will open only on October 1st, but will last until January 1st, as now. Hunting associations have been pressing for a long time to have September made a prohibited month.

Another amendment to the law is designed to protect still further deer, moose and caribou. It is to be absolutely prohibited that any venison whatever shall be in the shanties. The lumbermen must not kill any of this game at any time for food or other purposes. The law at present permits each person to kill two of each animal, and the Government, according to a Quebec despatch, found that lumbermen have been practically feeding their men in the camps with venison, and the slaughter has been heavy. When an inspector under the new law, finds venison in a camp, it will be confiscated and a fine imposed. When it is a case of 500 to 2,000 men in a lumber camp being fed on game, the destruction is claimed to be too heavy to allow the practice to continue. There is such prohibition in the State of Maine.

Many Farmers are Cutting Pulpwood

Many farmers along the Q. R., L. H. & P. C., in Quebec, are busy cutting wood to carry out contracts they have made with jobbers in supplying them with large quantities of pulpwood that is being transported to the United States. There is an immense growth of wood owned by the farmers, who are now getting the material ready to haul to the railway station, where it will be placed on cars and shipped direct to the mills across the border. There is a new source of revenue for the farmers who own and live on lands along the lines of the railway, which expects to carry many thousand cords of wood during the coming winter and spring from a number of centres. This new business is altogether separate from the wood cut at the St. Anne Power Co., who ship annually 30,000 cords.

New Eastern Salesman Appointed

K. M. Brown Enters Upon His Duties in Toronto as Representative of the Vancouver Lumber Co.

K. M. Brown, Toronto, Ont.

Kenneth M. Brown, who was recently appointed Eastern Canada representative of the Vancouver Lumber Co., Limited, Vancouver, with headquarters in the Excelsior Life Bldg., Toronto, succeeding Chas. J. Brooks, who returned to Vancouver, has had eight years experience in the various branches of the lumber industry.

Mr. Brown, whose native city is Minneapolis, Minn., took his first position with the Atlas Lumber Co., being a member of the head office staff. This was in 1912, and two years later he went north to become identified with the International Lumber Co. He was engaged in the warehouse and also in clerking, scaling and logging operations at their divisional headquarters at Ray, Minn.

Later he returned to Minneapolis and again joined the Atlas Lumber Co., and in 1916 journeyed north once more to become associated with his old employers, the International Co., at Gemmell, Minn., where he had charge of their railway warehouse. Not having had a holiday in several years, Mr. Brown took a rest for some weeks, which he spent in Spokane, and then went to British Columbia, where he was in the employ of the Adams River Lumber Co., as scaler. He was next moved to the head office at Chase, B. C., where he was in the shipping and sales departments, and finally was made assistant sales manager, which post he held until May of last year. Then he took up his residence in Vancouver and discharged the duties of shipping clerk for the Vancouver Lumber Co., where he remained until his recent appointment.

Mr. Brown is a young man of pleasant address and is proving himself an energetic salesman. He is already well known to the trade in Toronto and Western Ontario, and is taking a lively interest in all affairs pertaining to the welfare and progress of the lumber industry.

New Distinction for Mr. Isherwood

Owing to his having been appointed Vice President of the Commercial Journal Company, publishers of "Lumber," St. Louis, Mo., E. D. Tennant has decided that it will be impossible for him to retain his position as Secretary-Treasurer of Hoo-Hoo and has tendered his resignation. Realizing the splendid service that Mr. Tennant has rendered the Order of Hoo-Hoo in bringing the organization up to its present high standing, the Supreme Nine was loath to accept his resignation. H. R. Isherwood, Retail Service Representative of the National Lumber Manufacturers Association, is the new Secretary-Treasurer of Hoo-Hoo. By securing the services of Mr. Isherwood the Hoo-Hoo will have as an officer one who is known to thousands of lumbermen throughout the country. He is a firm believer in the value of Association work and fully realizes the important factor that the Order of Hoo-Hoo is in bringing lumbermen and their allied friends together on a fraternal basis. Secretary-Treasurer Isherwood has had wide experience in the lumber game and is known as an authority on the retailing end. He will be ready at all times to give his advice and assistance to members of Hoo-Hoo, and the lumber industry, on all matters pertaining to the work which he has been so successfully connected with.

Many Amendments Wanted in Forestry

A meeting of the Forestry Advisory Committee was held in Quebec recently and it was recommended that the extra length which would be allowed without charging stumpage to cover "brooming" of logs in rapids would be as follows:

Logs four to seven feet long, two inches; logs eight to eleven feet, four inches; twelve feet and longer, six inches. Logs cut longer than this would entail a stumpage charge for an extra foot.

Several other very important recommendations were made to the Minister of Lands and Forests. A proposed reforestation policy was

outlined by Mr. Piche, the Chief Forester, and met with the hearty approval of the committee.

On the same day a meeting of the Quebec Forest Protective Association was held, the Minister of Lands and Forests sitting as a director. Many matters of importance were discussed.

The question of the clearing of the right of way of the Canadian Government Railways of inflammable debris was brought up and the minister was urged to try to get the Department of Railways and Canals to attend to it. The number of railway fires during the past season was very large and the committee felt that efforts must be made to stop them. The question of compelling limit holders and settlers to clear a strip 100 feet wide back from the railway lines of logging debris was also discussed.

The necessity of having permits, issued free of charge, to all persons going on Crown timber lands so that fire rangers could keep track of them, and also so that they would feel more responsibility about caring for their camp fires, was also urged. Many fires are set by berry-pickers, gum pickers, prospectors and hunters. The burning of debris from the construction of logging and tote roads, and of colonization roads was recommended. Legislation was also asked fixing a minimum term of imprisonment for infringements of certain of the forest laws. At present there is a maximum and minimum fine fixed and a maximum term of imprisonment, but no minimum term, so that in certain cases magistrates have given men one hour or one day in prison in lieu of a fine, which has made the law only a farce.

Lumber Company Greatly Increases Output

Zotique Mageau, M.L.A., Sturgeon Falls, Ont., who some time ago purchased the equipment and saw mill of James Playfair at Midland, Ont., which had not been in operation for the past few seasons, states that he has disposed of considerable of the machinery, but has quite a quantity yet to sell. The McGibbon Lumber Co., of Penetang, have bought two boilers, one engine, carriage, trimmers, band resaw, edger, chains, etc., to place in the new mill which they will build owing to their plant having been burned down a few months ago. The Mageau Lumber Co., of Field, Ont., are replacing their circular by a twelve inch, double cut band and also a steel, steam set carriage. They are also adding more power in the way of an extra boiler and an engine, which will take care of the band saw. With these alterations, Mr. Mageau reports that they expect to increase their cut by, at least, 10,000 feet a day, and their estimated production for next year is 7,000,000 feet of lumber.

In reference to the cost of logging operations for the present season Mr. Mageau says: "We find there is an improvement in the quality of labor, but the wages that we have to pay this year is undoubtedly the highest that was ever paid in this part of the country. When you figure hay shipped out from the surroundings here at \$30 to \$32 per ton, oats at \$1.25 per bushel, and the food increased on an average of 25 per cent. over last year, with the exception of beef, it can be readily understood, in order to secure a fair margin of profit over the high expenditure, that lumber should sell in this section from five to ten dollars more per M feet. In my judgment this would leave about the same profits as were realized from last year's operation."

Vancouver Wants New Lumber Wharf

Pointing out the necessity for a lumber wharf and booming grounds for Vancouver, the manufacturers bureau of the Board of Trade recently wired to the Vancouver harbor commissioners at Ottawa, urging that the government be approached on the matter. While such improvements are contemplated in the government scheme, it was pointed out by the bureau that greater benefit would result from their early construction.

Another appeal will be made to the Canadian Freight and Traffic Association by the bureau in conjunction with the transportation bureau in an effort to have the discriminatory freight rate against Vancouver, over American roads, abolished.

Saw Dust is Not Good for Pulp

Almost every kind of wood has been proved suitable for the manufacture of some form of paper, but there are considerations affecting the use of each kind which must always be observed. Most of the pulp is made from the wood cut especially for the purpose, but almost any wood can be used provided it is free from dirt, knots, and bark. On account of short fibres sawdust is not considered feasible. The pulp produced from sawdust will not felt properly and there is usually much difficulty in cooking it. There are several mills in the country now using mill slabs, shavings, and waste. Of course this cheapens the cost of production. Of the mill waste referred to shavings are considered better for the purpose and if in sufficient quantity make very good raw material.

Gloucester Lumber Co. is Expanding

Progressive Eastern Organization Will Get Out Unusually Large Cut This Season at Bathurst

The Gloucester Lumber & Trading Co. have for nearly twenty years conducted a most progressive and ably administered lumbering industry, with headquarters at Bathurst, N. B., which is one of the most important lumbering centres in New Brunswick. The company's natural location, splendid shipping facilities and convenience to timber limits, have contributed in no small measure to the success and expansion of this organization.

The company are aggressive and alert, and has a large force of men engaged in the industry. Many important additions and improvements have been made during the past few years, until at present they own and operate two large saw mills, one at Bathurst and the other at Burnsville, some thirty miles distant, situated on the property formerly owned by the Eureka Lumber Co. These two mills are run during the months between April and November, having a combined daily capacity of 150,000 feet, b.m., per ten working hours.

The present Bathurst mill is 190 ft. x 50 ft., with a brick boiler house, which is designed in the most modern manner. The sawing equipment consists of two rotaries, resaw, edgers and lath and shingle machines. The Burnsville mill, which has recently undergone extensive repairs and additions, is 165 ft. x 65 ft., having a

expected the firm will get out about sixteen million feet of logs. The operating costs are considerably in advance of last year, with the prices of provisions soaring. Labor is more plentiful, but demands higher wages and shorter working hours. It is generally thought higher prices will be asked for next year's cut; in fact the firm have closed for a winter's cut at a figure considerably over that received last season.

The Profitable Utilization of Sawmill Waste

Discovery by government chemists and efficiency engineers, of numerous ways in which waste from lumber mills, woodworking factories and other enterprises of a like nature may be used to much profit, promises to be a boon to the lumber industry in this country. Government experts have been carrying on timber tests, and have reached some interesting conclusions. Utilization of waste from the numerous woods has been the object of much experimenting. As an example, the manufacture of lath calls for annual production of about 68,000,000 feet, every bit of which is now made from waste lumber.

In the manufacture of chairs and chair stock, more than 87,000,000 feet of waste material is used and 101,000,000 feet of waste now goes into the construction of woodenware and novelties. The largest item of saving is in boxes and crates, in which industry nearly five hundred million feet of waste lumber is used. Certain industries have been built up in the distillation of hardwoods, in which 70 per cent. of the hardwood used might be termed waste. The woods mostly used in this industry are beech, birch, and maple, from which wood alcohol, acetate of lime, charcoal and hardwood tars are made. One of the things to which the government experts are giving special attention is the manufacture of wood pulp from wood waste.

Already a large number of mills in the southern states operate almost exclusively on waste material, producing the so-called "kraft" papers. Another means of utilizing waste material is in the tanning extract industry. Tests show that the waste from chestnut lumber is as rich in tanning as the solid wood, and experiments are now being conducted with a view of utilizing the sawdust, slabs, and chips. The Osage orange is the source of supply of a yellow extract which is used to produce a series of yellow and brown colors used for dyeing leather, paper, and textiles. The wood now being used is practically waste which comes from Oklahoma and Texas.

Sawdust has constituted one of the great wastes of lumber operations. While a great deal of it is burned at the mills to furnish steam for power machinery, in many cases the supply has been greater than the demand. Sawdust, has to a very small extent, been used as a fuel in gas producers, but when so used it is necessary to mix it with chips to prevent backing.

In Los Angeles a plant is in operation which mixes sawdust with other ingredients to form a fuel briquette which is used quite extensively. There have been very many other uses found for sawdust, but a very small portion of it goes into the making of artificial floor covering.

It has been the experience of the Forest Service that each new use found for waste material has resulted in the establishment of plants to utilize some portion of the great quantity of the waste material, and it is hoped that in due time some use can be found for every part of the tree, once it is down.

Big Stock of Woods Still Available

The Timber Disposal Section of the Board of Trade holds a stock of some 38 million cubic feet of constructional woods, lying at various ports in the country, as well as some 7,000,000 ft. super of hardwoods suitable for the furniture and kindred trades. So far little of this constructional wood has been put in the public auction sale hooms, the Timber Disposal Section preferring apparently to dispose of its stock through the usual trade channels. Some authorities in the trade, however, are of opinion that it would be of great benefit to house builders if this timber were offered for sale by auction. A further gain would be that as by this means stocks would soon be cleared, the congested condition of the principal ports would be appreciably relieved. In order that the railways should not be further burdened with traffic, it is suggested that a proviso could be made in the terms of sale that the timber must be conveyed to consumers by road or water. The main point is that, while all these stocks are merely encumbering the ports, inland points are urgently in need of timber, and cannot procure it readily.—London (Eng.) Times Trade Supplement.

The McGibbon Lumber Co. of Penetanguishene, Ont., have mailed to their friends and customers an artistic Christmas folder, showing a typical winter scene and accompanied by expressive wishes for many happy returns of the glad Yuletide season.

Part of the large stock of spruce sawn by Gloucester Timber & Trading Co. at Bathurst, N.B. The picture shows the excellent dock and water shipping facilities on the Nepisiguit river. The dock has a piling capacity of 5,000,000 ft.

modern brick boiler house and equipment. A single cutting band and a band resaw, edgers, lath and shingle machines constitute the installations in this mill.

Besides operating these plants during the summer months the company have several portable mills cutting during the winter season.

At all the mills there is ample piling room, thus permitting the lumber to be piled good and open and allowing it to season nicely. The principal stock cut is spruce and white pine, with a little mixed hardwoods. The company make a specialty of cutting poplar logs for a special market, for use in the manufacturing of matches. Railway ties and pulpwood are also on the list of commodities which they supply.

Shipments from Bathurst can be made either by rail or water and the accompanying illustration shows a portion of their dock at Bathurst, which has a piling capacity of about 5,000,000 feet. Vessels drawing up to twenty feet can be loaded safely and quickly. This dock has been built up out of the waste from the company's Bathurst mill accumulated during the past four years. The frontage of the dock is about 1,000 feet. Shipments from the Burnsville mill are made by rail and, should it be necessary to export from this mill, the lumber is moved by rail to Bathurst and thence reloaded, at a low charge for handling.

The greatest portion of the lumber sawn by the Gloucester Timber & Trading Company is taken from Crown lands. The portable mills cut from the lots that are not so conveniently situated as to have the logs driven to the larger mill booms. The company are pleased that there has not been any great destruction by fire on any of their limits for many years, which is due mainly to the splendid forest protection service of the New Brunswick Government.

Messrs. Wm. G. White and Geo. A. Rogers, the owners of the company, both take an active part in the operations of its affairs. Logging camps are operated under the supervision of capable foremen who have been employed by the company since they first began operations. Logging activities are larger than ever before and it is

Personal Paragraphs of Interest

M. C. Foley of the Foley Lumber Co., Toronto, who has been ill for some time, is able to be around again and attend to business.

F. McCullam of the McCullam Lumber Co., Detroit, spent a few days in Toronto recently on business, looking into the hardwood situation.

Frank A. Kent, managing director of Seaman, Kent Co., Limited, Toronto, who was laid up for several days with tonsillitis, is able to be around again.

Messrs. Arnold Hansen and G. A. Faulkner, of the Forestry Division of the Laurentide Co. Ltd., are opening an office in Montreal as timber cruisers.

A. M. Stamm, representing W. W. Vosburgh, wholesale lumber, Pittsburgh, Pa., spent a few days in Toronto and other cities recently calling upon the trade.

A. E. Masuret, of Toronto, representing the Service Lumber Co., Vancouver, B. C., left recently on a business trip to the Coast and will pay a visit to a number of the principal mills.

J. A. Oliver, representing the Wilson and Greene Lumber Co., Inc., Syracuse, N.Y., spent a few days in Toronto on business recently on his way north to look over a large stock of lumber.

P. T. Coolidge, of Coolidge & Carlisle, Consulting Foresters, has returned to his office in Bangor, Maine, upon the completion of the cruise of large tracts in Newfoundland. He has been in Newfoundland nearly a year.

Jas. C. Scott of the firm of J. C. Scott Co. Ltd., woodwork manufacturers, Toronto, died recently of heart trouble. Born in St. Thomas in 1854, Mr. Scott came to Toronto forty years ago and founded the firm that bears his name, retaining an active interest in the business until his death.

James T. Gordon, President of the Gordon, Ironsides & Fares Co., Ltd., died recently at his home in Winnipeg after having been in failing health for some years. In 1878 he went West and started a lumber business at Manitou, Man., and later added other lines, and from this small beginning built up one of the largest Canadian packing plants.

Louis Rolland, of Blair & Rolland, Ltd., Montreal, sails on January 10th for England. He will afterwards visit Paris, and take charge of the lumber department of a large financial institution, who now have offices in London and Paris. Mr. Rolland will also make efforts in the direction of creating a larger demand for Canadian lumber. His departure will in no way affect the position of Blair & Rolland, as his interest in the firm will not be disturbed.

T. G. McGeary, who for the past three years has been on the selling staff of Hart & McDonagh, Toronto, has gone with the Fesserton Timber Co., Toronto, and will be in charge of their hardwoods department. This firm intend devoting much greater attention to hardwoods in the future and will handle all the leading kinds in addition to keeping their softwood and B. C. forest products department fully up to the mark. Mr. McGeary has had a long experience in the hardwood line and was for some years with the Wilson Lumber Co., Toronto.

J. L. McCormack of Brantford, who for the past four years has been a valued member of the selling staff of Campbell, Welsh & Paynes, and Roy R. Stewart, who has been with Muir & Kirkpatrick, Toronto, since 1915, and is well known to the retail trade, have formed a partnership under the title of McCormack & Stewart, and are opening a wholesale lumber office in Hamilton. Many friends in Ontario will wish the organization every success. Mr. McCormack was for several years with Mickle, Dymont & Son, Brantford, and Mr. Stewart was for a considerable period with the Long Lumber Co., Hamilton. It is understood the new firm will handle leading Ontario woods.

W. & H. Hill, dealers and manufacturers of timber and lumber, Goderich, Ont., have disposed of their entire lumbering business as a going concern, including limits, lands, mill, stock, lumber, ties, etc., as well as camp and logging equipment, to the Metal Shingle & Siding Co. of Preston, Ont., who are now operating the same. Mr. Hugh Hill, manager of the Hill lumber business, has bought the farm where he was raised and intends following agricultural pursuits, while Mr. Wm. Hill had to give up business owing to failing health. The farm to which Hugh Hill has retired, is one of the best in the county of Huron, consisting of two hundred acres of rich soil with unsurpassed buildings.

Mr. Gustave F. Kuhring, B.Sc.F., from the University of New Brunswick, has resigned his position with the New Brunswick Forest Service to take a lucrative position with the Riordon Pulp & Paper Company, Montreal, under their forester Mr. Ahyberg. Mr. Kuhring commenced his forestry work with the Laurentide Pulp & Paper Company in 1913. He has four years' service overseas to his

credit, was wounded three times and honorably mentioned in despatches, and has been engaged with the N. B. Forest Service on forest survey work since returning. Mr. Kuhring expects to leave Montreal early in January for an extensive dog-train trip into the North. He is one of the several New Brunswick foresters who have recently accepted responsible assignments with private lumber and pulp companies.

George W. Grier, who was recently elected president of the Montreal Lumber Association, is the head of the firm of G. A. Grier & Sons Ltd., wholesale lumber merchants, Montreal. The firm handle chiefly white pine and spruce, but also do some trade in hardwoods. The business was founded in 1871 by the late Mr. G. A. Grier, father of Mr. George W. Grier. The latter has been associated all his life with the firm, and was taken into partnership in 1905, when the name was changed from G. A. Grier to G. A. Grier & Son. Later some of the brothers of Mr. Grier also became identified with the firm, and the name was again changed to G. A. Grier & Sons, Ltd., George W. Grier has managed the firm for the last sixteen years, and on the death of his father, in 1916, was elected president of the company. He is a director of the Canadian Lumbermen's Association, and is well liked and well spoken of by a large circle of friends.

Death of Mr. G. H. Askwith

The death of Mr. G. H. Askwith, the assistant sales manager of the Riordon Sales Co., Montreal, took place recently in his fortieth year. Mr. Askwith, who died from pneumonia following an operation for appendicitis, was one of the brightest and most genial members of the lumber and pulp industries. He was held in great esteem by the directors and the officials of the company, who knew by experience of his sterling qualities both as a man and as an employee. Born in Ottawa, he was employed by the George Perley Lumber Co., and on the amalgamation of that company with the Riordon Pulp & Paper Co., nine years ago, he went to Montreal and entered the service of the latter company. The funeral service was conducted in Montreal in the chapel of the Royal Victoria Hospital, by Rev. Mr. Allan, of Outremont Presbyterian Church. The remains were taken to Ottawa and the funeral took place from the residence of his parents, Mr. and Mrs. Francis Askwith, 94 Crichton Street, to Beechwood Cemetery. The solemnities at Ottawa were conducted by the Rev. Mr. Brown, of St. Bartholomew's Church. A large number of wreaths, sprays and flowers were received. A wreath came from the Riordon Sales Company, Montreal, and another from his associates in the company. The Riordon Sales Company was represented at the funeral by Brig.-Gen. J. B. White, of Montreal, and Mr. George White of Hawkesbury, Ont. Mr. Askwith leaves a widow and three children.

New Hardwood Inspectors for Canada

The regular mid-year meeting of the Board of Directors of the National Hardwood Lumber Association, of which board A. E. Clark of Toronto is a member, will be held on Thursday, January 22, at the headquarters of the Association, in Chicago, Ill.

A recent issue of the Official Bulletin says: Arthur G. Bowler has been appointed Deputy National Inspector, and placed in charge of the Montreal district. His present address is 179 Drummond St., Montreal, Que., John E. Banks has been appointed Deputy National Inspector to assist H. L. Hebard in charge of the Toronto district. Applications for inspection work in the Toronto district should be addressed heretofore to H. L. Hebard, 383 Carlaw Ave., Toronto, Ont.

Among the recent applications for membership in the N. H. L. A. is that of Wm. F. Hamlyn, Belmont, Ont.

Wayagamack Co. Buys Valuable Limits

The Wayagamack Pulp and Paper Co. of Three Rivers, Que., have purchased the Breakey timber limits in Gaspé, situated on the York river, which cover a total of 450 square miles, and will be particularly valuable to the Wayagamack Company, as 90 per cent. of the timber on the limits is spruce, the kind of wood the company require for the manufacture of kraft products.

The York river is driveable through the entire length of the limits now acquired, and it is the intention to ship to the Wayagamack plant at Three Rivers by means of steam barges.

This new acquisition will place the Wayagamack Company in a very strong position, as it will now have very valuable limits in the St. Maurice district, on the north shore of the St. Lawrence and the Breakey limits on the south shore.

It is understood that it will not be necessary for the company to effect any additional financing in connection with this important purchase.

Panoramic view of the sawmills of the Bishop Lumber Co., Ltd., Nesterville, Ont., showing the railway of the company and water yards. The company this season, in addition to several logging camps, are taking out waney board or square timber, and will hew approximately 250,000 cubic feet.

Bishop Lumber Co. is Busy Concern

Operating Nine Logging and Three Timber Camps in the Algoma District—Splendid Shipping Facilities

The Bishop Lumber Co., whose busy mills are located at Nesterville, Ont., in the Algoma district, is among the most widely-known of the newer institutions of the lumber line in Ontario. The company was formed in September 1916 and at that time took over the assets of the Thessalon Lumber Co. The wood, which the Bishop Lumber Co. turns out, is principally white pine, although there is some Norway and spruce. The capacity of the Bishop Lumber Company's plant is 150,000 to 175,000 ft. a day, and the firm usually cut between 25,000,000 and 30,000,000 ft. during the season. The equipment of the plant consists of two band saws, a gang and a re-saw. There is also a lath mill, picket mill and a mill for manufacturing box lumber from slabs.

The mill of the Bishop Lumber Co. is constructed of timber with concrete foundations for all the machines and the power plant consists of six 100-h.p. boilers. The yard is equipped in such a way that 8,000,000 ft. can be piled on the waterfront for boat shipment; 8,000,000 ft. on railway tracks for rail shipment and 8,000,000 ft. in the yards which can be forwarded handily by either for rail or water.

The personnel of the company is composed of H. H. Bishop and his three sons, H. W. Bishop, J. A. Bishop, and C. S. Bishop. Mr. Bishop, Sr., who is the President and General Manager, has been engaged in the lumber business in Chicago for the last twenty-five years and is at the present time interested in the Thornton-Claney Lumber Co., being chairman of the Board of Directors. H. W. Bishop is Vice-President and J. A. Bishop Secretary-Treasurer.

Nine logging camps and three timber camps are being operated this year by the Bishop Lumber Co. The company expects to produce 250,000 cu. ft. of square timber from its timber camps this winter.

How Forest Protective Telephones Operate

The construction of the forest protection telephone line in New Brunswick is proceeding satisfactorily. About 22 miles have been built, leaving 18 more to construct in order to reach the Bald Mt. Lookout Station, N. B. It is expected that the work will be completed about December 15th. Since the arrival of snow the transportation of wire and provisions has been rendered much easier. The construction partly consists of seven men and necessary teams. Mr. H. C. Kinghorn is in charge.

The line is being built in the most modern method of tree construction. The wires are stretched across the road between opposite trees; the main telephone wire is attached to the tie wires by split insulators in such a position that it remains suspended over the centre of the portage and about 15 to 18 feet from the ground, very similar to the method in which a trolley line wire is supported overhead in the middle of a street. The wire is thus kept free from contact with the brush on each side of the portage road. Any overhanging branches are trimmed off with a special tree trimmer which easily removes branches up to two inches in diameter. The main line is kept reasonably tight by being snubbed to a tree by a strain insulator once every half mile.

Sufficient slack is left in the wire to allow several trees to fall across it and bring the main line to the ground without breaking it or its supports. When the fallen trees are cut out the line springs up to its place. If the main line is not broken messages may be sent over it, even if several trees are lying across the wire. Telephones are being installed at convenient points about 10 miles apart. Bald

Mt., which will be the upper end of the line, is approximately 60 miles from Newcastle, and when telephone connection is completed the line will be of considerable local value as well as serving the purpose of better forest fire protection.

Flnds Abounding Prosperity in Canada

Having completed a tour of Canada as far as the Pacific coast, which included twenty-seven cities, after an absence of eight years, Harrison Watson, Canadian Trade Commissioner, and senior of the commissioners in England, on the eve of returning, said he was greatly struck with the great prosperity of the country as a whole. In fact, this very prosperity, said Mr. Watson, rather hindered the promotion of Canadian export trade to Great Britain, for he had come across manufacturers who had been eager to get orders from Britain a year ago, to-day regretting having accepted them, as they found they could command higher prices here.

New Position for Mr. J. W. Bonter

J. W. Bonter of Marmora, Ont., has just been appointed manager of lumber operations for the Metal Shingle & Siding Co., Ltd., of Preston, Ont., and has entered upon his new duties with headquarters at Hadlington, Ont.

J. W. Bonter, Hadlington, Ont.

The Metal Shingle & Siding Co. had their mills destroyed by fire in October last, but have not yet decided to rebuild. Mr. Bonter will have charge of all hardwoods cut at Hadlington, which will be his post office address instead of Marmora. While he is a member of Wm. Bonter & Sons of the latter place, that company is not operating this year owing to their mills being burned in October last.

Mr. Bonter has been in the lumber business all his life and says he hopes to stay in the game for some time yet as he believes that a man's career is too short to switch off and make a success of something else. He has for many years been a reader of the "Canada Lumberman," and adds that he finds the paper very useful and instructive and would be completely at sea without it in his business.

Ontario Retailers Will Gather in Hamilton

Big Provincial Convention of Lumbermen Will Assemble in Ambitious City on February 24 and 25—Many Important Matters to be Discussed

Owing to the fact that another convention will be held in Hamilton at the Royal Connaught Hotel on Tuesday and Wednesday, February 10th and 11th, the big gathering of the Ontario Retail Lumber Dealers' Association has been postponed for two weeks. Accordingly, the annual convention will be held on Tuesday and Wednesday, February 24th and 25th. It is expected there will be a large and representative attendance.

Annual reports will be presented, officers elected and many matters of vital interest to the retail lumbermen will be taken up. An interesting program is being prepared and will embrace many topics on which it is proposed to inaugurate a forward move. All retail lumbermen are assured of a cordial welcome in Hamilton, and President Thomas Patterson has promised that no one will go away disappointed either from an educative, trade or social standpoint. The main thing for all lumbermen to remember is the new dates, Tuesday and Wednesday, February 24th and 25th, and let nothing interfere with their attendance and coming to take part in the discussions.

It is understood that the retail and wholesale lumber trade of Hamilton will entertain the visiting delegates to a dinner and arrangements are already progressing with an energetic committee in charge. In the way of a feast the lumbermen of the Ambitious City promise to provide something unique and attractive, and, judging by their reputation for hospitality, they will succeed in any undertaking they have in hand.

Retailers Want New Mechanics Lien Act

The Ontario Retail Lumber Dealers Association intend pressing for amendments to the Mechanics Lien Act at the forthcoming session of the Ontario Legislature and the Secretary recently sent the following letter to Hon. W. E. Raney, Attorney General of the province, which explains itself.

The Ontario Retail Lumber Dealers Association brought to the attention of your predecessor, Hon. I. B. Lucas, on February 12th, 1919, the necessity for the enactment of a new Mechanics Lien Act for Ontario. A large deputation of Ontario Retail Lumber Dealers called upon the Attorney General and the Prime Minister at that time, and received a very courteous hearing.

We were asked to submit any important amendments we desired to have introduced for consideration during the then approaching Session, and it was suggested that in the recess between that Session and the next we should submit proposals for a new Mechanics Lien Act. When we submitted suggestions for amendments the Committee on Legislation announced that the subject was so important that they would prefer to have a Special Committee appointed to enquire into the whole situation with a view to the possible enactment of a new Act rather than introducing further enactments. Near the close of the session a special committee consisting of Hon. I. B. Lucas, Hon. W. D. McPherson, Messrs. Wm. Proudfoot, H. H. Dewart, Udney Richardson, C. S. Cameron, Irwin Hilliard and V. A. Sinclair, was appointed by the government for the purpose of hearing all parties interested and reporting at the next session of the Legislature.

The result of the elections on October 20th has been to dissolve this committee. We have noticed in the press of late a statement reported to have been made by the Hon. W. R. Rollo that the government will proceed with this important subject. We hope that this is the case and we will be indebted to you if you will be good enough to give us any information you can upon the subject for our future guidance.

Bill No. 102, 1919, was introduced last session on this subject and contained the amendment which our Association suggested along with other amendments suggested by other parties interested. We enclose a copy of the bill in which we have marked the clauses for which our Association was responsible.

New Retail Firm is Extending Plant

As announced in the last issue of the "Canada Lumberman" the Sheppard & Gill Lumber Co. have taken over the business of O. & W. R. Smith, 12 Drayton Ave., Toronto, and have also purchased two more blocks of land, each of one hundred feet square, adjoining each end of the yard, and fronting on the Grand Trunk Railway. The new firm are also leasing a piece of land about five

hundred feet by eighteen feet from the G. T. R. They have started building an up-to-date office, and are also constructing a planing mill, which will be equipped with the most modern machinery and electrically operated. It is expected that the new mill will be in full running order next month.

The Sheppard & Gill Lumber Co. is composed of L. B. Sheppard, E. I. Gill, and H. L. Sheppard. All three partners have been raised in lumber towns. L. B. Sheppard has been directly connected with the industry for the past sixteen years, and for the last six has been woods manager of the Georgian Bay Lumber Co. of Waubaushene. E. I. Gill and H. L. Sheppard are both graduates of the School of Practical Science, Toronto, and have been overseas for three years, returning in June last. Mr. Gill had several seasons' experience with the Victoria Harbor Lumber Co. Ltd., and also with the John S. Metcalfe Co. of Chicago.

Why Retailers Lose Some Old Customers

The fact is we are apt to presume a little too much sometimes on the attachment of an old customer, when we are busy and several others waiting in the yard to be loaded up. Our tendency is to give our attention first to those who are irregular in their trading with us, and so we give them prompt service and our best treatment as a bid for their more regular trading, says C. H. Kettridge of Evanston, Ill. In the meantime, perhaps, we let our old customer wait even though we know his turn came ahead of the other party. He is, for the time, ignored, because we know he will come again, so it don't matter. At least we think it don't. Our old friend though, was probably in as much of a hurry as was the one we waited on before him and when you passed him over, with excusing yourself to him, he felt it. Doing this, and other little things like it, several times, will so work on his sensibilities that he will get to thinking he will get better treatment from the competitor who has several times intimated he would like some of his trade. Next time, he goes there, and that may be the last you will see of him in your yard.

Another reason for the old customer leaving us is, we are not as careful about pleasing him as we are when he first began trading with us. Then we took pains to do a little sorting out for him, and were very careful when he sent in for something to send him the best. But we grew less particular in this regard as he became a regular patron and shoved off stuff on him that the average transient customer would "kick" about and refuse. Doing this several times he begins to think you are either not keeping as good stock as you used to, or that you are imposing on him. Some of these old customers will complain to you about what they don't like but others say little or nothing and it is mostly these quiet customers that leave us, and rarely return again.

You may surmise that in the foregoing I have reflected some of my own experience. If you do, you are correct in thinking so. I learned after awhile, however, when new customers began getting scarce, that it is unwise and poor policy to take for granted anything of this kind. I have learned the lesson of never being sure of a customer coming to the yard for his next requirements. I was sure only when I had sold him and his stuff was on the wagon. I learned also, to treat every customer in a way as to impress on him that I wanted and expected him to come again, and, in parting, I generally invited him to call and see me when in town whether he wanted anything in the yard or not. In our hurry we are apt to forget these parting words for a farmer thinks of them after he gets home and is unconsciously influenced by them to drive into the yard again.

A friendly business man draws the trade, but one of a grouchy disposition the average buyer has no use for. A farmer likes to feel that the dealer he trades with is his personal friend, one that he can talk to about his own business and seek for his advice, and the dealer on his part needs this kind of friends, for, contrary to the saying, "there's no friendship in business," I have found and learned that in country trade friendship is the most potent factor in establishing and retaining a business.

People will trade through preference where there is an atmosphere of welcome and good will and with a man who expresses his friendship for them by little personal acts of service. But, let me say, however, you can't put all of this on like a cloak and get away with it among country folks, for they will surely see through the sham and spot you accordingly.

In the accompanying views, which are representative of the progress in logging and camp activities in British Columbia, on the left is shown the mess-hall and sleeping cars of the Mainland Cedar Co. of Vancouver. In the centre is Joseph Olson, woods foreman, in the act of "looking ahead," and on the right is an interior glimpse of the office, showing J. G. Gody, notary public, past master scaler and storekeeper of Mainland Cedar Co. at Port Neville, B. C.

Ministry Hostile to Wooden Houses

British Authorities Believe that They are Almost as expensive as Brick—Other Points Raised

Mail advices from England give details of the recommendations of the Ministry of Health with regard to wooden houses. Many of these recommendations as to restrictions met with such criticism that they were withdrawn. The Ministry is alleged to be hostile to wooden houses, mainly on the ground that they will be having regard to English conditions, almost as expensive as brick. Here is a summary of the report, made as the result of a special investigation by a committee as a part of the Government housing scheme.

This committee, it is stated, have approved a large number of new materials and new methods of construction which hitherto have been prohibited by existing building by-laws and regulations. In order, therefore, to bring these methods into practical use steps have been taken to relax these restrictions, and new regulations are being issued.

Arrangements have been made for sample houses to be imported from Canada and erected in England, and it is explained that these sample buildings are to provide the accommodation required for houses under the housing scheme.

As to cost, estimates of wooden frame houses, compared with brick houses, have been obtained, and it is stated that these show that a wooden frame house from British Columbia, with fittings and accommodation, as now required by the Government in England, would cost about £700.

The brick work of an ordinary cottage, it is pointed out, represents only about one-third of the total cost, and the expense of the remainder of the house will be the same whether the building is of brick or wood. According to the figures at present obtainable, it is stated that the saving by using a wooden shell is at most 6 per cent. of the cost of a similar brick house.

The ordinary Canadian wooden house differs considerably, it is added, from a house which a British tenant expects. The wooden houses have a basement with a stove for central heating, and if the English love of the open fire is to be respected considerable modifications are inevitable.

Points in favor of the wooden house are given as some, but not much, reduction in cost, and greater speed in erection. On the other hand, it is declared that wooden houses must, in the main, be regarded as only suitable for rural or sparsely populated districts, and that owing chiefly to risk of fire the extensive building of wooden houses in thickly populated towns "cannot be contemplated." It is also pointed out that the modern wooden houses would have an appreciably shorter life than the equivalent brick house.

The new regulations doing away with some of the old building restrictions allow of walls of any material and construction giving sufficient stability and reasonable protection against the weather. Among the types of walls permitted are timber framing covered with weather boarding, asbestos sheets, metal reinforcement covered with plaster, metal sheets and cement concrete.

"The Ministry of Health," it is added, "are anxious to encourage any kind of construction which promises despatch or economy, and any reasonable experiments with these objects will be welcomed."

The Future Timber of South Africa

The South African Journal of Industries publishes an interesting article on Forestry in the Union of South Africa. Insistent demands having been made for some years past by all sections of the community that a comprehensive programme of afforestation should be embarked on, the Union Government decided at the beginning of the year 1918 to place a sum of £50,000 on the loan vote for this object.

In his report for the year ending March 31, 1919, on offorestation schemes, the execution of which is to be carried out from the fund above mentioned, the Chief Conservator of Forests sets out the position of the Union in regard to natural forest resources, the present acreage of Government plantations, and the schemes of afforestation which are being undertaken.

In 1913, the last normal year, the Union imported 17,500,000 million cubic feet of timber, worth just short of £1,250,000 sterling. Nearly 90 per cent. of that was coniferous timber, i.e., soft timber, and the Chief Conservator of Forests estimates that even if fully developed, the natural forest resources of the Union are never likely to be able to supply 5 per cent. of the requirements of the country.

Assuming, on a very conservative estimate, that an acre of plantation will yield 100 cubic feet of timber per annum, the report points out that it will take 350,000 acres to produce the probable requirements of the country in fifty years' time. At present there are only 70,000 acres of government plantations in the Union, and of these 20,000 acres are for special purposes, as, for instance, 7,000 acres in the Transkei to provide hut wattles for natives. From the foregoing the need to press on with afforestation schemes is apparent.

With the extra funds now provided, certain projects have been selected and started. The work is being confined mainly to mountain land, which is of little value for any other purpose, but the question of accessibility for easy distribution of timber has not been overlooked.

The different works will take from five to fifty years to complete, and the average cost per acre is placed at slightly less than £13. Regarding this figure, which is no doubt high, it is pointed out that white labor costing 6s. 6d. per day will be very largely employed at the first six centres mentioned in the list, and that the acres to be afforested are chiefly mountain slopes which cannot be ploughed, and which will have to be cultivated by hand.

Sarnia's Big Mill Closes for the Season

Cleveland-Sarnia Saw Mills Co., Ltd., Sarnia, Ont., closed down their mills for the season on November 29th. Their cut for the year has been about 90 per cent. of what they produced in 1918. They are not operating any logging camps this year but secure their supplies from other sources. In regard to the lumber situation generally, E. C. Barre, General Manager of the company, states that they are going into the winter with less stock than they did in the fall of 1918, in fact their stock is badly broken at the present time. The demand for white pine lumber is exceptionally good and the outlook for winter and early spring trade seems to be particularly bright.

Second Highest Flagstaff in the World

Magnificent Specimen of Douglas Fir 220 feet Tall
Erected in London—An Engineering Beat

The Victory Flagstaff—the second highest in the world—has been safely erected on the summit of Victory Mound, near the Victoria Gate at Kew Gardens, London, Eng. The mammoth spar, appropriately enough, occupies the site where, in the latter part of the eighteenth century, stood the Temple of Victory.

The flagstaff is a magnificent and unique specimen of Douglas fir (*Pseudotsuga Douglasii*, Carr), better known perhaps as Oregon pine, presented by the Government of British Columbia to replace the old flagstaff, also of Douglas fir, which, received from British Columbia in 1861, occupied the same commanding site, until recently, when it was removed, owing to its having fallen into decay.

The dimensions of the latter were: Height, 159 ft.; width at base, 1 ft. 8 in.; and diameter at summit, 5 in. The dimensions of the Victory Flagstaff are: Height, 215 ft.; width at base, 2 ft. 9 in.; and diameter at summit, 1 ft. As these figures convey a very imperfect impression to the mind, it may be interesting, for the sake of comparison, to give the height of other conspicuous and familiar landmarks:

Duke of York's Column	124 ft.
Nelson's Monument	142 ft.
The Monument	202 ft.
Towers of St. Paul's	221 ft.
Bow Church	222 ft.
St. Bride's Church	226 ft.
St. Stephen's Clock Tower	320 ft.
Victoria Tower	336 ft.
St. Paul's Cathedral	365 ft.

Felled in the far-reaching forests of British Columbia in 1914, the gigantic tree, originally 220 ft. in height, 6 ft. in diameter at the base, and 18 in. inside the bark at the top, was hewed by expert broadaxemen to its present dimensions and shaped into a beautiful octagonal staff, rounded and gracefully tapering towards the top. The problem of transporting the spar half-round the world presented many difficulties, all of which were, however, successfully overcome, and on December 29, 1915, the Merionethshire safely unloaded her remarkable cargo in the Victoria Dock, whence it was towed up the Thames to Kew at the end of Sion Vista.

The task of erection, entrusted to the Office of Works, has, like that of transportation, been one of exceptional difficulty. Great precautions have had to be taken to avoid all risk of breakage in the course of erection—a fate which befell the first staff of much slighter dimensions in 1859.

The staff will be surmounted by a huge copper cap or truck, weighing several hundredweight, to which will be attached halyards. The strength of these attachments may be judged from the fact that it will be possible to hoist a man to the summit in order to make periodic inspections of the cap as well as of the vast stem of the flagstaff itself.

The erection of the new flagstaff has a peculiar interest at the present time, in view of the fact that it is the desire and intention of the Forestry Commission to stimulate the planting of the Douglas fir in this country, particularly in Scotland, where climate and soil are alike favorable to its growth. Of course, the Forestry Commission do not contemplate the growth of the mammoth trees that are among the wonders of British Columbia. These trees, which attain an altitude of even 300 feet, take as many years to reach that height. The aim of the commission will be to produce the smaller commercial variety, which takes sixty years to reach maturity.

How Hardwoods Climb in Value

Statistics recently compiled show how the different materials used in furniture making have increased in value. The costs of 57 articles used in the furniture factory were studied and it was shown that the average increase over 1914 was 150 per cent. To enumerate, lumber 170 per cent., red gum 300 per cent., sap gum 225 per cent. No. 2 leather increased 236 per cent., hardware 127 per cent., window glass 165 per cent., mirrors 192 per cent., and very scarce, coal 159 per cent., labor 100 per cent., quarter oak No. 1 common 201 per cent., 1's and 2's 209 per cent., plain oak 156 per cent., beech 164 per cent., elm 121 per cent., crating lumber 118 per cent., and finishing materials 153 per cent.

While these increases have been taking place in furniture requirements, the prices of 265 commodities in everyday use have advanced on an average of 113 per cent. in Canada and 125 per cent. in the United States. In the same period the average increase in furniture values has been 100 per cent.

Oval Die Swage in Great Demand

Since E. C. Atkins & Co. have taken over the Pribnow Swage and Tool Works of Mellen, Wisconsin, Mr. J. F. Probnaw, (the inventor of the Pribnow Swage and the celebrated Pribnow swage shaper) has devoted all his time to the improvement of saw fitting tools.

Mr. Pribnow's years of experience, study and intense application to the swage business now results in his offering an entirely new swage. The new departure in the swage line is the Oval Die Pribnow Swage, equipped with high-grade roller bearings.

This swage has made a record for itself in saving saw steel. Careful comparisons have proved that 25 per cent. more saw steel is saved by using the Oval Die Pribnow Swage. This swage, equip-

ped with roller die bearings, requires less energy than other type swages, to get the best swaging results.

Thus a very effective die is used in this new 1920 model Pribnow swage which puts up the strongest possible working corner and requires no undue exertion by the operator. The wearing qualities of this swage promise to far exceed the difference in the first cost of the swage.

The demand for this swage is very great; so great, in fact, that E. C. Atkins & Co. have found it necessary to install new machinery so that satisfactory deliveries can be made.

The high quality of material used and the durable construction makes this swage most desirable—typical of the entire line of equipment made by the E. C. Atkins Company.

A very interesting booklet called "Atkins Tools for the Filing Room," which fully describes swages and other tools will be furnished on request.

The Fire Losses in Canada

Striking evidence of the great need for concerted action in the fire prevention movement in Canada is found in a comparison of its per capita loss with that of other countries.

Records show that the average per capita loss in thirteen European countries for the three years, 1912-1915, was \$0.71, as against \$2.96 in Canada.

More striking still is a comparison of the per capita fire waste in Canada and the United Kingdom during the war period, August, 1914, to December, 1917. The figures are:—

Canada	\$3.53
United Kingdom	0.40

There are a number of reasons why Canada appears to such great disadvantage in the foregoing comparison, which might be summarized:

1. Her climate with its extremes of heat and cold.
2. Faulty construction usual to young countries.
3. Lack of enforcement, and, indeed, utter disregard, of the building by-laws.

In the opinion of the writer, formidable as are these disadvantages, as a whole, they would rapidly assume less serious proportions if the various Governments of Canada could see their way clear to introduce fire preventive legislation similar to that in European countries. In the latter, occupants, in event of fire, are required to prove that they were in no way responsible for the loss; otherwise, they are condemned to pay the damage that their carelessness has caused others.

The figures already quoted seem to demonstrate that the fire preventive legislation adopted in Europe has proven of immense value.

Canada should follow suit without further loss of time.—T. H. Hall.

How Bright Salesman Can Help the Retailer

Interest Should Not Cease as Soon as Sale is Effected—Practical Advice on Co-operation and Developing Future Business with Customers

Modern ideas have converted the dealer into a building material merchant, and the close relationship that once existed between saw-mills and dealers does not prevail at the present time. The dealer is no longer a lumberman, but handles every class of building material, and the so-called side lines have grown to be a big part of his business. Manufacturers of so-called wood substitutes are encroaching on your business and their success to a large extent is due to the cooperation and helps they are giving the dealer. It is up to you as representatives of the lumber industry to help create a demand for your products, or gradually see lumber become a small part of the building material dealer's business. says E. P. Hunter, of Wm. Cameron & Co., Waco, Texas.

I ask you the question: "What are you doing to help create business for the dealer in your territory?" You have behind you the Southern Pine Association, representing the brains and wealth of the southern pine industry. This association can not accomplish anything without your hearty co-operation, and if you individual salesmen will go just one-half as far in helping your association and the dealers as your competitors of wood substitutes, the increase of wood consumption would be enormous. You might say, "what's the use, everybody knows about lumber." Yes, 'tis true, everybody knows something about lumber, and everybody is beginning to know about wood substitutes, and using more of them all the time. Everybody does not know the many uses to which lumber can be put.

Salesmanship has made great progress in recent years, and it is going to take better salesmanship to sell lumber in the future. To some it may seem that real salesmanship will not be necessary in disposing of lumber for several years. The view-point of the live retailer on this subject as expressed by Mr. Hunter is:

When you were able to sell lumber at a cheap price, the cheap price was selling it, not your salesmanship. To-day you are compelled to ask the dealer a price you never dreamed of in your fond dreams ten years ago. You are not giving a better grade of lumber, you are not wrapping it in tin foil, but on the other hand are shipping it in open, dirty coal cars, and in lots of cases thirty days ago the birds were singing in the trees from which that lumber was made. And, worst of all, you are not rendering a service to the dealer. You can't expect to continue to get high prices unless you render a service coupled with your goods. The dealer is going to demand it, and if he can't get it from the sawmill, he can from your substitute wood competitor.

Giving Pointers to the Dealer

The salesman can be a great aid to the retailer. One way of aiding the retailer suggested by Mr. Hunter follows:

The greatest help that you can give the dealer is calling his attention to the wonderful helps offered by your association. Each of you should carry with you a copy of these different helps and call the dealers' attention to them, and see that he orders a supply of these helps right away. Show him how to build a rack in his office to hold these pamphlets, where they will be in full view of every consumer who enters the dealer's office. If ten salesmen call on a dealer and each one calls his attention to these free helps and insists on his using them, it is bound to increase the use of lumber.

Men selling materials which are competing more and more with lumber do not confine their efforts to convincing the buyer that he should put in a stock of the commodity they sell, but such salesmen go out and sell the consumer, sell the architect, sell the financier and sell the individual builder the idea of using their commodities. In this connection Mr. Hunter said:

You know yourself of all building material, lumber can be made the most artistic, most pleasing to the eye, and why not make opportunity of your natural advantage over wood substitutes? The tile man, the brick man, the cement man and every other substitute man is begging the dealer to let them help him. Just one salesman of southern pine has ever mentioned to me the wonderful helps offered by your association and his firm was not a member. It is up to you gentlemen to spread the gospel of good things and helps your association can give the dealer.

How many architects do you call on in your territory? How many architects could you actually name hereabouts? Your substitute wood competitor knows every one of them, and, believe me, Mr. Architect is listening to them. The day is fast coming when homes are all going to be built from plans designed by architects,

and where will Mr. Southern Piner be? You know with cement, tile, steel and hardwood floors a beautiful home can be built, and there may be a little southern pine used for forms, and then again they might use steel forms.

Do Not Always Knock Substitutes

The sale of the so-called "substitutes" does not always mean that less lumber will be consumed in building; in fact, in many cases the sale of lumber can be considerably increased in order to supplement and make more satisfactory the "substitutes." Salesmen can help the retailers to realize this and by suggesting such practices as the following, Mr. Hunter said the lumber salesmen can increase the use of wood:

Mr. Wall Board is coming right here in Mr. Southern Piner's home and selling millions of feet every year. You can't keep wall board out, for they are working with the dealer, but you can impress on the dealer that he could get better results with his wall board if he would insist on the consumer nailing the wall board over shiplap, instead of to the studding, because the house would be better braced, warmer and the wall board would not buckle. That suggestion would be followed by the dealer because he could sell more shiplap. Wall board has come to stay, and it is up to you to make it a decoration, a substitute for wall paper, not a substitute for lumber.

Prepared roofing is increasing its consumption and you should encourage it, because you don't make shingles, and there is more lumber used in solid sheathing a house for composition shingles than where lath and wood shingles are used. What you are after is seeing that more of your product is used.

The Knowledge of Better Methods

The old days of keeping improved methods of doing business a deep secret have passed and to-day retailers are always anxious to learn and to convey to other retailers knowledge of better business methods. The salesmen can help the retailers in this respect, as follows:

You can help the dealer by telling him about the success other dealers are making with modern methods. It is to your interest to see that every dealer has plan books, because it encourages the consumer to build modern homes that are architecturally correct, and these plan books show homes built of lumber—the thing you want to sell. There is a party in Dallas, stockholder in a large sawmill, who has spent a whole lot of time in perfecting plan books of homes constructed of lumber, which he is selling to the dealer, and this party is doing this work for the good of the lumber industry, not for any financial returns. Tell these dealer friends about these plan books, because they sell your lumber for you. "Town and Country Buildings," published by the Southern Pine Association, has these plans.

How many of you inquire of your dealers about the nice homes that are under construction in their towns? How many of you have ever called on an owner who was building a home to impress on him the wonderful wearing power and artistic beauty of edge grain flooring? Those owners are using oak flooring because you have not told them about your flooring. The dealer is not interested in what kind of flooring the consumer uses, because he can make just as much money out of hardwood flooring as southern pine flooring.

Building Garages from Short Lengths

The interest of the salesman by no means stops when the sale is made, and in fact he has a vital interest in stimulating possible markets for the retail lumbermen. Thoughts along this line, as expressed by Mr. Hunter, are:

What effort are you putting forth to show the dealer what a profit he can make building Ford garages from short lengths of lumber? Such a garage was designed by one of our Texas lumber salesmen and the blue prints are for sale by the Southern Pine Association. It is just such salesmen who are giving thought to the southern pine industry and increasing the consumption of wood.

Just sit down some leisure hour and ask yourself what you are doing to increase the use of the product you are selling. Quit studying how you can beat some dealer out of a lumber bill for an oil mill or a compress by shipping direct from the mill, and study how you can help the dealer increase the demand for your product. Gentlemen, it is up to you to carry the message to Garcia.

Drying Oak Lumber Successfully

I have been requested to describe in detail the method followed in regulating our kiln and drying our lumber. This is a pretty big contract, as we vary the treatment for the different kinds and thicknesses of lumber, as well as make allowances for the condition of the lumber when it enters the kiln, says a leading Quebec manufacturer.

To attempt to cover the whole field in one short article is out of the question, and I am afraid that were I to do so those who happen to read this article would in all probability say, "well, he did not tell us anything new, we knew all that before he started."

Oak is a wood that is used to a large extent in the different furniture factories and is one of the woods that gives a lot of trouble in the kiln. I decided that I would tell how to treat this stock in the hope that some of your readers might benefit by the ideas outlined.

There are two things I want to emphasize before entering into details, and they are piling and the time factor. I am a crank on piling, and believe that nearly as much stock is injured by careless piling as by faulty drying methods. For this reason I insist that sufficient time is taken to pile the stock properly. I have had the sticks surfaced so that they are all the same thickness, and see that they are placed exactly above each other. Sometimes with thick lumber I space the plank wider at the bottom of the car. As far as possible we try to load a kiln car with one length of stock, which enables us to place a stick at each end of the lumber so that there are no ends hanging over. The result of this additional care is that the stock comes out straight and flat instead of being full of kinks and bends.

We do not aim to see how quickly we can dry our lumber. If we place 10,000 feet of oak in a compartment that stock is worth anywhere from \$1,500 to \$2,500, and it does not seem worth while risking the whole of that lumber or even a part of it to gain a day or two. Consequently our aim is to dry it as quickly as possible without taking any chances of injuring the stock. The condition of the lumber is our guide, not the time consumed.

We will say that the stock to be dried has been piled outside for about six months. After the kiln has been loaded the first treatment is the steaming. We have a fairly positive circulation and find that about twelve hours steaming at about 110 degrees temperature gives good results. If the stock were thicker we would steam longer. There is a danger of discoloring the material if the steam is kept on too long. After twelve hours of steaming if the lumber is examined it will be found that the steam has penetrated to the centre of the stock and that it is uniformly heated through and through.

With all the steam and moisture in the kiln the air is at the saturation point, or in other words, contains all the moisture that it can hold at the temperature. The next step is to gradually lower the humidity to the desired point, 85 per cent., while at the same time maintaining the temperature at 110 degrees. You will note I said gradually lower the humidity. If this is done too quickly there is a danger of face and end checks appearing, consequently we usually allow 24 hours for lowering the humidity to the starting point.

When the dry bulb registers 110 and the wet bulb 106, indicating a humidity of 85, we are away. Instead of changing the temperature and humidity every twenty-four hours or every two or three days, as some do, we work altogether by the condition of the stock. I have a few test pieces placed conveniently in the cars and test them from time to time. If the surface or end checks appear we increase the humidity in order to check that tendency.

Say the stock showed a moisture content of 70 when we started drying. We would hold the 110 temperature, 85 humidity until the moisture content dropped to 50. When 50 is reached we lower the humidity 10 points and increase the temperature 5 degrees and hold until a moisture content of 40 is reached. At 40 we raise the temperature another five and drop the humidity to 75 and hold until the moisture content is 30. We again increase the temperature 5 degrees to 125 and lower the humidity 5 points this time, and hold until moisture content reaches 25, then change the temperature and humidity each 5 points. The same at every five point drop in moisture content until the test shows a moisture of 5 per cent. then the stock is ready to come out.

When the final stage has been reached the thermometer will read 150 and the humidity will be about 35 per cent. For oak or similar wood we never carry a temperature above 150 and in many cases do not run above 145.

In the last stage we watch the lumber carefully, and if it does not appear to be checking carry the higher heat. When the lumber leaves the kiln we run it into the warm storage shed and let it set and cool for twenty-four hours, or even forty-eight if possible.

This may seem a slow, tedious way to dry the stock, but after all it is results that count.

International Co. Doubles Capacity

Have Erected Comfortable Homes for Their Employees and Carried Out Many Other Improvements

The International Land & Lumber Co., Ltd., Ottawa, of which Roland Hughes is president, and R. N. Bates, vice-president and managing director, have recently constructed a railroad into their mill at St. Felicien, Lake St. John District, Que., and have erected a number of attractive homes for their employees. Other improvements have also been carried out during the past season. The company have placed several jobbers on their limits to get out a sufficient supply of logs for the coming season, and have also put in one camp of their own. They do not anticipate a bigger cut this winter than last, and will probably take out about four million feet.

It might also be added that during 1919, in connection with the development work conducted by the International Land & Lumber Co., the capacity of their mill was doubled, and a dam erected at Lake Clair. Other extensions would have been carried out if help had been available, but this problem is a serious one at the present time, with wages exceptionally high and also the cost of supplies and equipment. Mr. R. N. Bates, Managing Director of the company, has been in England for some time on important business.

The president of the International Land & Lumber Co. is Mr. Roland Hughes, who is a thoroughly practical and experienced lumberman. A Canadian by birth, he went to Michigan many years ago and spent a long period in the lumber activities of that state, handling the entire bush-work of one of the largest concerns, and afterwards working in the sawmills. He became chief sawyer, millwright, mill foreman, and latterly built mills of his own which he operated till a few years ago, when he sold out and joined the directorate of the International Land & Lumber Co., Ltd. Mr. Hughes, who was elected to the position of president about a year ago, succeeding the late J. L. Bates, has taken much interest in the development and expansion of the company, and his advice has been at all times sound and progressive.

Mr. R. N. Bates, vice president and managing director of the company, has occupied that position for the past twenty-one years, when the International Land & Lumber Co., Ltd., was formed. He has been identified with a number of successful organizations, and his executive ability is widely known.

How Cold Weather Hit Coast Mills

A recent despatch from New Westminster, B. C., says: The continued abnormal cold snap is beginning to interfere with industrial activities. Several of the sawmills on the river have suspended Canadian Western Lumber Company's plant, the Brunette Sawmills, and the Small-Bucklin Lumber Company's mill are all shut down. Some of them are making their annual overhaul, which as a rule is done in January. The Timberland Lumber Company's mill across the river is still running, blasting the ice to free the logs. Most of the logging outfits in the woods are tied up.

Counties Ask Aid in Reforestation

The Council of Clarke township and the Counties' Council of the united counties of Northumberland and Durham have both taken up the question of reforestation. Both bodies have adopted formal resolutions calling upon the Ontario Government to adopt a definite policy of reforesting lands which have been proved unsuitable for agricultural purposes, and the Counties' Council have asked that a beginning be made on the sandy ridges of Northumberland and Durham.

Put Advertising on the Payroll

If you were to add a salesman to your pay-roll—put on a man to call on prospects, to develop old business and cultivate new—you know what advantage it would be in dollars and cents. Why not put advertising on your payroll? It goes regularly to prospective customers. It suggests uses of lumber, creating new business. Very often it reaches the reader under more favorable circumstances than a salesman might. Use it—judiciously and consistently.

B. C. Mill Cut Houses for England

One of the great objections in England to the wooden house is that, it will cost approximately the same as a brick house. Mr. Wade, Agent General in London for B. C., declares that this can be overcome by quantity production. In a letter to the London "Times" he condemns official prejudice, and maintains the ability of British Columbia to supply the timber. Several samples of British Columbia mill cut houses will, he states, arrive in London shortly to demonstrate their excellence. The "Times," in a short letter, warmly supports Mr. Wade's policy and proposals.

Activities of International Land & Lumber Company, Ottawa

Breezy Notes From the West

J. A. Braley has started his mill at Roosevelt Valley, B. C., and has orders already for the entire output.

A charter has been granted to the Cranbrook Sawmills Limited with headquarters in Cranbrook, Ont.

Cushing Bros. Limited, of Calgary, Alta., have sold their Fort Saskatchewan branch to the Frontenac Lumber Co. Limited.

William Lukens will erect a new saw mill at Palling, B. C., where he owns considerable land on which there is a fair stand of timber.

The lumber mill of Moore and Whittington on the upper harbor, Victoria, B. C., was gutted by fire recently. The loss was estimated at \$90,000.

The Keystone Logging Co. of Silverdale, B. C., recently lost one of their locomotives in the wreck on one of the steep grades along their logging line.

The Beemas Lumber Co. have removed their business from Vancouver to Seattle and are now conducting all their sales on the American side of the line. M. A. Stevens is the manager of the Beemas Lumber Co.

The Nasmyth Shingle Mill, which was recently started in West Vancouver, was completely destroyed by fire. The loss is estimated at \$10,000. It is the intention of the company to rebuild the mill as soon as possible.

Recently two lumber dealers from Australia visited the vast spruce areas of Northern British Columbia with an idea of going more extensively into the spruce handling business.

Messrs. Stevenson, Chapman and Macdonald, who are at the head of the recently formed Telkwa Lumber Co. at Telkwa, are erecting a saw mill. The equipment has arrived and the company expect to start cutting within a short time.

Construction of the main buildings of the B. C. Manufacturing Company, plant No. 2, is now under way, and this additional plant, which is designed to have twice the capacity of that now in operation, will be in a position to make fruit boxes for next year's season.

The lumber mill of Moore and Whittington, on the upper harbour, Victoria, was gutted by fire recently. The loss was estimated at \$90,000. The blaze originated in the planing mill, and within a few minutes the main part of the works was ablaze. Much lumber was consumed.

It is announced that a tunnel will shortly be bored through the mountain to tap Victoria Lake half a mile away from the Whalen pulp plant at Port Alice, B. C. 500 persons are now employed at this plant, which turns out 70 tons of pulp a day and 200,000 ft. of lumber. The power is at present steam-developed.

The construction of five new wooden sailing vessels in Victoria yards, rendered necessary by the present shortage of tonnage for lumber, is part of the plans of the Cameron-Genoa Mills of Vancouver Island, it was announced by J. O. Cameron of Victoria, president of the lumber company.

The old exhibition buildings in Winnipeg are likely to bring a big price. The civic committee was told recently by a building inspector that the lumber was now worth more than was originally paid for the material. One alderman stated that he knew of lumber bought 32 years ago, which was selling for more to-day than it actually brought then.

Government royalties on cut timber and logs in the Province of British Columbia will be increased to the extent of thirty-seven cents per thousand feet this month, according to an announcement made by Hon. T. D. Pattullo, Minister of Lands. This increase is based on the average wholesale selling price of lumber throughout the province during the past five years, and will be made in accordance with the provisions of the Timber Royalty Act.

It is understood that the Forest Mills Co. will shortly resume operations at Revelstoke and upon Kootenay Lake upon a very much enlarged basis. It is rumored that their plans include the construction of several new sawmills with large producing capacity and which will afford employment to at least 1,500 men. The company will reorganize and W. A. Anstie, managing director, will leave for London early in January for the purpose of conferring with the owners.

New Sulphite Plant Starts at Kipawa

The Kipawa Fibre Co. is now operating at South Temiskaming, Que. This organization, which is a subsidiary of the Riordon Pulp & Paper Co., is turning out bleached sulphite pulp, and as soon as the plant is operated to capacity, 130 tons a day will be produced. It is announced that the company has already under consideration

plans for the installation of another unit of equal size, and that ultimately the company will have five units of the same size as the first one, which was installed with the fixed object in view of adding others. It is probable that one unit will be added each year. The company control available timber limits, which are tributary to the waters utilized in the generation of electric power to operate the plant. The C. P. R. branch from Mattawa to Kipawa conveys supplies directly to the plant and hauls the product away, while there is also boat connection on Lake Temiskaming with such points as Haileybury and New Liskeard on the T. & N. O.

Death of Former Sawmill Owner

There passed away recently at the age of 82 years at Utterson, Ont., Erastus Hanes, one of Muskoka's earliest pioneers, he having come to that district as a young man with his parents in the year 1862, settling in what is now Utterson, but at that time without a name, where he made his home ever since. In 1869 he married Miss Harriet J. Long, who predeceased him seven years. In his younger years Mr. Hanes was a surveyor and worked for the Beatty's for many years. He built and operated for several years the large lumber mill at Buck Lake. He was postmaster for Utterson for nearly 30 years. Mr. Hanes knew by experience the hardships and discouragements of life in a new country, having with many of those early pioneers to carry their provisions on their backs all the way from Orillia.

Shipbuilding in Canada has Increased

A great development in Canadian shipbuilding during the war is shown in the report of Lloyd's Register of Shipping for 1918-1919, according to which construction has increased from eighteen vessels in June, 1914 to fifty-nine under survey at the end of June, 1919, with corresponding tonnages of 14,184 and 155,542. The Minnedosa, 13,972 tons, of the Canadian Pacific Ocean Services heads the list of the five largest vessels which received the society's classification during 1918-1919.

The report states that the United States showed the largest increase in shipbuilding of any country during the period covered, and that Japan came second.

Nashwaak Company Close Splendid Season

The Nashwaak Pulp & Paper Co. of St. John, N.B., say in connection with the proposed erection of a new plant at Marysville, that the whole question rests very largely upon labor conditions as to how rapidly they will progress with the new venture. The company recently purchased a site at South Devon to be used at such times as they may desire. The new dam of the company at Marysville is now completed. Hon. N. M. Jones, manager of the Nashwaak Pulp & Paper Co. states that, should they build at South Devon they will develop electric power at this dam for use at the mill. The sulphite market, they find, is pretty active at the present time with a supply about equal to the demand. The company have had a very satisfactory season.

Real Problem is Getting Enough Logs

The New Ontario Colonization Co. of Buffalo, N.Y., whose land office and mills are at Jacksonboro, Ont., state that the past season has been a rather strenuous one, and that they were kept busy throughout the year getting to the mill only an ordinary stock of logs. They had no trouble in disposing of their products at fair prices. In connection with getting logs to the plant and also in converting the same into lumber costs have been very high. The New Ontario Colonization Co. have shipped out all the pulpwood which they rossed during the past year. Their sawmill and rossing plant have been shut down for the season, but the planing mill is still running. The company have all the men they can get hold of, putting out both logs and pulpwood, and state that the settlers are getting in shape to be of some assistance in this work.

The outlook for 1920 is considered good, but the real problem is to get a sufficient stock of logs to enable the company's mills to turn out all the production that they should. The New Ontario Colonization Co. are enlarging their planing mill and finishing department, which will add considerably to their capacity.

Proposed Forestry Patrol by Air

Captain Hobbs, of the Canadian Air Board, left recently on the patrol ship Stadacona, to survey the southern British Columbia coast for possible sea-plane basis in connection with a proposed forestry patrol by air. With him were two provincial Government foresters and district engineer Woortstfield of the Department of Public Works.

What Safety Means in All Woods Operation

It Implies Caution, Exactness and Accuracy in Judgment—The Success of Electric Signal in Evolution of Logging on the Pacific Coast

The improvements and changes in the system of logging which have taken place during the past twenty years, especially on the Pacific coast have been marvelous, says the "Disston Crucible." From bull-team to steam donkey; from line horse to haul-back; from skid-road to railroad; and from ground logging to high lead are all improvements with which every logger is familiar, even though the full significance of those advantages is not always appreciated. Not only out on the works but also in the cook-house and bunk-house has evolution made its mark. Economy has taken the place of waste and extravagance in the kitchen, and fresh meat and vegetables and rich pastry the place of pork and beans and molasses in the dining room. Many a logger in the woods today can remember, only a few years back, when he crawled head first into the muzzle loader bunk, with a layer of hay and some blankets in it and proceeded to make himself comfortable.

Even at that a man could get a fairly good night's rest on a bed of this kind if the game was not too plentiful. Chiefly, this game consisted of a little animal that inhabited almost every camp and generally made itself pretty much of a nuisance. It was commonly known as the "seam squirrel," but during the war the name of this animal underwent a change, and it is better known now as "cootie." However, there is not much in a name and as far as the logging camp is concerned this species has become almost extinct. He is not a progressive animal and he could not stand the pressure of the bath houses, hot water and soap, wash rooms, drying rooms, electric lights, steam heat, steel framed bunks and other improvements which we find in the camps to-day.

There Must be Safety With Speed

Modern logging methods are not complete without the equipment that insures speed and safety. In the great transformation which has taken place the average successful logger has only to be shown that a new system is an improvement over the one in use, and he will immediately adopt it. Some few loggers have not as yet adopted the high lead, but cling to the old custom of ground logging. While in some localities the ground system may be advantageous, nevertheless there is ample proof of the advantage of the high lead. Few, if any, once giving the high lead a fair trial, have ever gone back to the old way.

Among other modern improvements, and it may be added, modern conveniences, which have made their advent into the logging game is the electric signal system. It is, without a doubt, one of the most essential articles in the operation of modern logging. With the old "jerk wise" system the whistle punk generally stood about three or four hundred feet away from the donkey; if he went any further his jerk-wire would not work satisfactorily. The rigging crew often worked twelve or fifteen hundred feet away, and the signals had to be transmitted by lung power from the rigging crew to the whistle punk and from there to the engineer by "jerk-wire," providing the wire did not break. In the event of it breaking it is hard to say what might happen, but if the engineer heard one short blast of the whistle he would "open her up" and go ahead on the main line and keep going until his attention would be drawn to the whistle punk or some of the rigging crew came bounding through the woods frantically waving his arms for him to stop. Then if there was no damage done, the rigging crew would sit down and wait for the whistle punk to get his wire connected up again.

In yarding logs the engineer can seldom see the crew working around the rigging and his actions are governed entirely by the whistle signals. Men take chances in the woods; they depend on every member of the crew doing his part at the proper time and in working around the rigging men are often placed in such a position that a wrong signal or a wrong move may mean disaster. That is why the electric signal system is popular with both operator and worker; besides being a time and money-saver, it saves lives and avoids accidents; gives better results and makes the work easier for the crew. Instead of the whistle punk having to look for trees to hang his wire on he simply carries the coil in one hand and the signal handle in the other, and he can follow the rigging crew, playing out the wire as he goes along; in this way he is in close touch with the work and can see and hear what is going on, which naturally insures speed and accuracy; increases the output and decreases the cost of logging.

"Safety first" is being continually advocated, but not always

practiced. Accidents happen; men are hurt, crippled, or killed; machinery destroyed and money lost. But still they happen. Sometimes they seem unavoidable and sometimes they appear to happen through carelessness, but never are they intentional (unless through acts of sabotage, but that is another question). However, in every case something or some person is responsible for the occurrence, and if every accident was thoroughly investigated and steps taken to eliminate whatever or whoever was responsible, the number of accidents would be greatly reduced. Often the blame falls in the wrong place and quite frequently the blame falls on the injured victim when he may be innocent.

This recalls to memory an accident which the writer witnessed a few years ago. That was before the high lead was in use, and at that time the chaser was a real workingman. He chased not only the fair sex when he was in the city, but logs and rigging when in the woods. He followed the rigging when it was going back into the woods to see that the chokers didn't become unhooked from the bull-hook and get lost, and he followed the log out to the landing to see that it did not get hung up, and to change the rigging at the bull-hook and to unhook chokers at the landing and send them back to the rigging crew, and if he didn't keep the line moving he would have the hook-tender on his trail.

In this case I recall the log hung up on a stump and the chaser motioned the whistle punk to signal the engineer to stop. After he had got some slack and changed the choker so as to pull the log from where it was caught the choker would not stay in place, so he had to hold it until the slack was taken out of the line and a strain put on it. He could not see the engineer from where he was and he yelled to the whistle punk to "go ahead slow;" the signal for this is three short blasts of the whistle, but at the first jerk the wire broke and the engineer got one blast, which means "fullspeed ahead," and be "opened her up." The choker being set back a few feet from the end of the log it was up-ended by the sudden pull and swung around, hitting the chaser and breaking his arm.

Fortunately the man was not killed or even knocked unconscious. Had he been he would not have heard the good advice that the hook-tender had to offer, as follows: "A man should never give a signal until he is well out of reach of everything, and he had no business taking such a chance." That was indeed good advice. Every logger knows that he should not take chances, but I'll venture to say that with the old ground yarding system there never was a man who followed the game long enough to qualify for a hook-tender who had not, more than once, taken the same chance that this man had. The hook-tender was also wrong in saying that he had no business doing what he did. It was the chaser's business to get the log from behind the stump and get it out to the landing, and under the conditions he did the logical thing, but it was the signal system and not the man that was at fault.

Safety first does not always mean only to be cautious, but it means to be exact and accurate in our judgment; to be ingenious and skillful in devising and putting into use systems and machinery which will eliminate accidents. From its first advent into the industry the electric signal was deemed a success, but through a continuous persevering application of ingenuity it has developed into an article of primary importance and some credit is due the inventors and promoters who have made it valuable for getting out logs.

Another big timber deal has just been completed in Nova Scotia. The transaction involves 15,000 acres of land in the counties of Pictou, Antigonish, Colchester, and Hants. It is estimated that there are forty-five million feet of lumber in the acres. The properties were owned by Rood and McGregor, Ltd., of New Glasgow, and the deal was put through by D. J. Purtill of Halifax. The Nova Scotia Steel and Coal Co. have purchased the areas in Pictou County which are at Sunny Brae.

One of the largest transfers of most valuable timber limits that has taken place in Nova Scotia for some years has just been completed, in which D. J. Partill, of Halifax, arranged with Rood and McGregor, Limited, for transfer of 15,000 acres of valuable timber property. This land is situated in Pictou, Antigonish, Colchester and Hants counties and is estimated to be the richest lumber property in the Province.

Changes in Shingle Selling Methods

Plans for Their Packing and Sale by the Square Adopted
by Congress Which Met in Seattle

Plans for the packing and sale of shingles by the square, raising of the association dues and the growth and stronger footing of the organization in the industry were adopted at the third annual shingle Congress, held in Seattle, Wash., recently. It was urged in favor of the change in the selling method applied to shingles that the buyer could much more accurately measure his needs if the surface to be covered was matched with known quantities.

Discussion of the square measure project evolved from the speech of Secretary J. S. Williams, of the shingle branch of the West Coast Lumbermen's Association. There were approximately 200 shingle manufacturers present from all representative districts of Washington, Oregon and British Columbia. The assembly was pronounced the most typical of any yet held.

Secretary Williams, in urging the change in standards of selling shingles, said that the trade had outgrown the practice established when shingles were the only roofing material. During the past year, however, he said, prices of shingles have risen to a point where the selling price unit exceeds that of their principal competitor.

The speaker said a questionnaire sent to all secretaries of the retail associations on the project with the request to poll the retail yards resulted in 50 per cent. favorable, 30 unfavorable and 20 neutral. Those unfavorable said the difficulty would be to educate buyers to the change.

President William McMaster, of the shingle branch, and dean of the shingle industry, in an address favored the change to the square basis. The general feeling as expressed by members of the congress favored the change, and it was finally adopted officially without formally referring the matter to a referendum vote.

Windsor Lumber Firm Branching Out

The Windsor Lumber Co., Ltd., of Windsor, Ont., are making extensive additions to their premises owing to an increase in business. More office and warehouse space is being provided and a building 30 x 110 ft., two stories high, is being erected. About half of the ground floor will be used for offices. The balance of the space and the upper floor will be employed for the storage of flooring, mouldings, doors, etc. Facilities are provided for unloading out of the cars at the end of the building and loading on to trucks or teams along the side. A roof will be built over the driveway along one side so that the material will be sheltered from the weather. In addition to the two large sliding doors on this side, small doors have been provided with the sill about waggon high, so that materials can be passed out at convenient points. The walls are brick and the material of standard slow-burning mill construction. Work is progressing favorably on the building, of which Wells & Gray Ltd., Toronto and Windsor, are the engineers and contractors. J. C. Scofield is the manager of the Windsor Lumber Co., and is also one of the directors of the Ontario Retail Lumber Dealers' Association.

Development of Ontario Housing Plan

There is some speculation regarding what the new Ontario Government will do about the housing scheme.

There are ninety-eight municipalities of Ontario, 1,500 new house-owners, 5,000 prospective house-owners, and an uncalculated body of public opinion hoping that the Government will press the housing scheme to a greater success than ever.

To date Ontario has appropriated \$10,600,000 for building of houses under the Housing Act in eighty-two Ontario villages, towns and cities.

Applications are now in the hands of the Government for further appropriation of \$8,500,000, making the total proposed expenditure in loans to house-builders over \$19,000,000.

How better could \$19,000,000 be used by the Province than in loaning it to citizens at five per cent. for the establishing of homes? That is the question that will determine the new Government's action.

Toronto does not come under the Housing Act. The city decided to do its housing on its own. The remainder of the province is covered by the Ontario Housing Act.

Many Extensions Being Made by New Firm

The Pas Lumber Co., Ltd., has succeeded the Finger Lumber Co., which has been in business for many years. The officers of the Pas Lumber Co. are President, D. N. Winton, Minneapolis; Vice-Pres., C. J. Winton, Minneapolis; Treas., Alvin Robertson, Minneapolis; Secretary and Manager, A. L. Mattes, The Pas, Man. Mr. Mattes expects to reside in Winnipeg, and is opening an office in that city at 506 Electric Chambers. He will, however, spend a good

deal of his time at The Pas during the coming year, where a large number of important changes in the plant are being made. The saw-mill is being enlarged and the capacity increased from 25 million to 50 million feet per year. The planing mill will also be correspondingly increased. The entire plant will be equipped with an automatic fire sprinkler system. Construction work on a large new boarding house and a large number of employees' dwellings starts as soon as the weather permits, next spring. When the improvements under consideration are completed the company expect their Pas plant will be one of the most up-to-date in Canada.

A Strong Factor in Export Trade

John Forsyth Burstall of J. Burstall & Co., lumber exporters and shippers, whose offices are in Dalhousie St., Quebec, is one of the most widely known members of the industry in the ancient capital. Mr. Burstall, who was born near Hull, England, in 1866, started in business with I. Burstall & Co., Quebec, in 1884, and has been en-

John Forsyth Burstall, Quebec, P.Q.

gaged in that line ever since. He completed his education in Quebec and Cheltenham, Eng., before launching out on his chosen career. Mr. Burstall has few interests outside of business, and one of these has been along the military line. He served with the 8th Royal Rifles for eight years, and retired with the rank of captain. He resides in Saint Louis Road, Quebec, and is one of the solid, progressive citizens of that city.

"Own Your Home" Will be Observed

A recent despatch from Chicago says:—"Own Your Own Home" Day is one of the eight days of "National Thrift Week" which will begin January 17, Benjamin Franklin's birthday. The Thrift campaign is to be conducted by the Y. M. C. A. and will be nation-wide. A catalogue of campaign supplies—posters, window display cards, motion picture trailers, etc., will be sent to each local committee connected with the campaign. Not only is the project patriotic and not only is thrift now one of the country's most vital needs, but from a business viewpoint, the campaign will make a strong appeal. Especially as a result of boosting the "Own Your Home" idea should many trades and professions benefit—building material merchants, building, electrical, heating and plumbing contractors, architects, fire and life insurance men, real estate dealers, furniture dealers, bankers, lawyers, hardware merchants, painters, masons and many others.

Incorporated Under New Name

The Alaska Bedding Companies of Montreal, Winnipeg, Calgary, and Vancouver; the Ideal Bedding Company Limited, of Toronto; and the J. H. Sherrard Manufacturing Company, Limited, of Montreal, have discontinued doing business under these names, and are now operating as one company, incorporated under the Dominion Charters Act, with the name and title of Simmons, Limited, Montreal. The business will continue under the same management.

The Pictou limits have been purchased by the Nova Scotia Steel and Coal Company. The remainder has been retained by Mr. Purtil in conjunction with J. C. Purdy, R. B. Atkinson of Amherst and J. T. Cornell, of St. John.

BOATS FOR THE SPRING DRIVE

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 20 cents per agate line (14 agate lines make one inch). \$2.80 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Birch Wanted

No. 1 Com. and Bet. 4/4 to 16/4". Name best prices delivered Philadelphia, Pa. rate. Warren Ross Lumber Co., Jamestown, N.Y. 1-4

Lumber Wanted For Cash

Will pay Spot Cash soon as on the cars for Maple, Birch, Elm, Basswood, or Beech, dry or new cut. Inspection at shipping point. Box 89, Canada Lumberman, Toronto. 1-2

Birch Wanted

WHITE BIRCH TIMBER. If you are able to get this material write us full particulars. Highest prices. Keenan Bros., Limited, Owen Sound, Ontario. 1

WANTED—Coffin Elm Lumber

Advise quantity you can get out if price made satisfactory. Stock can be taken green from the saw.

KEENAN BROS. LTD.,
1-2 Owen Sound, Ont.

Elm Wanted

Rock Elm Billets in car lots of the following dimensions:—3 1/4" thick, 3 1/2" wide, 5' long; also 3 1/4" thick, 4", 6" and 9" wide, 7' long. Must be good bending stock. Delivery summer of 1920. Quote prices to the St. Marys Wood Specialty Co., St. Marys, Ont. 1

PULPWOOD

We are open to purchase peeled Spruce and Balsam Pulpwood in carload lots. Quotations furnished on request. Also Deal ends.

The Jost Company, Limited,
285 Beaver Hall Hill,
1-t.f. Montreal, P.Q.

WANTED Delivered St. Catharines

1 car 2 x 8—12-16 ft. } half each S1S1E.
2 x 4—10-16 ft. }
1 car Mill Cull, 1/2 car S1S, 1/2 car Shipap.
1 car B. C. Cedar Shingles, XXX.
2 cars Cedar Fence Posts, 3 1/2" to 5" peeled.
Dry, 8 ft.

Terms spot cash. Address A. K. Wismer, 83 Dufferin St., St. Catharines, Ont. 1

Crating Wanted

A quantity 1" and 1 1/4" dry Box and Crating Lumber, White Pine, Spruce or other soft woods, good widths and lengths. Quote price delivered F.O.B. cars Syracuse and Rochester, N.Y. or point of shipment. State amount you have of each kind, etc.

Advise if you can dress and resaw.
Wilson & Green Lumber Company,
1-4 Syracuse, N.Y.

For Sale—Lumber

SPRUCE KNEES FOR SALE

150 Grown Spruce Knees, 4' x 3' 6", finished 8', 9' and 10" thick; thoroughly sound, ready for immediate delivery. For particulars, apply A. K., Box 78, Canada Lumberman, Toronto. 4

Piling

We can furnish Piling, any length or size, on short notice.

WM. POLLOCK & SON,
23-2 Englehart, Ont.

PULPWOOD FOR SALE

Ten thousand cords of pulpwood for sale; next summer delivery. Shipping point, Blue River, Canadian National Railway. Apply to

QUEBEC LUMBER CO.,
Phone 329 98 St. Peter Street,
22-25 Quebec, Que.

FOR SALE Hickory Specials

100 M pcs. 7/4" Dowels, 48" long.
20 M pcs. 1" Squares, 48" long.

Also some shorter stock. All high grade, second growth Hickory. Can ship immediately. Will sell cheap. Address Box 81, Canada Lumberman, Toronto. 1

Dry Lumber For Sale

Shipment latter part of March and later.

430 M 8/4 Hemlock.
175 M 4/4 Hemlock.
160 M 4/4 Birch and Maple.
100 M 4/4 Basswood.

Address Box 83, Canada Lumberman, Toronto. 24-1

Rock Elm

For Sale—A quantity of small Rock Elm in round. For further information enquire of

FRED H. DOUGALL,
1 Merrickville, Ont.

Wanted—Machinery

Band Mill Wanted

1-7 ft. Double Cut Band Mill. Give description and condition, also price. Box 80, Canada Lumberman, Toronto. 24-1

Re-Saw Wanted

WANTED—Fischer "Little Giant" Re-saw. Must be in good condition and cheap for cash. Quote price to St. Marys Wood Specialty Co., St. Marys, Ont. 1

WANTED

Good Alligator Engine

complete including double propellers, with or without usual tackle. Give full particulars.

W. C. EDWARDS & CO., Ltd.
24-3 Ottawa, Ont., Canada.

Sawmill Wanted

A second-hand sawmill and machinery, comprising Circular Gang Saw, Band Re-saw, Lath Mill, Edgers, Butters, Log Jacks, in fact a complete outfit with daily capacity of from 30,000 to 50,000 feet; also second-hand Dutch Oven type Boiler, 100 H.P., and Engine 70 to 90 H.P. All to be in good condition and for immediate sale. Reply to Box 86, Canada Lumberman, Toronto. 1-2

For Sale—Machinery

Good second-hand Hockey Stick Bending Machine for sale. Apply J. H. Still Mfg. Co., St. Thomas, Ont. 23-2

Lath Machinery

1 Lath Machine, 1 Bolter, iron frame, strong, good order, with all saws. P. O. Box 5, Papineauville, Que. 24-3

Engine For Sale

One Goldie & McCulloch Engine, 16" x 38", complete with heater, pipes, oil pump, etc., in first class condition.

R. Laidlaw Lumber Co., Ltd.,
1-4 65 Yonge St., Toronto.

Saw Mill For Sale

One Steam Saw Mill, gun shot feet. Capacity 18,000 ft. to 20,000 ft. per day. In good condition.

Fletcher Pulp & Lumber Co.,
1 Sherbrooke, Quebec.

Steam Plant For Sale

First class steam plant for saw mill. Boiler nearly new, 110 H.P. Engine 60 H.P., in first class shape. Also smokestack and all steam and water connections. A snap if taken immediately. Apply George A. Oldrieve, St. Thomas, Ont. 1-t.f.

FOR SALE

One Watrous double cut Band Mill Complete.
One steam Log Loader.
One steam Kicker.
One Watrous Nigger, 10 and 8" cylinders.
Two Air Cushions.
One 10" Steam Feed, 36 ft. cylinder.
One steam set works, Carriage Wheels and Track. Also a number of steel and wood pulleys, live rolls, etc.

For full information apply Box 74, Canada Lumberman, Toronto. 23-2

Wanted—Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents.

WANTED—By a young man who is desirous of changing his present position. An opening as salesman or manager of retail yard. Box 86, Canada Lumberman, Toronto. 1-2

WANTED A POSITION with some wholesale firm as salesman in Ontario; could also inspect and make reports on soft wood stocks if required. Box 84, Canada Lumberman, Toronto. 1-2

YOUNG MARRIED MAN anxious to secure position giving opportunity of advancement in lumber business. Have already had some experience. Can furnish the best references as to character, etc. First class education. Box 505, Canada Lumberman, Montreal, Que. 23-24

TO LUMBER OPERATORS—I am open to consider position as manager of woods operations, sawmill or selling force; experience in hardwoods in the United States and in New Brunswick Spruce. Can handle men and get results. Box 84, Canada Lumberman, Toronto. 24-1

WANTED POSITION by representative and superintendent, still employed with large wholesale firm, with twenty-five years' experience in the lumber business. Can give reference as to capabilities and take charge on a month's notice. Box 87, Canada Lumberman, Toronto. 1-2

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 20 cents per agate line (14 agate lines make one inch). \$2.80 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Wanted—Lumber

Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 8-t.f.

Spruce and Shingles Wanted

We are always in the market for Spruce boards and 2 in., also Furring, Lath and Shingles.

RICE & LOCKWOOD LUMBER CO.,
1-4 Springfield, Mass.

Maple and Spruce

Wanted stock lists and quotations on end dried, white quartered and straight grained action Maple, four and five quarter, also Spruce Lath and Furring, bundled. Box 70, Canada Lumberman, Toronto. 23-2

Wanted Lumber

Hardwood lumber wanted. Birch, Maple, Ash, Elm, Basswood, and other hardwoods. Dry or sawn to order. We send inspector. Apply Box 97; Canada Lumberman, Toronto. 1-4

Basswood and Maple Wanted

Fifteen carload dry 1sts and 2nds or No. 1 Common and Better white winter cut Basswood, plump 1 in. thick.

Twenty carloads dry hard Maple, 1 1/4" x 3 1/4" multiples of 9" and 12" in length, one clear face and square edges.

Twenty carloads Hard Maple, 6 1/2" x 6 1/2" and 5 1/4" x 5 1/4" x 22" and 26" in length or multiples, practically clear stock and free from checks; can ship green.

For further particulars apply to Box 85, Canada Lumberman, Toronto. 24-t.f.

Wanted To Buy LATH

We are in the market for a large quantity of Lath, including No. 8 grade and 32 in. for immediate shipment or will contract for output. Paying good prices and cash on receipt of B/L.

What have you to offer? Send good description, quote F.O.B. Chicago; state quantity offered.

COVEY DURHAM COMPANY,
431 South Dearborn St.,
24-3 Chicago, Ill.

Wanted-Employees

WANTED—a First-class, experienced Kendall Gang Filer; good opening for the right man. Apply at once to Davison Lumber & Mfg. Co., Ltd., Bridgewater, N.S. 24-3

CAPABLE MAN to take full charge of fast feed matcher. Must do his own setting up and grinding. Out of city position; state age, experience and salary expected. Address Box No. 92, Canada Lumberman, Toronto. 1

FOREMAN REQUIRED to take full charge of double cut band mill, yearly position; man with snap and who can give results wanted. How good he wishes to make his position will depend upon himself. State age, experience and salary for commencement. Address Box 93, Canada Lumberman, Toronto. 1

WANTED—Experienced Sawmill men and lumber handlers. Sawyers, Setters, Edgermen, Trimmermen, Filers, Lumber Pilers, Lumber Graders. Address,

THE PAS LUMBER CO., LTD.,
The Pas, Manitoba.
Formerly The Prince Albert Lumber Co.,
1-8 Prince Albert, Sask.

Salesman Wanted

Must be first-class and have good connection with the Lumber Trade in Ontario, Quebec and Maritime Provinces. One well posted in British Columbia woods preferred. Apply, in confidence, giving full information as to qualifications and salary required, to Box 82, Canada Lumberman, Toronto. 24-1

Business Chances

Saw Mill Plant For Sale

Practically new and modern Saw Mill Plant, capacity about 30 Million feet per annum, located in the Interior of British Columbia on a beautiful inland lake and on the main line of the Grand Trunk Pacific Railway. About 500 Million feet of timber on and adjacent to Lake (about 90% Spruce) and another Billion feet available at reasonable prices. Natural conditions ideal for economical logging, manufacturing, piling and shipping. An advantage of about \$4 per thousand feet in freight rates to the Prairie Provinces over Coast shipments. This property offers unlimited possibilities as a lumber, pulp and paper property. Would consider selling a half interest. Terms reasonable.

A. C. FROST COMPANY,
134 South LaSalle Street,
5-t.f. Chicago, Ill.

Auction Sale of Valuable Quebec Timber Limits

R. H. Klock & Co., through W. A. Cole, Auctioneer, on the Nineteenth day of February, 1920, at the hour of three o'clock p.m., subject to one reserve bid, will offer for sale by Public Auction at the Russell House in the City of Ottawa, in the Province of Ontario, timber berths numbers 176 and 177, Kipawa, are 100 sq. miles more or less. These timber limits contain large quantities of pine, spruce, and other wood goods. For further particulars apply to James B. Klock, 70 St. Matthew St., Montreal; Errol M. McDougall, K.C., Royal Trust Building, Montreal; D. B. Rochester, 145 James Street, Ottawa, and W. A. Cole, Hope Chambers, 63 Sparks Street, Ottawa, Auctioneer. 21-26

PRACTICAL LUMBERMAN with ten thousand dollars to operate valuable Timber Berth. Unusual opportunity for suitable man or will sell the property. Box 99, Canada Lumberman, Toronto. 1

Timber For Sale

3,000 acres Crown Right Virgin Timber in Ontario. Birch, Hemlock, some White Pine, Basswood, Elm. Warren Ross Lumber Co., Jamestown, N.Y. 1-4

For Sale

Fine industrial site, situated near western boundary of Ottawa, Ont. Good property for almost any industry. Mill and storage buildings almost new, with some shafting erected. Five hundred feet siding on C. P. R. If interested apply Box 55, Canada Lumberman, Toronto. 22-1

TIMBER LIMITS

I have a number of good Timber Limits for sale. Particulars, Wm. Cooke, Stair Building, Toronto. 20-t.f.

WANTED

To correspond with mills baling softwood chips from logging operations, also baled shavings from planing mills, and clean dry fine hardwood sawdust. Box 68, Canada Lumberman, Toronto. 23-2

For Sale

Sash and Door Factory and Planing Mill, located in one of the busiest and best towns in eastern Ontario. Correspondence solicited. Box 66, Canada Lumberman, Toronto. 23-t.f.

TIMBER LIMITS

We have some very attractive offerings in Standing Timber, Cedar or Spruce, in Alberta and B. C., with or without sawmills. Loughheed & Taylor, Ltd., Calgary, Alberta. 24-3

Timberland For Sale

Let us prove that we have the best timber proposition on the Pacific Coast; \$30,000 cash takes it. Hollis R. Anderson, Fort Jones, Calif. 24-3

Saw Mill For Sale

For sale, Prince Albert, Saskatchewan, mill, two side saw-mill with large gang, planers, lath, machine shop, burner, rails and cars, engine, boilers, stacks complete. Capacity 180 M. ten hours. Splendid condition. Apply McLaren Lumber Co., Blairmore, Alta., or 96 Sun Life Bldg., Toronto. 1

For Sale

One million and half feet heavy hardwood timber, Maple, Beech, Basswood, Birch and Rock Elm. Also 25 acres heavy Cedar Swamp. Also Sawmill, 44 x 84—20 ft. high. 7 Bents, all 10 inch square. R. Elm Timber make good barn. All good machinery, nearly new, about 8 miles from loading point. Apply Samuel Leggatt, Gibraltar, Ont., Ravenna R. No. 2. 24-3

Wanted

MAN RESIDING IN TORONTO, who has had experience in the manufacture of Sash and Doors, etc. Applicant must have best of references, and willing to invest \$5,000.00 in the business, which has been established for 12 years, and doing a good shipping business to Toronto and elsewhere. Applicant must agree to do the selling and collecting for the city of Toronto. Write Box 95, Canada Lumberman, Toronto. 1-2

A Real Bargain!

The Timber and Logging Outfit of a going concern can be had at a bargain—to close up a partnership deal where division is impossible.

There are some 125,000,000 feet of hardwood timber, of which 40% is extra fine quality birch; 25% maple; balance—spruce, cedar and pine.

Location is within 30 minutes by automobile from Sault Ste. Marie, with rail and water shipping facilities.

This is a real bargain. Address—
JOHN C. SPRY,
1003 Harris Trust Bldg.,
2-2 Chicago, Ill.

Miscellaneous

For Sale

Complete dry-kiln outfit for two kilns, 100 feet long. Guaranteed. Gilpin Bros., Wiar-ton, Ont. 24-1

Car Wheels For Sale

125 pairs 18" chilled cast iron wheels, fitted to axles with roller bearing. Suitable for piling cars or tram line.

58 Front Street W.,
22-3 Toronto, Canada

Wanted 4-foot LATH Wire Collect

Charles H. Stewart,
691 Lothrop Avenue,
24-3 Detroit, Michigan

Antidote is Found for Tereidos' Activities

One of the most destructive pests that the logging operator and the sawmill man in B. C. have had to contend with is the teredo. No known remedy to combat its activities has been found until what is known as Piper's Anti-Teredo has been placed on the market. This concern, of which Mr. C. T. W. Piper is the president, with headquarters in Vancouver, B.C., has, it is believed, been successful in producing a commodity that absolutely defies the teredo. Tests of this paint have been carried out, tests of a rigid character, and in every instance the wood which had been treated with Piper's Anti-Teredo has come out of the water scathless, while timbers that had not been so treated have been transformed into something resembling a honeycomb.

These pieces of timber have been allowed to remain under teredo-infested waters for several months. In some cases only part of the wood was treated with the stuff and it is remarkable that on examination it was found that the little water worm ate its way right up close to the paint and then turned back. The paint soaks its way through the wood and prevents the teredo making havoc with it. This composition is by no means expensive; and it is claimed—and there appears to be every foundation for that claim—that large sums of money will be saved through the application of this paint, which has the property of being everlasting. In other words, one coating is sufficient to last an indefinite number of years.

So beneficial is this paint that

the Dominion Government has specified that it must be used on woodwork on all harbor works. Lumbering and logging concerns that have wharves on the waterfront will find this commodity to be invaluable in the treatment of the piling in future construction work of that character. The offices of the company, it should be mentioned, are in the Dominion Building, Vancouver, and here there are numerous examples of the activities of the teredo and the timbers that have been treated with Piper's Anti-Teredo composition.

The following limits are offered for sale. Cruiser's Reports and blueprints where available will be sent to Principals or their accredited Agents:—

British Columbia, Prince Rupert District:—

160 acres freehold within ¾ mile of Skeena City on the Grand Trunk Pacific Ry. Estimated stand 5,000,000 bd. ft. within a few miles of Prince Rupert.

British Columbia R. R. Belt:—

Estimated stand approximately 300 million bd. ft. Capacity of mill 60,000 bd. ft. per day. The plant is on the main line of the C. P. R. and logs can be driven into the millpond at a minimum cost.

Quebec, Bonaventure County:

A Crownland limit of 4 sq. miles, estimated at 20,000 cords of Spruce and Fir is offered for sale. This limit is on Metapedia waters with a driving distance into the Metapedia, just above the Metapedia boom, of about 25 miles. The limit is about 14 miles from a station on the Intercolonial Ry. and the settlement extends back to within 3 or 4 miles of the northern boundary. Logs can be landed on a drivable stream for \$10.00 per M. bd. ft. and can be driven into the Metapedia boom for about \$2.00 per M. There should be a minimum profit in operating this tract of \$40,000.

Ontario, McMahon Township:

36 sq. miles of Crownland, stand estimated at 50,000,000 bd. ft. with 140,000 cords additional. Extensive tracts of timberlands for sale in all parts of Canada and Newfoundland. List your properties with us for quick results.

Review of Current Trade Conditions

Ontario and the East

Business in the lumber line continues active and shipments are going forward across the border in much larger quantities than they were a year ago at this particular time. Each day seems to develop more inquiries in the lumber arena, and it is far easier to sell material than it is to get it. The country is being scoured for stocks and many producers are holding out not only for the highest prices but insisting that settlement should be made in cash before the goods are shipped. In the past there has not been such insistent demand for early settlement, but now many manufacturers want not only the highest figure but also instant payment for whatever lumber they have for sale.

The car situation is serious in some parts of the country but Toronto wholesalers maintain that so far they had little to complain of. More stock is now coming from the West than has been the case for some time, and long-delayed deliveries are being made. This is gratifying news to many wholesalers and retailers, as practically all B. C. business has been tied up for some weeks.

In the production line improved reports are received from logging companies, and men are more plentiful. With good operating weather, there should be no difficulty in getting out a larger quantity of timber than for some time past. Advices from various centres indicate that next season will be a particularly active one in the building world, and just how enough lumber is going to be secured to meet all wants between now and the time that the new stock will come on the market, is a problem. In the meantime prices are very stiff and in certain lines of hardwood stiff advances are going on all the time. One large company, which had a big stock of white pine lath, sold twenty carloads during the past few days at over double the price at mill which lath brought a few months ago delivered.

Building activity continues in all the principal cities and towns and the prospects for the coming year are very bright. In Toronto the value of the permits reached the huge sum of nearly twenty million dollars during 1919. The retail trade which is now busy taking stock have closed a very satisfactory year and are looking forward to 1920 with every expectation that the volume of turnover will be the largest for a long period.

There have been some more advances on B. C. fir, No. 3 clear and better being up ten dollars per M, while No. 1 and 2 have ascended six dollars and edge grain flooring and ceiling have advanced to the extent of several dollars during the past few days. Shingles are also very firm and are going skywards. A comprehensive review of lumbering conditions in the Pacific Coast province is presented in an able review in another column of the "Canada Lumberman."

Lumber prices are still ascending and this is particularly true in the case of hardwoods. All the thicker ends of birch, maple and elm are in great demand and are commanding unheard-of prices. Automobile concerns are aggressive after these woods to use in the bodies of cars. The 1920 output of many leading firms will be closed cars, which require a great deal more wood than the open automobiles. Since the winter began and the streams have frozen up some small quantities of birch and other woods are being brought out by sleigh to the railroad track for shipment, but no very great quantity will come on the market from these sources.

All lumbermen are quite confident that 1920 is going to be a good year in the lumber business, that the call for all kinds of woods will be greater than ever and that it will be difficult in many instances to supply the demand. Just what new means of supply may be available or how much logging operations will show in the way of an increased production over last year, remains to be seen. In the meantime a larger output and higher prices seem to be the order of the hour. While stocks are low, those which have any materials on hand are not particularly anxious to see it move except at such figures as they care to accept.

The market for B. C. shingles has also taken on a firmer tone for whatever supplies that are available. Some of the mills are willing to take business for future delivery; there is comparatively little in this line held by the mills. Quotations were at approximately \$6.90 before the storm of four weeks ago, but the scurry for stocks as a result of extensive damage to buildings caused prices to jump. Prices went up almost overnight, and are now at the highest level in the history of the industry. Instances are known where orders were taken at \$7.50, which were refused when submitted to the mills. Within ten days the price went from \$7.75 to \$8.25, with sales being

most on cars in transit. Some of the mills are willing to contract for future delivery on the above basis.

Different B. C. mills closed down over their year-end for repairs to machinery, and will recommence operations during the first half of next month. Stocks are not being increased materially, and where additions are being made, it is scattered over all classes of stock, and is not distinctly appreciable in any one line.

Great Britain

Trade has continued active and there has been more enquiry of a general nature both from trade sources and also from manufacturers.

The course of prices continues firmly upwards, and there is no reason to doubt that present quotations will be a thing of the past before long, and that new levels will be established. The cost prices of all classes of American hardwood lumber are bound to advance very considerably. All reports from the States show that prices there are advancing by leaps and bounds, and the shortage of stocks on all the producing centres coupled with the strong domestic demand is forcing values on the mills up rapidly as the manufacturing interests realize that they have simply got to pay to get the goods, and that production, which has been so seriously interfered with by the unfavorable weather, is not in anything like proportion to the consumption.

To these factors, so far as this market is concerned, there is the adverse course of exchange to be added on to cost prices, and though freights may be looked on as pretty well stabilized now, the course of exchange at present seems to be more inclined to go against than in our favor, and this loss has got to be figured on to buying costs. On the basis of current exchange the loss is well over 20 per cent. now. This has led to the new method of quoting prices for forward shipment in dollars in the majority of cases, and in other cases where the prices are made in sterling the rate of exchange on which these prices are quoted is specified.

There is no doubt that Britain is now reaping the benefit of the heavy glut of imports which came in during the summer and autumn months, and were it not for these stocks market levels there would be much higher than now.

Plain oak in first quality continues of the most active sellers, and prices are up practically 10 per cent. on rates ruling a month ago. The market still remains slow on lower grades.

Quartered oak is in demand, but stocks are very light and very little coming to the market. There is not likely to be much quartered oak to be secured for some time, as stocks on the mills in America are very low, and as long as plain sawn lumber is fetching high prices and selling so rapidly the millmen are hardly likely to put up much quartered stock.

Alfred Dobell & Co., of Liverpool, in a recent market letter, say: New Brunswick and Nova Scotia Spruce Deals. The consumption more than accounted for the import and stocks at Liverpool and Manchester have been reduced to about 2,500 stds. which, however, consists very largely of narrow widths, for which values are easier. Deals were in good demand; Douglas Fir. There was a heavy import amounting to 181,000 cubic feet, mostly on Government account; Scandinavian Deals and Boards. The consumption of deals was satisfactory, and stocks have been slightly reduced. Flooring boards were in good request at enhanced values; Pitch Pine. Due to further depreciation in exchange and stiffening in f. o. b. values, quotations for forward shipment appreciated. Consignment shipments arriving unsold were largely stored for Shippers' account. There was an improved enquiry; States Hardwoods. The demand during the past month has slightly improved, but business for forward shipment is difficult to arrange on account of high prices demanded by shippers, and the comparatively heavy stocks still on hand.

United States

Business has naturally slackened off somewhat during the Yuletide period and the minds of all are turned on the probable conditions of 1920. The outlook is favorably regarded and the coming twelve months should witness increased productivity and demand with respect to prices, and whether they will ascend or hold firm it is not easy to predict, but, to say the least, no decline is expected for many months at any rate.

There is nothing apparent within the industry that predicates a break in prices. It is believed, in fact, that nothing short of an industrial collapse could seriously affect present market situation.

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. Bole, Pres. F. H. Goff, Vice-Pres. E. C. Barre, Gen. Mgr. W. A. Saurwein, Ass't. Mgr.

Active demand, based on present and future building needs, is ranged against heavily depleted supplies; mills are loaded with orders and both yard and industrial buyers continue their activity. Prospects are for continued strength in the market, with values higher than are now ruling.

The hardwood situation continues most excellent from the productive standpoint, but from the standpoint of supply it is more acute than ever. The southern hardwood territory has suffered from about two months of almost continual rainfall, which has made the woods well nigh impassable and has seriously tied up logging operations, and reports show that only about 20 per cent. of a normal log crop is coming out of the woods at present. The mills consequently are very short of logs; practically all of them have had to curtail their production to an absolute minimum and many have been forced to close down entirely. As a result of this abnormal condition the log market, as one lumberman expresses it, has "gone entirely out of reason," with prices at high levels that would formerly have been beyond belief. But even at that the mills are willing to pay any costs to secure a big supply sufficient at least to keep them from closing down entirely. This high cost of logs, whether they are gotten out independently or are bought on the open market, is the first reason for the present high price of lumber, and is of course entirely beyond the control of the mills. The situation is very critical indeed, and there seems to be no relief in prospect until a month or two

of fair weather has dried up the woods into a workable condition and has stimulated log production; and then it will be some time before the lumber can be available in shipping dry condition.

The strong upward trend of the yellow pine market continues, with indications that the demand is steadily increasing. In some conservative centres, not previously reporting activity, buying has actively begun. Wholesalers report that country yards are showing a growing anxiety and are buying freely at the advanced prices. City yards that had held off in the early phases of the revived market are now buying.

Decrease of available mill stocks is indicated by the virtual withdrawal of a number of mills during the week and small offerings on such stock lists as have been issued. Many of the largest operators are reduced to a "job lots" basis and none shows a disposition to accept cutting for future delivery.

While the demand is strongest for uppers, particularly flooring and finish, the greatest volume of business is in dimension, fencing and boards. Items that have been dragging, 2 x 6 and 2 x 10 are instanced, are in much more active demand with prices now about in proportion to the rest of the list; 20-foot lengths are in particularly strong demand in all dimension sizes and are bringing premium prices.

Small timbers are in much stronger demand and the entire timber list has advanced.

Market Correspondence

SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD

Ottawa Business Quiet During the Holidays

A period of quietness, largely occasioned by the prevalence of the holiday spirit, together with the expression of hope that the incoming of the New Year would show greater and increased business featured the Ottawa lumber market during the last two weeks of December.

Business, on the whole, slowed up quite a bit. It was previously expected it would at this time of the year. On the other hand there was a fair amount of inquiries, principally from the United States, and prices all around maintained their firmness and remained unchanged.

The export demand to the United States showed little or no change, but a hopeful omen for the future was shown by the continuance of inquiries for American yards, requesting prices, and probable dates of deliveries for shipments, based on orders to be placed next year. Domestic and local business remained about the same as during the first part of the month. There was a scattered demand for certain stocks, principally for repairs.

Stocks of lumber in general continued low, and all the way from manufacturers, to retailer, there was no tendency or attempt at cutting prices. Lath and shingle remained scarce.

Conditions with the woodworking plants and factories indicated considerable promise for an increased volume of trade during the coming spring months. The majority of the woodworking factories and furniture plants reported that they have sufficient orders in sight for the next two months. Some of them, however, will follow out their usual practise, and close down for a period around the New Year to effect necessary factory repairs.

The situation regarding export shipments to Europe showed practically no change. The exchange rate between Europe, Canada, and the United States remained a very large factor in connection with the export trade. Shippers generally were not inclined to take unnecessary risks and ship deck cargoes of lumber during the winter months.

The car situation with the United States showed some improvement, due principally to the prevailing mild weather, and the lessening of the demand for space on account of decreased lumber shipments from Canada.

Ports Congested—Imported Wood Dearer

Writing to the "Canada Lumberman" L. M. Ellis, Advisory Forest Officer of the Board of Agriculture for Scotland, with headquarters at 29 St. Andrew Square, Edinburgh, make some interesting observations. In regard to the general outlook Mr. Ellis states that the situation respecting timber supplies in the United Kingdom is unchanged, that the ports are congested, railway transportation jammed and very little stuff moving internally. The feeling is general that a temporary shading off in values may result on account of

the glut, but no doubt the winter will be bridged over without any price shrinkages.

The "ready-made" house is taking well in Scotland. Bolton & Paul of Norwich Ave., Edinburgh, are in this business and report a lively interest. They are receiving numerous inquiries each day.

The Government housing scheme has proved a failure. The £150 free grant will not stimulate building as the building trades unions will demand it and the builder will not then be any further ahead, declares Mr. Ellis.

Local home-grown supplies of timber are heavy and prices slow. Mr. Ellis sends the following clipping from the "Glasgow Herald" of a recent date which, under the heading of "Imported Wood to be Dearer," says,—

The national importance of encouraging the use of home-grown timber, in view of a large increase in the price of the foreign product and its probable effect upon the finance of the housing scheme, was discussed at a meeting of the Council of the English Forestry Association, held at the Surveyors' Institution, Westminster. The President (Major G. L. Courthope, M.P.) was in the chair, and a representative assembly included the Earl of Selborne, the Earl of Chichester, Lord Clinton, Lord Bledisloe, and Major Wheler, M.P.

Swedish Operators Stand Out for Increase

Mr. Calder (chief of the Disposal Board of the Timber Supplies Department) informed the meeting that large foreign imports of timber had lately arrived in this country, but this was just the rush before the Baltic closed. There were large supplies at the Baltic ports which could not be got away. The Swedish importers were standing out for a considerable increase on the present price of timber, and thought they were justified in that demand in view of the requirements of Germany and other countries. There did not appear very much likelihood of cheaper timber in this country before next summer.

Mr. M. C. Duchesne (honorary secretary of the Forestry Association) said this announcement imparted additional interest to the British Timber Conference. The housing scheme was of such great importance that it must not be allowed to be prejudiced or retarded by the action of Swedish importers or any other importers. The Earl of Selborne had promised to preside at the Conference, and Lord Lovat (chairman of the Forestry Authority) hoped to be present, and if that was impossible he would endeavor to secure the attendance of a member of the Forestry Authority. The object of the Conference was to develop to the fullest extent the consumption of home-grown timber, and to specially emphasize the valuable properties of British oak, elm, beech, and other hardwoods, which might be profitably employed in the housing scheme. There were large supplies of certain classes of oak standing in this country to-day which could be used to the greatest advantage.

Mr. Calder said the Timber Supplies Department had sold a large amount of standing and cut timber which they purchased for

BRAND *Pure Wool Underwear*

O.V. (Ottawa Valley) brand has been worn for fifteen years by Canada's nation builders—on railroads, farms and the Empire's battlefields; in mines and in construction camps. Made for warmth and durability, in medium and heavy weights, in combinations and two piece suits. Guarantee with every garment.

Moderate prices.

Sold throughout the wholesale trade only.

war purposes, and on these sales, aggregating £1,000,000, they had made a profit. The manufacturers of aeroplanes had been much alarmed at the possibility of an exhaustion of the supplies of English ash. They said nothing could equal English ash for aeroplanes, and the Department reserved a large quantity of this wood for the needs of those manufacturers.

The Cheapness of British Oak

Mr. Duchesne said that at the present time oak was almost cheaper than soft woods, and it would be far more economical to use home-grown wood.

Mr. Calder agreed, and said the Housing Department had given an order to the Timber Supplies Department for oak for window frames, etc., in a thousand houses. The Board of Trade had circularised railway companies not to use anything but English oak for certain specified purposes. The Port of London Authority had purchased a large quantity of elm for covering the quays, and the city of Nottingham had recently given an order for wood for paving blocks. There would be a great demand for English beech in the furniture trade, and certain quantities would now be purchased for wood blocks or housing.

Mr. Duchesne remarked that he had seen splendid beech in Devonshire, and he tried to get it profitably conveyed to the furniture manufacturers at High Wycombe, but the heavy railway rates prevented this being done.

The President said he had been asked recently to supply a number of comparatively small orders of first-class oak for war memorials, which required seasoned timber. Had the Timber Supplies Department drying facilities of which those outside could avail themselves?

Mr. Calder—We have the room, and I could arrange for drying. The drying kilns of the Air Board and the Ministry of Munitions are to be obtained at practically scrap prices.

Increasing Use of Hardwoods in Distillation

For wood distillation, that is, to obtain wood alcohol, acetate of lime and charcoal, the northern hardwood forests are fortunately located, furnishing for this industry somewhat over one million cords of hardwood each year. Maple, birch and beech are considered most desirable although hickory and oak are of almost equal value, says the "Hardwood Record." Up to 1900 wood distillation was almost wholly centralized in the state of New York but it is now an important industry also in Pennsylvania, Michigan and Wisconsin. Several of the wood distillation companies in New York and Pennsylvania own tracts as large as 50,000 acres each and Nelson C. Brown, professor of forestry in the New York State College of Forestry at Syracuse, states in his recent book on "Forest Products" that these companies are practising one of the best forms of forestry because they utilize the products of the forest most completely, stimulate its maximum growth and so far as possible, eliminate forest fires. The vigor of the forest is maintained by renewal both by sprout and from seed and all the available wood product is utilized. He adds that it would be a highly desirable situation if all forest industries could be run on the same basis.

It is estimated that between ten and eleven million gallons of wood alcohol are produced in this country every year. Its greatest consumption is probably the paint and varnish industry in which about thirty-five to fifty per cent. is utilized. Wood alcohol is used very largely in aniline dye factories. Charcoal's great market is in the reduction of iron ores, a single blast furnace using between 10,000 and 12,000 bushels of charcoal a day.

Handling of Lumber Speeded by Unit System

Handling shipments of lumber by the unit system is rapidly developing on the Pacific coast and is resulting in speeding up the work immensely, says Scientific American. The lumber is handled in units by means of iron slings, being hoisted aboard by an electric crane. These binders are left on the loads after being placed on the boat; thus the same binder that is used to place the load on board is employed to lift the load off the boat. At the destination the lumber is unloaded as rapidly as it is loaded, at the rate of about 2,000,000 feet a day. One of the vessels operating between Coos Bay, Oregon, and San Francisco and carrying 1,450,000 feet of lumber, makes a round trip in about five days. This boat can be given a full load in twelve hours and on some trials this work has been done in ten hours. The unit system nearly eliminates the human element in the great work of loading and unloading.

A man's mind is like a pool of water. It must be fed by fresh streams from the outside, or it will become stagnant, and it must have an inlet too. The inlet is what he learns. The outlet is what he does.

Offices—McGill Building, MONTREAL, Quebec**EDGINGS****Ontario**

Arch. Graham has bought the sawmill of Charles Walker, Newburgh, Ont., and has put the same in operation.

The Russell Harris Lumber Company have moved their offices from the Ryrie Building to 34 Victoria Street, Toronto.

The Agawa Timber Co., Ltd., who conducted a sawmill and lumber business at Sault Ste. Marie, Ont., have discontinued business.

The timber limits owned by H. R. Brown at Port Sydney, Ont., have been purchased by a company of capitalists headed by C. Dolph, of Preston, Ont.

Mr. Tait, of Clarksburg, is erecting a sawmill about a mile and a half from Port Sydney, which he hopes to operate by hydro-electric power in the near future.

Alex. McDermott, an employee of the Marshay Lumber Co., was so badly injured by an explosion of dynamite while roadmaking near the company's camp at Laforest, north of Sudbury, that he died while being taken to the hospital.

John Cooper, one of Lakefield's best known residents, passed away recently at his home in Lakefield aged 72 years. For many years he was foreman of the Strickland Lumber Company's yards, and later conducted a livery business.

Mrs. Kennedy, relict of the late John C. Kennedy, who was prominent in lumber circles in Pembroke district for half a century, died recently. She was 76 years and moved to Sudbury some six years ago to live with her daughter, Mrs. Fraser.

C. J. Thornton, ex-M.P., who has had long experience in the lumber line and is an expert sawyer, has bought from James R. Fowler two lots in Orono, Ont., near the corner of Main and Concession streets, on which he will erect and operate a sawmill.

James McCreary, of Sudbury, who is cutting a considerable quantity of dry jack pine on his limits, is making good progress with the work. He states it is a very costly year to cut any low-grade timber, and expects to have some information in the near future in regard to the success of the undertaking.

A federal charter has been granted to the Harris Wood Products Co., of Toronto, with a capital stock of \$100,000, to carry on the business of lumbermen, sawmillers, planing mills, etc., and deal in timber and wood timber limits. Among the incorporators are W. B. Sturup and Thos. S. H. Giles, of Toronto.

Mrs. Sproule, a veteran missionary of Northern Ontario, has been addressing meetings in St. Marys, Parkhill and other towns in Western Ontario. She has been working in the lumber camps for the past twenty years. Last season her time was spent chiefly among the schools near lumber camps of the north.

John E. Charlton, of Lakefield, Ont., whose mill was recently destroyed by fire, intends rebuilding during the coming season. He has had two gangs of men working steadily in the woods since the 1st of September, and expects the cut in his district next year to be the largest that he has ever taken out during the past four years.

The Manufacturers Lumber Co., Ltd., of Stratford, Ont., have been particularly busy since the big wind-storm and have secured from the farmers in the surrounding districts considerable timber which was blown down by the gale. The company intend to operate three mills next season and expect that their production will be the largest in the history of the firm.

The Pembroke Lumber Company recently closed its sawing operations. The cut was considerably over 20,000,000 ft., and on the whole the results were the most successful that the company has had for a long time. The men were paid off in full and received a bonus of 25c a day for every day worked during the season, and some of the envelopes were quite bulky.

Mungo Stewart, one of the pioneer business men of Tilbury, Ont., passed away recently at the age of 82 years. His death was due to a fall downstairs. He conducted a sawmill in the township of Tilbury East for over twenty years, after which he removed to Tilbury, where he was engaged until 1916 in the retail hardware business; when he retired to private life.

A federal charter has been granted to the Lazier Paper Mills, with headquarters in Montreal and a capital stock of \$45,000. The company is empowered to carry on a lumber, timber, pulpwood and paper business and to manufacture, sell and deal in timber, logs, lumber and wood of all kinds. It is understood the company has taken over the Lazier Paper Mills in Belleville, and will improve and operate the same.

An extra provincial license has been granted to Arrowhead Mills, Inc., a corporation created under the laws of the State of New York, to purchase, sell and lease property, timber and timber lands, to erect and operate mills, and to manufacture, buy, sell and deal in paper, pulp and paper stock. D. Urquhart, of Toronto, is the attorney of the company, who are empowered to expend up to \$30,000 in operations in Ontario.

The foundation has been completed for an extension to the office building and factory of the R. Laidlaw Lumber Co. on Dundas St. West, Toronto. The upper floor of the factory will be extended to Dundas St. and will increase the size of the office below. The ground floor will be used for office purposes and the upper part for draughting, estimating and factory purposes. The additional room has been rendered necessary owing to a rapid increase in business.

A by-law will be voted upon by the ratepayers of McNab Township on January 5th for the purpose of fixing the assessment on the business of Gillies Bros., who have requested that the assessment of their land and personal property in the township be fixed at \$50,000, and the business assessment at \$30,000. The firm are re-erecting their sawmill at Braeside, which was destroyed by fire some months ago, and when completed the new plant will be one of the finest and most up-to-date of any in Ontario.

Eastern Canada

Boisse & Racicot, lumber dealers, were recently registered in Sherbrooke, P.Q.

The partnership existing between Letourneau & Frere, lumber dealers, D'Israeli, P.Q., has been dissolved.

J. A. Rousseau, St. Anne de la Perade, Que., is seeking a site for sawmill to cost \$100,000. Material will be purchased.

J. A. Rousseau intends erecting a sawmill at Cap de la Madeleine, Que. It is likely that the mill will be built on the east side of the St. Maurice River.

Prospects for a cut of at least 300,000,000 feet of lumber on crown lands in New Brunswick are bright. A cut of such magnitude would produce a revenue in the vicinity of \$1,000,000.

Arthur Robinson, of Waterloo, N.B., has erected a new sawmill in Foster, N.B., which will be operated by electric power. Mr. Robinson has a large number of men engaged in work in the woods.

The brick work is proceeding satisfactorily on the big pulp and paper mills of the St. Maurice Lumber Co. at Three Rivers, Que. The enterprise when completed will cost between \$6,000,000 and \$7,000,000.

The River Ouelle Pulp and Lumber Co., of St. Pacome, Que., have sent out an appropriate and artistic calendar showing a typical shantyman riding the logs down a turbulent stream. The setting and scene are very impressive.

Eugene Patenaude, lumber merchant and contractor, of Nominigue, Que., is making certain changes in his mill and is getting ready to saw twice as much as he has been doing up to the present. The mill will be in full operation early in June, and a very busy season is expected.

Fred. Jeffrey, formerly of Fredericton, and now of Cumberland Bay, Queens County, N.B., is carrying on a lumber operation of between 1,500,000 and 2,000,000 ft. at Wickham. He is also interested in another operation at Belyea's Cove, Washademoak, where about 1,000,000 ft. are being cut.

The Riordon Pulp & Paper Company, Montreal, have registered a trade mark for their pulp. It is a circle, enclosing a maple leaf, with the words Maple Leaf Bleached Sulphite in the centre. The name of the firm and words "Made in Canada" are printed around the inside of the circle.

The Dorchester Lumber Co. recently suffered a loss of \$100,000 at St. Malachie, Dorchester County, Que., when their grain elevator and freight shed went up in smoke. The Dorchester Company formerly dealt exclusively in lumber, but in recent years have conducted a wholesale and retail store.

The "Canada Lumberman" is in receipt of a very handsome calendar, the compliments of the Fassett Lumber Co., Limited, Fassett, P.Q. The picture, which is tastefully mounted on a grey background, depicts an Alleghany trout stream. It's an invitation that the followers of Isaac Walton will find hard to resist.

Auger and Son, lumber merchants, of Quebec city, have filed suit against a railway company for the loss of three carloads of lumber. Auger and Son claim that the lumber was shipped to them from Causapsal, Que., about a couple of hundred miles east of Quebec city, and that it was lost in transit, and never could be traced.

The three-masted schooner the "Barbara McDonald," which was launched in October from the shipyard of her owners, J. A. McDonald & Co., at Charlottetown, was totally wrecked off Cape Vine on the Newfoundland Coast recently. The vessel was valued at \$30,000 and her cargo at \$10,000, and was partially covered by insurance.

The River Valley Lumber Company have the foundation laid for the new mill at Oromocto, N.B., which will replace the one recently destroyed by fire. The new mill will be one of the most modern in the province and will be equipped with the latest machinery. The company expect to have it ready for operation in the spring.

J. N. Rafuse & Sons are about to commence the construction of a schooner in Foley's shipyard at Salmon River, N. S. The vessel will be built from one of the latest models of the knock-about type and will be about 155 feet overall, 24 beam and 11 deep. It is the builders' intention to have her ready for launching early in March.

A splint factory is being erected at Berthierville, Que., by the Log Supply Co., and the estimated outlay will be \$2,000,000. The general contractor is the Austin Construction Co., Ltd., of Montreal, who are putting up a boiler house, masher house, log haul and machine shop. The buildings are 533 ft. x 320 ft., steel and brick construction.

A federal charter has been granted the Franquelin Lumber & Pulpwood Co., Ltd., with headquarters in Quebec City, and a capital stock of \$550,000, consisting of 15,000 shares, of which 5,000 are preference shares par value \$100. The company is empowered to acquire, hold, lease and deal in wood, timber, timber lands and limits, and to manufacture and deal in products of the same. Among the incorporators of the company are Louis St. Laurent, Joseph A. Metayer, Chas. V. Devin and others.

There have recently been put through in Quebec Province a number of important deals in pulpwood limits. The Howard Smith Paper Mills of Montreal have bought the Turner limits at Lake Edward. These comprise an area of 289 square miles and the consideration is said to have been in the vicinity of \$300,000. Another recent sale was that of the Carrier limits on the Cascapedia River, comprising 170 square miles, to M. C. Small, Superintendent of the Laurentide Co., Grand Mere. The price is said to have been \$700 per mile.

A radical change in the hours of labor of their workmen at the pulp mill and also in the rates of pay in effect, was put into force recently by the management of the Bathurst Lumber Company, Bathurst, N.B. Instead of operating their plant by two shifts of eleven and thirteen hours each day, the modern system of three shifts of eight hours each has been adopted, while the rates of wages for the new periods have been made the same as was formerly paid for ten hours, plus an advance of 10 per cent., or the equivalent of eleven hours previous pay.

A recent despatch from St. John, N.B., says: Despite the inducements of high wages, proper housing and board, owners of timber areas and the A.N.D. Co., are finding it difficult to get men for the lumber woods this season. The A. N. D. Company are advertising for 800 workers and are offering all kinds of big things, as are also the other companies, but so far the applications have not reached half the number expected. After the Christmas holidays, however, it is expected that many hundreds will offer from the outports, though in any case the cut of logs for this season promises to fall far short of what it should be.

The Standard Hoist for Loading and Skidding Logs
Made with either one Drum, or two Drums, as shown, and in seven sizes, from the little 10 horse power machine to the massive 50 horse power size.

POWER LOADING

USE EITHER STEAM OR GASOLINE AS YOU PREFER

One Ontario Lumberman is using 7 machines same as shown in the illustration. With each of these he can load up to 2,000 logs per day. He uses the 20 H.P. and the 25 H.P. sizes. He uses these machines for only two months each year, but even at that he finds them a good paying investment.

Our booklet "Suggestions for the Lumberman" describes many methods of using these machines for both Loading and Skidding. If you have not got a copy, write us, and one will be sent you free of charge.

The Gasoline machines will do the same work exactly as the steam, and are much lighter in weight, therefore easier to move around. Their price is also much less. They are made in the same 7 sizes as the steam power machines, from 10 horse power up to 50 horse power. The 10 H.P. size will load up to 1,000 logs per day.

GOODHUE BELTING

For

Saw and Planing Mills

In a Goodhue Belt you get only the best leather with the stretch taken out of it. A Goodhue Belt will always run evenly and "clings" to the pulley transmitting 100% of your power

For the wet places in the mill we have a special waterproof leather belt—"Acme." Other Goodhue Belts are "Extra" and "Standard" recommended according to the conditions under which the belt has to run.

Goodhue Belts stretch less than any other belt by 15 to 25 per cent.

Thousands of sawyers will tell you of their experiences with other saws before they permanently selected Disston High-Grade Cross-Cut Saws.

They will tell you of hard work with others saws that "bind" and won't "take hold."

Usually, they also speak of having tried saws that wouldn't hold their set in "hard cutting."

Then, too, they sometimes say they lost much time with saws that had to be sharpened "every time you turn around."

Now these men insist on Disston Cross-Cut Saws—they know that to use an inferior saw is to waste time and energy.

HENRY DISSTON & SONS, INC., TORONTO, CANADA

Branch: Vancouver, B. C.

All Disston Cross-Cut Saws are made of a special grade of Disston Crucible Steel—an exclusive Disston product—made only in the Disston plant.

It is the strength and edge-holding qualities of this famous saw steel, combined with right design and workmanship, that has enabled Disston to maintain acknowledged leadership in saw making for nearly eighty years.

The Filing Room—The Great Southern Lumber Company

Ten Aloxite Saw Gumming Wheels Grind 192 Saws in Twenty-four Hours in one of the Biggest Mills in the Country—

DOWN in Bogalusa, La., is the big mill of The Great Southern Lumber Company. Every twenty-four hours they cut thousands and thousands of feet of lumber—night and day they are at it—there is no let up. So it is up to the filing gang and Aloxite Saw Gumming Wheels to keep the battery of saws on the job.

And they surely do!

On ten machines, Aloxite wheels, on two

shifts grind fourteen band saws forty-four feet long; one hundred and twenty-five eight-inch gang saws; thirty-six twenty-five inch edgers; six forty-nine inch slasher saws; ten thirty-inch trimmers and one seventy-two inch cut off saw.

And they say that every wheel cuts clean and fast—cuts cool—holds its shape—literally helping to make it possible for this great mill to keep up its enormous production.

SAVE LABOR IN THE CAMP

In every camp one or more men are required to peel potatoes. It has been proved that there is from 20 per cent. to 30 per cent. wastage in hand peeling.

The Cyclone Vegetable Peeler

will save you money and labour. It will peel and wash a bag of potatoes in from three to five minutes and will effect a saving of from 25 per cent. to 40 per cent. on material alone.

Reasons Why You Should Use

ATKINS^{STERLING}QUALITY SAWS

Reason No. 1—ATKINS STEEL

Reason No. 2—ATKINS WORKMANSHIP

Reason No. 3—THE TEMPER

Reason No. 4—THE NAME

Reason No. 5—THE GUARANTEE

Reason No. 6 -- The Result

THE result of Atkins Saws is not hard to find. It may be seen in the more progressive camps, mills and wherever the Atkins trade mark shines among contented workmen. It is realized in better work and longer service. A saving in time (which is indeed a saving of money), by the elimination of too frequent filings is only one of the many important results of relying upon Atkins Sterling Quality Steel.

A close investigation and comparison of the Steel, the workmanship, the temper, the name, and the guarantee of Atkins Saws as compared with any other make, should convince every discriminating user of saws in the Dominion, that Atkins is the one investment bringing most returns in the form of direct results. Always ask for Atkins.

Preventing Power Waste

If your power is metered, you know that you are entitled to pay for so many units; but have you ever made an effort to determine the amount of power actually used in turning out a unit of manufacture?

Slippage on pulleys and the wrong kind and size of belting are responsible for a power waste, which, if computed in dollars for the period of one year, would make you gasp with astonishment.

Have your engineers check up the cost of your power by any method, then try out

Dominion Friction Surface Belting

for an equal period and check it by the same method—you will be surprised at the difference in the cost of power used; also at the difference in belting efficiency.

Our belting experts are ready to show you, without cost, that Dominion Friction Surface Belting gives the greatest service, at the smaller cost. Ask our nearest Service Branch for proof.

SYRACUSE BARBITTS

QUESTION NO. 6

What causes a bearing to "Knock"?

Answer:

Soft spots in the bearing which have worn down, giving the shaft room to play. Soft spots in a bearing are due to incomplete amalgamation in the babbitt, or to a separation of the ingredients when the babbitt is melted for pouring.

Syracuse Babbitts are so alloyed that soft spots are impossible. They may cost a cent or two more per lb., but this is made up many times over by their dependability and durability.

United American Metals Corp'n

Syracuse Smelting Works, Subsidiary

Meserole Ave. & Diamond St.

Why the Bell Locomotive is so Well Suited to Lumber Haulage

The tractive effort of the Bell Locomotive is 50% greater than direct-connected type locomotive of equal weight. This power is obtained with cheap liquid fuel such as kerosene, fuel oil, distillate or crude oils. The economy effected makes the Bell Locomotive a most important factor in cutting expenses of logging operations. Strongly built for constant use, simple of construction, and compact. Operated by one man only. Does not emit hot ashes or sparks. All parts interchangeable and kept in stock for immediate delivery. Made in sizes from 2 to 25 tons in working order.

Do Your Planers and Matchers Balk at 300 Feet Per Minute?

Are you letting real dollars-and-cents profits slip through your fingers because of slow-feed, worn-out or small capacity machines with their high operating costs and small production of poor quality work. If so, you owe it to yourself to investigate the H. & B.

No. 115 Fast Feed Planer and Matcher

—the greatest development in fast feed machinery, producing 250 to 300 feet per minute of the finest grade flooring, dimension, shiplap and baseboards and, when equipped with a Profiler, working ceiling, partition, mouldings and all novelty drop sidings at the same rate of feed and in many cases raising the grade from 30 to 50 per cent.

No. 115 is built in two sizes to surface up to 9 and 15 inches wide respectively, each size to joint from $\frac{3}{8}$ -inch to 6 inches thick. It will produce more and better lumber per minute, per day or per thousand feet of rough stock handled than any machine of its class on the market.

Learn more about the No. 115 and its possibilities for lower costs and added profits in your mill—we'll send you all the facts on request. Write today.

Pyrene Fire Extinguishers

Are the Ideal Fire Protectors for your mill, for the following reasons:—

- 1st—Pyrene is death to all inflammable fires.
- 2nd—Pyrene does not freeze at fifty degrees below zero.
- 3rd—Pyrene does not deteriorate.
- 4th—Pyrene is easily operated and ever ready.
- 5th—Pyrene reduces your Fire Insurance rate 15 per cent when installed on your Automobile or Motor Truck.
- 6th—Pyrene has served with the boys at the front.
- 7th—Pyrene in one of our Holsters is ideal for your watchman in case he locates a fire in your building.

We also carry the $2\frac{1}{2}$ Gal. Soda Acid Extinguisher

Ask for our Catalogue which contains a full line of fire appliances, also for our book on how to protect your factory. This book contains valuable information.

FIRE BRICK

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

**"Elkco Special," "Elk Steel,"
"St. Marys," "Keystone" and "Rotex"**

Write for copy of our catalogue,
"Refractory Efficiency Engineering."

The Peter Gerlach Company

Cooperage Machinery and Saw Makers

Established 1854

CLEVELAND, OHIO, U.S.A.

To the Saw Mill Operator:

HAVE you considered the proposition of adding a veneer plant to your equipment? It would probably pay you to look into this branch of the lumber business and see what the possibilities are for you. We build a complete line of veneer machinery, from lathe to dryer. We will cheerfully give you estimates as to the cost of equipment.

The Coe Manufacturing Co.
Painesville, Ohio, U. S. A.

The oldest and largest manufacturers of veneer cutting and drying equipment in the world.

"Give me 'ASBESTOL' every time."

That is exactly what thousands of lumbermen say when asked what make or brand of work gloves they prefer.

Just what is responsible for this dyed-in-the-wool confidence? Just this—"ASBESTOL" Gloves and Mittens are made of best quality hides, the sizes are true, the seams are reinforced, and they WEAR!

EISENDRATH GLOVE CO.

"Hamilton" Steam Tension Band Mill

(Single or Double Cutting)

SPECIAL FEATURES OF THIS BAND MILL

- 1—Tension on saws maintained by steam—quickest and most sensitive form of tension yet devised.
- 2—Top wheel supported both above and below mandrel.
- 3—Extra large mandrel bearings top and bottom.
- 4—Top wheel has 12-inch range of adjustment.
- 5—Unbreakable upper saw guide raised and lowered by steam—first used on our machine.
- 6—Both top and bottom wheels instantly aligned by screw adjustment.
- 7—Operating mechanism is rapid and power driven.
- 8—Takes saws 12 inches to 14 inches wide.
- 9—Extra heavy, rigid, strong and accurately built throughout.
- 10—Built by expert workmen in a plant that has been manufacturing high grade saw-mill machinery for over sixty years.

GOOD YEAR

MADE IN CANADA

EXTRA POWER BELTING

You can find no safer guide in selecting your belting equipment than the experience of others.

In over one thousand of Canada's plants Good-year Extra Power Belting is being used with marked success. Scores of these have written us telling of their experience with Extra Power Belting.

Read this letter from The Dominion Steel Products Co., Limited, of Brantford, a concern noted for its progressive methods. It tells of a belting experience which must impress you.

Price was a minor factor with Dominion Steel Product, but on this alone they made a saving of \$4,000.

Length of service, general efficiency, continuous operation and power saving were the determining factors in their decision to use only Extra Power Belting in their plant.

It may be that your plant is much smaller; that your saving would only be \$400, but even this plus the greater efficiency of Extra Power Belting is too important for you to disregard.

You can easily prove to your own satisfaction that Extra Power would serve you as faithfully as it has the Dominion Steel Products Co.

Phone, wire or write our nearest branch, so that a man carefully trained in belting problems by Goodyear may call on you and present further evidence of the superiority of Extra Power Belting. No obligation other than fair investigation.

THE GOODYEAR TIRE & RUBBER CO. OF CANADA, LIMITED

Branches—Halifax, St. John, Quebec, Montreal, Ottawa, Toronto, Hamilton, London, Winnipeg, Regina, Saskatoon, Edmonton, Calgary, Vancouver. Service Stocks in smaller cities.

THE DOMINION STEEL PRODUCTS COMPANY, LTD.
ENGINEERS AND MANUFACTURERS
BRANTFORD, CANADA.
October 30th, 1919.

The Goodyear Tire & Rubber Co.
of Canada, Limited,
TORONTO, ONTARIO.

Gentlemen:

Our experience with your Extra Power belting has been so extremely satisfactory that we feel sure you will want to hear about it.

When we opened our steel plant in 1917, the question of belting was an important one. We had to have reliable belts. So we bought some of every kind of belt offered us. We tested them. Extra Power was so superior to the others that finally we specified it exclusively. Now, every belt in the entire plant with one exception is Extra Power.

So far we have purchased over 10,000 feet of your Extra Power belting. We figure that the next best belt would have cost us close to \$4000 more in the first place - and would not have given us such good service.

Most of the Extra Power belts in our plant have been in use for over two years. Little signs of wear on any of them. In fact practically all the original Extra Power belts are in use still, except one on such severe drives as we had on our 50-horsepower.

You can gather from this just what we think of Goodyear Extra Power Belting.

Yours very truly,

Chas. L. Thompson
Superintendent.

IT'S sturdy dependability and faithful service under adverse conditions makes *D. K. McLaren's Genuine Oak Tanned Leather Belting* the ideal belt for lumberman.

That narrow piece of solid leather, from the back of the hide, is all that goes into our belts. It is tanned by the *Genuine Oak Process*, and fully stretched before it enters the make-up of a belt.

The rigid care exercised in the selection of our leather ensures absolute reliability.

Specify D. K. McLaren's Genuine Oak Tanned Leather Belting, and you will minimize your belting troubles.

FOR TUGS AND BARGES

Made in Five Sizes

Made in five sizes to accommodate flexible steel hawsers from $\frac{5}{8}$ in. up to 2 in. diameter. This is the most up-to-date and modernly efficient machine on the market today. It saves its cost in three seasons. Many users testify as to its value. Now is the time to place your order for Spring Delivery. Send for fuller particulars.

VANCOUVER MACHINERY DEPOT, LTD., VANCOUVER, B. C.

Proctor
DRYERS

For Exacting Conditions

Your individual problems of veneer drying may be different or the conditions more exacting. Because it is seldom that two drying problems are the same our engineers make a special study of your particular conditions, considering the relation of the drying to preceding and following operations, quantity to be dried, number of men employed, heat available, cost of power, etc.

Proctor Veneer Dryers give a perfectly flat and pliable product without checks or splits

Oldest and Best

HOE

Chisel Tooth Saws

Choice of Lumbermen Everywhere

The even temper of these saws and the fine quality of steel from which they are made have proved Hoe saws reliable for nearly one hundred years.

More than one hundred thousand "Hoes" are to-day successfully sawing lumber in all parts of the globe. The Hoe Chisel Tooth Saw, invented 40 years ago, is still the best for cutting hardwood.

Special Flanged Shanks and Superior Bits Supplied

R. HOE & CO. 504-520 Grand Street New York City

America's Oldest Saw Manufacturers

Rubber Goods FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "P.M.S.," "Special Drive" and "Lion" are our leading brands for power transmission.

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

Hose for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

LUMBERMEN'S

EQUIPMENT

We make mill machinery of all kinds. Send for our Catalogue and detailed information of any machinery you require.

Saw Carriages

We make all sizes of Saw Carriages for every type of mill.

The Carriage illustrated is our No. 40 three block outfit. Knees recede 40 inches from the saw line. May be furnished in any number of head blocks or axles, also with steam set works attached to either our No. 3 or No. 4 set. This is one of the most substantial carriages ever designed, and is well known for its efficiency throughout the lumber industry of Canada.

And Here is Why :

Built in 7, 8, 9 and 10 ft. sizes, there's a Waterous Bandmill for every kind of work.

The spring-cushioned, all knife edged tension device is the most sensitive in use.

Upper and lower guides swing about the exact centre of the saw blade.

The Upper Guide is raised and lowered by steam, an easy, accurate and swift adjustment unequalled by any other.

Wheel raising device and tilting device are roller bearing.

Operating mechanism is entirely enclosed in columns. Sawdust and slivers cannot reach it.

Massive design of the bed and columns precludes vibration during cutting. This mill is absolutely steady doing the heaviest work.

Every part of the mill is designed to make millwrighting easy. Adjustments and inspections can be made without difficulty.

Waterous Bandmills are designed and built in a plant that has specialized in the manufacture of Canadian sawmill machinery for more than 75 years. It counts.

Doing Things Well

Right from when we were first engaged in the lumber industry, it has been a business maxim of ours that doing things well creates confidence and good will.

Many years of experience in lumber service to the trade has proved it—judging from results.

For some time the name Hocken was always associated with quality Hemlock, but since we discovered that patch of splendid Pine down near the La-Cloche Hills, the name Hocken has signified Pine of the highest quality, cut well, piled well, and delivered well.

This is the service we offer you. Tell us your requirements.

The Lumber Grader

In lumber manufacturing plants it is the Grader who has the last word in determining quality. Every board and timber must pass before his eyes and the grade mark he puts upon them is based solely upon the established grading rules that govern him. Skill, intelligence and pains-taking care he must have but, most of all, he must have experience—for only practice makes perfect. In its thirty years of lumber making The Long-Bell Lumber Company has developed graders of good judgment and to them can be traced directly the chief reason for the uniform quality of Long-Bell lumber. That both dealer and consumer may be positively assured of obtaining lumber that has passed the inspection of these trained men it is branded with this trade marked name:

Long-Bell

Three Steps in Roofing

SHINGLES

—The ideal material for roofing—Provides a perfect three-ply covering—Gives a solid roof surface capable of withstanding shock without injury—A natural non-conductor, assuring warmth in winter and coolness in summer—Near and artistic in appearance—The best known type of roof in Canada, has met all-comers for years and still leads the procession.

RED CEDAR SHINGLES

—made from that wood which—above all others
—is best suited for exposure to weather.
—saturated with natural oils which give it decay resisting powers even under extreme conditions.
—extremely light but of such a natural texture as to defy alike all climatic and weather conditions.

BRITISH COLUMBIA RED CEDAR SHINGLES

—The highest standard of durability, protection and economy known in the roofing world.
—Made of British Columbia red cedar—from the Pacific Coast where the trees attain a perfection as nowhere else in the world—forest giants—hundreds of years old.
—Manufactured and packed according to grading rules which guarantee the highest standard on the market—Vertical grain—Strictly clear—Free from sap.
—Sold under a Trade Mark which assures the highest quality—enables you to offer your customer the best—most durable—most economical roofing in the world.

Send to us for "Shingle Helps"—Dealer's literature for your customers—just issued—which tells just what they want to know about shingles—a booklet that will help your business.

VANCOUVER, B.C.

Many Eastern Canadian Firms have never used either WESTERN SOFT PINE or WESTERN YELLOW LARCH.

The extremely heavy demands for lumber in 1920 may force them to use these woods. We hope so, and also that some of our product may be available, for we know we will then have made many life long friends.

Our Idea of Service

EXCESSIVE rains have retarded hardwood production. We are frank to admit that our stocks are broken from supplying the constantly growing demand of our customers. However, we are producing a fair volume of Ash, Elm, Hickory, Maple, Oak and Poplar with the aim of giving even better service, if possible. And, as always, our customers must be satisfied. If it happens that we can't help you in the above lines we may be able to refer you to someone who can. Ask us.

Uncertainties —in most things *Certainty in One*

"SERVICE" — Something promised but seldom given—the most common word in the lumber language and the most uncommon in the "getting"—that's uncertainty.

It has been our earnest endeavour during 1919 to render "SERVICE" in all our dealings. We will enter the New Year with the same ambition—that's a certainty.

1880 Forty Years Ago 1920

"Nothing shall be wanting on our part to make this journal a full and complete record of the lumber business and all that relates to the trade in Canada."

IN setting forth the reasons for the coming into existence of the Canada Lumberman and Woodworker on October 15th, 1880, the publishers made the above declaration. It constituted the purpose for the establishment of the paper which was to reflect the thought and development of the Canadian lumber industry—destined to occupy the enviable position of the National Lumber Paper of Canada.

That its existence has been justified is evidenced by the interest evinced by those connected with the lumber industry in each issue.

The Canada Lumberman—the paper with the green cover—is to be found prominently displayed in the offices of lumbermen from the Atlantic to the Pacific.

It is read thoroughly and each succeeding issue is eagerly awaited by our subscribers.

It is the medium through which to keep in close touch with the activity of the lumber industry and its numerous branches.

It is considered an authority on matters appertaining to the Canadian lumber industry.

Times Have Changed

When the Canada Lumberman was first published, advertising was in its infancy in Canada. Manufacturers did not fully recognize the value of placing the merits of their product before the particular field they wished to reach. If any advertiser had attempted to run a full page advertise-

ment he might have been considered as on the road to bankruptcy.

But times have changed—the advertiser of 1880 who used card space is the full page advertiser of today. These manufacturers realize that advertising is an integral factor in their selling plan—that it can be entered upon with far greater assurance of success than most business procedures.

You can reach the owners and operators of logging camps and saw mills, wholesale and retail lumber dealers, etc., in all parts of Canada—the big buying power of the lumber industry—through the columns of the Canada Lumberman and Woodworker.

Advertising is Business Insurance

A large manufacturer who, during the war, devoted his entire plant to war-work, kept his advertising running continuously, although he could not fill a single order. When asked why he did it, he said that he was insuring a market for his product when he returned to his regular lines. He has since reverted to his pre-war products and his plant is running to full capacity with more business in sight than he can handle.

Advertising was business insurance for him.

Simonds

Crescent Ground Cross-cut Saws

There is no other cross-cut saw on the market that gives so much satisfaction as a Simonds Crescent Ground. It is a fact, established by tryouts in the heavy timber belt, that a Simonds will cut 10 per cent. more timber in the same time,

than other brands of saws. Not only is it fast cutting, but it is also an easy running saw, honestly made and ground scientifically. A Simonds Crescent Ground Cross-Cut Saw does not bind in the kerf, and is fully guaranteed.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice, at Buffalo, N. Y., under the Act of Congress of March 3rd, 1879.

No. 2

The Coming Convention in Quebec City

In many respects the twelfth annual gathering of the Canadian Lumbermen's Association, which will be held on February 4 and 5, in Quebec city, will be the most important and far reaching in results of any ever conducted in the history of this institution. There are the questions of trade expansion, a national survey of the timber resources of the Dominion, the development of the statistical department, the production, distribution and urgent call for all kinds of wood products for the coming year, transportation, export, etc.

The growth of the association has been rapid during the past few years and the institution has become more national in character, scope and outlook. The St. John, N.B., convention, in 1919, was unanimously voted one of the most satisfactory and successful assemblies of members of the industry ever held. The proceedings were marked by business from the opening to the close of the two days' sessions. There was no set or cut-and-dried programme; ample time was allowed for discussion of all important matters and live issues were afforded every consideration. Practical problems which presented themselves during 1918-1919 were taken up, while the reports of committees were effective and to the point. Everything went off with a swing and amid enthusiasm. The welcome accorded the visitors was of the most cordial nature.

The ancient and picturesque city of Quebec, with its hospitable people and many sights of historic interest, bids fair to attract visitors on February 4 and 5, from far and near, whose sympathies and future are bound up in this great Canadian enterprise. A most interesting two-days' session has been arranged and everything betokens a large and representative attendance. The social features are not being overlooked and all who can possibly make a trip to the

Ancient Capital next month will be well repaid. The local committee of arrangements is an energetic one and the first meeting of the C. L. A. that has ever been held in the sister province of Quebec, outside of Montreal, should prove a winner in the widest interpretation of the term.

Quick Returns But Shortsighted Move

All theories in economy have been set at naught by the recent trend of industrial events. Many a home owner has thought that there was no time like the present to dispose of his property. He has been approached perhaps by a glib-tongued real estate representative and told how the demand for houses was never as keen as it is at present, and if he—the owner—has any idea of parting with his dwelling, now is the time to sell for such and such a figure can be obtained. The home-owner listens to the siren song in amazement and sees at a glance that he can make two, three or four thousand dollars on a deal. He imagines that he can pick up another domicile which will suit him equally as well as the one that he is in and the ready money looks alluring.

Without giving the problem sufficient thought or viewing the matter from any other angle than that of an immediate sale, the owner hears the fascinating tale of a big price and satisfactory profit, and sets about to find another habitation. His woes and perplexities commence. It is then and only then that he discovers for the first time in his career he is decidedly up against it. He learns to his sorrow that the profit he has made he must pay to some one else to secure a roof over his head and then finds that he has to add on several hundred dollars besides. Houses which are being built to-day are, in many instances, constructed of much inferior material than those which were put up before the war, and several sellers of their homes have not been able to secure a residence at all that would in any way answer their purpose. Dwellings to rent are equally as scarce and rents are the highest ever known. In many cases they have not only been trebled, but quadrupled.

Owners who sell without having another home in view, or who are thinking of building in the spring, are learning to their sorrow that they are "paying through the nose," according to the present trend of costs. Abraham Lincoln once remarked that it was a very foolish proceeding to swap horses when crossing a stream. The same pertinent observation might be applied to the home owner who disposes of his property at this juncture without some anchor to windward. The stream was never as wide and of as uncertain depth as it is at this particular period.

Business Methods That Win Patrons

It is easy enough to expand any business when the demand for the product is greater than the supply and everything marketable has many buyers. When the call is insistent a slipshod service may be tolerated. Much depends on how urgently the purchaser needs the goods. He must have them, perhaps at any price, but days of prosperity and unprecedented development are not always with us. Some firms in the hey-day of present activity seem to overlook this, and are inclined to treat certain inquiries too cavalierly. Just now in the lumber line selling is probably not as important a factor as supplies. The market is largely a seller's one, but, in the natural course of events, there may sooner or later come a time when conditions will be reversed and then the boot will be on the other foot.

A rising market like a monopoly often tends to independence, intolerance and indifference. The days of adversity or stagnation are forgotten and the knock at the business door is now and then answered by a rough and cold salutation "Come in." No sooner is access gained than the feeling on the part of the party who has the temerity to enter, is akin to that of getting out.

There has been brought to the attention of the "Canada Lumberman" during the past few days one or two cases which call for more than passing comment. Representatives of other countries are now looking for supplies and, in one instance, a caller who had travelled thousands of miles and bore a letter of introduction which he handed to an official in the office, was greeted with the reply: "Oh! I have

no time to bother with matters of this kind." The visitor was turned down summarily. In another case a New Zealand business man carrying endorsement from various public bodies—in fact one from the Premier himself—was accosted on his visit to a certain Ottawa house by an egotistical and self-centred individual. After presenting his credentials, the caller was hailed with this salutation: "Oh! we are pestered to death with fellows like you just now. We are all sold up and can't entertain any more propositions." The representative turned on his heel and departed.

How different was his reception at another office, where he was warmly and cordially welcomed by the head of the concern, who carefully and thoroughly explained the domestic situation and, in the course of an hour's pleasant conversation, received and gave many business pointers and suggestions, with the view of building up an export trade in his particular line during the coming months. Much has been written regarding the quality and character of service in business building, but courtesy and kindness are and ever will be two of the most important elements. The heads of certain manufacturing and wholesale institutions frequently do not learn of the actions and ill advised words of those who are in the front office or hold down a seat at the inquiry wicket. A few dollars saved here may prove costly in the long run. Those persons, who meet callers, should possess a cheerful disposition, some tact, intelligence, and diplomacy, and, above all, common sense and ordinary, every-day politeness. The arrogant, flippant and consequential clerk, or curt official should be promptly released, and would be, in many instances, if his attitude and bearing were known.

A well-known Canadian correspondent at Ottawa, in writing of his experiences on parliament hill a few years ago, stated that in his long career he had never found it difficult to secure an audience with a cabinet minister when he had any real business with him, but added that he never approached a mere door-keeper, a sessional clerk, or a common messenger without a feeling akin to grovelling in the dust.

Group Insurance for the Lumberjack

One of the vital problems that lumbermen and logging operators have had to face for years has been the retention of the services of the lumberjack, and more particularly the alien, for any length of time. There is a class of men, mostly foreign born, who claim to be woodsmen, and float from one camp to another, sometimes staying only a day or two, and occasionally only over-night. The lumber companies have, perhaps, gone to the trouble of paying an employment agency so much per head for securing these fellows, and also advanced their railway fares, and then, without waiting to see what develops, this brand of sojourning worker passes on to the next camp, and so on to the next, with the speed of a Cook's tourist making a globe encircling trip in sixty days.

The "jumping" of these foreigners has long been a thorn in the flesh of the progress and continuity of woods operations. The exodus results in disruption, delay and over-lapping, so that costs, already high, are piled still higher. The meals are satisfactory; the wages are the largest ever paid; the sleeping quarters are comfortable, and warm, and the work not too arduous, yet the "professional lumberjack" moves on and on, and the question how to harness him and keep him in camp for thirty days or more has long been a vital one.

Various solutions of this problem have been suggested, such as Government regulation, an Associated Employers' Bureau, prosecution for fraud and misrepresentation and other plans, none of which will adequately meet the case. This week the "Canada Lumberman" received a humorous communication from an eastern manufacturer who, discussing the proposition already outlined, says: "I have hit upon the real genuine thing. I have made a great discovery. The idea is entirely new, but by no means patented, and, therefore, I am going to let my fellow-operators in upon a good thing. I notice that everybody is trying the group insurance plan, whereby employees who remain in the service of a firm are to receive various sums from \$500 up to several thousand dollars at the time of their death, providing they are still in the employ of the concern, who will bear

all the expense of the premiums, etc. This group insurance idea, in order to insure permanency and efficiency of service, has caught on like a prairie grass fire, and now many firms, big and little, are adopting the insurance system in toto. Of course, if an employee does not stick, his insurance lapses.

"Now, what is the matter with the enterprising lumbermen agreeing to place a group insurance on the come-day, go-day, happy-go-lucky devil-may-care lumberjack, and doing so with a great flourish of trumpets and an outburst of generosity. The logging operator could announce the placing of group insurance on all his crews in the camps provided they served continuously for such a length of time. Just think of what a spectacular move this would be, and how little it would cost in the end, to be heralded as one of the greatest benefactors of the age. This is one side of the problem.

"The other is that, while nominally a display of liberality would be witnessed, it is doubtful if at the end of three months there would be a single bushman in the camp. Why I know of one concern this season that is employing between three hundred and four hundred men in its camps, and already the names of seven thousand men have appeared on the pay-roll. How is that for migration?

"Oh yes! bring along that group insurance plan if it will only cause the average 'woods tourist' to stay long enough in camp to get a cup of tea and bid the cook 'Good morning.'"

Work—Co-operation—Prosperity

Put one hundred men on an island where fish is a staple article of sustenance. Twenty-five of the men catch fish. Twenty-five others clean the fish. Twenty-five cook the fish. Twenty-five hunt the fruit and vegetables.

So long as everybody works there is plenty. All hands are happy.

Ten of the allotted fish catchers stop.

Ten more dry and hide part of the fish they catch.

Five continue to catch fish, but work only part of the day at it.

Fewer fish go into the kitchen.

But the same number of men insist upon having the same amount of fish.

The fifty men who formerly cleaned and cooked the fish have less to do owing to the under supply of fish. But they continue to demand food.

Gradually greater burdens are laid upon the fruit and vegetable hunters. These insist upon a larger share of fish in return for their larger efforts in gathering fruit and vegetables. It is denied them and soon twenty of the twenty-five quit.

But the entire one hundred men continue to insist upon their right to eat.

The daily food supply gradually shrinks. The man with two fish demands three bananas in exchange for one of them. The man with two bananas refuses to part with one for fewer than three fish.

Finally the ten men remaining at work quit in disgust. Everybody continues to eat. The hidden fish are brought to light and consumed. Comes a day when there is no food of any kind. Everybody blames everybody else.

What would seem to be the situation?

Exactly! We thought you would guess it.

For we repeat that you can't eat, buy, sell, steal, give away, hoard, wear, use, play with or gamble with what isn't.
—Chicago Herald.

"One third of the growing spruce of this country is on the soil of Maine," said Senator Fernald of Maine in a recent address before the paint and varnish men of the country. "We have 22,750,000,000 feet of spruce growing here and we can cut 750,000,000 feet every year from now until the end of time and have just as much growing and we can with proper consideration furnish the cities of the United States with all the paper they need."

Difficult to Size Up the Lumber Situation

S. G. Denman, Eastern Canadian Representative of British Timber Buyer, Returns from Trip Overseas—Great Shortage in Transportation Seen

S. G. Denman, Montreal

Mr. Stanley G. Denman, who was appointed Eastern Canadian representative to the British Government timber buyer on May 1st, 1919, has just returned to Canada. Mr. Denman, returned via New York on the steamer Mauritania, and the passage was excessively rough, so much so that he really thought the ship had touched bottom, at one time. During his visit in London the British Government Timber Buyer's Office was abolished and the department will henceforth be known as the Imported Timber Disposal Section of His Majesty's Board of Trade, with headquarters in Salisbury House, London, and a branch in Montreal, of which Mr. Denman is the Canadian representative.

In an interview with our Montreal representative as to conditions generally on the other side, Mr. Denman stated that it was difficult for him to form an accurate opinion, as conditions were continually changing and improving. The congestion of shipping in the different ports of the United Kingdom is exceedingly serious. According to information he received about three or four weeks ago, there were one hundred and fifty-three ocean-going steamers at London awaiting discharge. In his opinion shipping conditions would not resume anything like normal for about six months. He found, in Manchester, that conditions were of a similar nature, but comparing the port with London Manchester would be cleaned up, if the present rate of improvement continued, in about three months.

The great trouble all over England appeared to be the enormous shortage of transportation, not alone for lumber but all classes of merchandise, both ship bottoms and freight cars being very much less than the demand. Continuing, Mr. Denman stated he had been given to understand that there is a shortage in the neighborhood of 300,000 railway wagons in the United Kingdom. This condition was brought about by the great strain under which the British Empire labored during the war and their apparent absolute neglect to build more railway cars or to repair those that were crippled. In other words, all other work was sacrificed to completing efficiently and rapidly the most important job—the war.

Mr. Denman stated that the great labor unrest so noticeable in the United States, principally on account of Bolshevik propaganda, is conspicuous by its absence in the United Kingdom. He considers that over there labor and capital are gradually arriving at an understanding of each other and that things are gradually shaping towards normal once again. It will, however, take considerable time ere conditions generally have settled down to their pre-war status.

Speaking of British Government lumber purchases in Canada, Mr. Denman said he was delighted to be able to say that prospects of tonnage for the clearing of goods over-lying in Canada on account of the Imperial Government were getting brighter every day. As far as Montreal is concerned the Government has cleared up that portion already; there are still a few thousand standards of deals to be shipped from Quebec, and a considerable quantity from the St. Lawrence and from New Brunswick and Nova Scotia.

If transport difficulties could be overcome in the United Kingdom these overlying goods would be shipped over very quickly. He said that his department had made very little headway in shipments since September, yet prospects of liner shipments from the ports of St. John and Halifax this winter were very encouraging, and if the Ministry of Shipping were able to carry out their tentative plans it would, he was quite sure, help considerably in solving the problem and disposal of the congestion of lumber now in Eastern Canadian ports.

Mr. Denman visited Paris and a portion of the devastated area while upon this European trip. He stated that one will never realize the tremendous amount of damage inflicted by the Hun until one has

visited the country and viewed the ruins for oneself. He went over the road from Paris to Rheims and passed through Mieux, Crecy, Chateau Thierry, Dormant and Rheims. In all the villages he visited only the smashed walls of houses and other buildings were left. Along the road known as Chemin des Dames are little crosses on the edge of the roadway marking the last resting place of many of our brave British and Allied troops, including our splendid Canadian boys who made the supreme sacrifice.

Mr. Denman said that while in Paris he was appointed Canadian representative of the timber department of the Republic of France. France has something like forty million feet of lumber overlying in Canada, and as Mr. Denman has naturally considerable knowledge of prevailing conditions and also experience in handling their stocks the Timber Department of France secured his services (without payment) to look after and protect their interests in Canada. Regarding the prospects of the movement of the French goods the French officials fully realize the importance of moving their stocks, and are making great efforts to secure tonnage.

Lumbering Industry on the Cinema

The Canadian Pacific Railway have just released another fine series of cinematograph pictures illustrative of lumbering and the other leading industries of the West. Twice last week these were privately shown to large gatherings of commercial men and others at the Central Hall, Westminster, Eng., and the wide range and comprehensiveness of the display will be best gained from the synopsis, which was as follows:—From Forest to Press and Bindery; Banff; Fighting the Car Shortage; From Fleece to Finished Product; Asbestos Industry in Quebec; Fredericton—New Brunswick—Lumbering; Making Beet Sugar; and Life on the Prairie. The films were produced by Pathescope, Toronto; Dobbs, Seattle; S.N.A., Chicago.

Sir George McLaren Brown, the European manager of the Canadian Pacific Railway, who presided, before the exhibition began, explained why the Canadian Pacific exhibit these films, and said in part: It is with a second and higher purpose than merely to increase your knowledge of Canada. Every British-born man or woman, whether of the United Kingdom or of an Overseas part of the Empire, must realize that to-day, more perhaps than at any time of our history, it is our first, our paramount duty to do all that can be done to so cement and bind together the nations of our great Empire that its disruption will be impossible. In the past, we have depended almost entirely upon sentiment to hold us together, and that we did not depend in vain was proved when the great war came. We showed the world then a real League of Nations within the British Empire. A League wherein the citizens of each and every part rose up as one man, at the roll of the drum, to stand together for righteousness, shoulder to shoulder, heart to heart, in a unity that was the marvel of the world.

Will Need All Canada's Lumber Production

Speaking of the probable demand of forest products in the Old Country for the coming year, a representative Liverpool firm, writing to the "Canada Lumberman," says:—

From all accounts there will be an unusually large production in Canada this coming winter, but that production, large as it may be, would all be needed, particularly having regard to the fact that Russia, as an exporting country, is, for the time being at least, practically off the map.

There are, however, some serious drawbacks, which will give importers very serious pause. Among the first are the enhanced cost for which the operators in Canada are looking and the uncertainty as to freights, and greater than all, the fact of the large Government holdings of spruce in this country to say nothing of their large unlifted balance in Canada. Their stocks in this country at their commandeered rate of freight and their relatively low f.o.b. cost compared with to-day's value, enable the Government to undersell by a large margin any new import and there is always the fear that the Government might, by the pressure of public opinion or otherwise, be forced to instruct their Importing Department to realize at once without reserve.

The effect of this would be a certain decline in values but even that would be preferable to having the sword all the time hanging over the head of the trade.

New B.C. Commissioner for the East

Wm. Robertson Will Have Larger Quarters For Displaying Forest Products of Pacific Province

Wm. Robertson, Victoria, B.C.

Wm. Robertson of Victoria, who recently succeeded Major James Breckin, as British Columbia Lumber Commissioner in the East, with headquarters at Toronto, has been successful in securing bigger and more convenient quarters. Starting next month, the offices and display rooms of the B. C. Lumber Commissioner will be on the ground floor at 1 Adelaide St. East, where larger space and show-window facilities are available. Mr. Robertson has several other plans in view of an educational and propaganda character, so far as making more widely known the merit, worth and adaptability of B. C. forest products are concerned.

The new Commissioner is a native of Fifeshire, Scotland, and came to Canada in 1885, at the time of the second Riel rebellion in the Canadian Northwest. He had some relatives in Western Canada and it was with the intention of joining in the fight that Mr. Robertson landed in the Dominion. The unpleasantness, however, had passed over before he reached this land of promise and achievement. He, however, journeyed to the then comparatively unknown West and for the first few years followed a number of occupations, and among them farming. He finally decided that the lumber business was not a bad line to get into and took a position in the office of Cameron & Kennedy of Norman, Ont. He was later with the Ontario & Western Lumber Co. and next with the Rat Portage Lumber Co. at Kenora, with whom he remained nineteen years, in the capacities of sales manager, secretary and finally manager of the company's interests in British Columbia. At one time the Rat Portage Co. operated six mills in and around Kenora, but the timber gradually became cut-off and their activities in that section finally ceased. Mills in the meantime were established at Winnipeg and in British Columbia.

After leaving the company in 1914 Mr. Robertson was for a time in the timber business on his own account and when the war broke out he recruited and enlisted in British Columbia contingent of the 238th Battalion, whose headquarters were at Ottawa. After spending some months in England he was transferred to the 14th Company, Canadian Forestry Corps. During service in France, he slipped and seriously injured his hip, which resulted in his being confined to the hospital for several weeks and finally receiving his discharge. On returning to Victoria, Sergt. Robertson entered upon trade extension work in the Forest branch Department of Lands, and last fall came to Toronto, where he spent some weeks in connection with the splendid display of forest products made by the British Columbia Government at the Canadian National Exhibition. On the recent resignation of Major Breckin, he again returned to Toronto and is now taking up the work with interest and enthusiasm.

During his long residence in Kenora, Mr. Robertson was a member of the Town Council for a number of years and also a member of and chairman of the Board of Education.

Mr. Wade Booms the Wooden House

Writing to the Canadian press from London, Eng., Henry Somerville says:—British Columbia may have the credit for solving the housing problem here when our own Government has only bungled in the most fatuous fashion. The first great scheme embodied in the Housing Act of this year, heralded as the greatest of all the great items of the era of reconstruction, has utterly failed. In desperation the Government has produced a new plan, the leading feature of which is the offer of a subsidy of £150 to any private builder who puts up a house of an approved pattern.

The root of the difficulty is the scarcity of building materials and the high cost of building. The possibilities of wooden houses were pointed out by a few people here who were acquainted with wooden dwellings in other countries. Especially active in this connection has been Mr. F. C. Wade, Agent-General for British Columbia. The British public, with characteristic insularity, was sceptical.

It envisaged a wooden house as something like an army hut. The British public may be excused for not knowing better, but there is no excuse for the official authorities, who are supposed to be experts in housing, showing the same ignorance and prejudice. The Prime Minister and the Minister of Health have talked of wooden houses as consisting of four walls and nothing else "with not even a staircase."

The persistent and trenchant propaganda of Mr. F. C. Wade has now roused the interest of the British public. He argues that wooden houses, mill-cut in sections, can be obtained from British Columbia. If official obstruction to these houses is withdrawn the only difficulty will be the shortage of shipping and this can be overcome. The wooden houses will be much cheaper than brick, but cheapness is not the most important point. The most important point is that if we wait for brick houses we shall wait for years before we get any houses at all.

The Durability of Green Timber

There is practically no difference in the relative durability of green timber and seasoned timber when untreated and exposed to the weather and in contact with the ground, has been established by recent experiments conducted by the Forest Products Laboratory of Madison, Wis., in connection with the manufacture of poles, posts or ties. In the case of ties laid by the Laboratory in co-operation with the Northern Pacific Railway, the average life of seasoned ties was only one-tenth of a year longer than that of the green ties and measurements on poles made by the Laboratory in co-operation with the American Telephone and Telegraph Company, show that the rate of decay in green poles is a trifle less than in seasoned poles. The fact that green and seasoned timber have the same durability when used in exposed places is due to the fact that both soon reach the same moisture content and this is the principal factor in determining the rate of decay of a stick of timber.

Wood for interior construction, however, should be thoroughly seasoned, otherwise it is likely not only to shrink to a serious extent but to decay before it seasons.

Believe Pine Will Show Big Advance

Chappell Bros. & Co., of Sydney, N.S., who are well known in the woodworking and building line, state there is not a vacant house in Sydney, and that many new dwellings must be built to accommodate the employees that will come to that city through several new industries which are now nearing completion. Continuing, the firm say,—"We do not anticipate any reduction in manufacturing costs, and slight increases will follow. Local lumber, which is not of a high grade, will likely be lower, because of the fact that many are going to operate only in a small way and will produce an inferior grade in quality and manufacture. Our opinion is that N. S. and N. B. lumber generally will be higher and that pine will show a big advance. Labor will, in our opinion, remain much the same as at present, with some special advances to good men.

The manufacturers of lumber can better their conditions by realizing the value of every piece of lumber and caring for it as they do for the dollar in the pocket, stick it properly from the saw, roof all piles, season it properly and have it in proper shipping condition as soon as possible after it is cut. Proper care of lumber from the saw will enable the consumer to use grades lower than would have to be used if good attention was not given. A little extra work in piling and properly caring for his merchandise will be profitable, not only to the manufacturer, but to the dealer and consumer as well.

Work For All Who Can Swing An Axe

There is still plenty of work available for able bodied men, according to officials of the Saskatchewan bureau of labor, and no one need starve who is strong enough to swing an axe. There are vacancies in the lumber camps on the books of the bureau at the present time for between 400 and 500 men.

The bureau has received applications for a considerable number of men to work in the camps at Keewatin and Ignace and there is a big demand for men in the woods north of Prince Albert.

Expert axemen are making good wages. They are receiving 18 cents a tie for cutting ties and at this price can make between \$8 and \$9 a day. Inexperienced men are being paid \$65 a month and board for cutting down trees and trimming them. As cheap railway rates are in effect, men can be sent long distances to camps at little cost to themselves. Officials state that a considerable number of returned soldiers are working this winter in the lumber camps.

Record Year for Shipbuilding in Nova Scotia

In Spite of High Priced Materials the Industry Proved Profitable—Many Wooden Craft Sold at Fancy Figures—Big Lumber Shipments Made

By E. Woodworth, Passboro, N. S.

The scarcity of shipping, which the revival of wooden shipbuilding has not yet been able to overcome, causes remarkable activity in all the shipyards along this shore. One result of this is that more vessels were registered at Parrsboro, N. S. in 1919 than were ever registered in one year before. The average tonnage was also larger than in the largest previous registry and the cost of building was greater than ever before, so, in every respect this has been a record year in Parrsboro shipbuilding.

The new vessels registered numbered twenty-six. Two old vessels that had been rebuilt were re-registered. Their second registration added nothing to the number of the Parrsboro fleet and made but little change in the tonnage. Three of the new vessels are very small, measuring collectively less than one hundred tons net. The others range from nearly nine hundred tons to less than three hundred, and aggregate tonnage of the new fleet is 12,450 tons gross, or 10,704 net tons. If the three small ones before mentioned were eliminated the remaining twenty-three would average a little more than 460 net tons each. Six of them are four masters, and the others are all tern schooners with the exception of one steamer and the three small ones. They are handsome, well built vessels, fitted with all the latest labor saving appliances, and have proved to be profitable investments. They have been built from carefully selected models and give promise of being large carriers and fast sailers, while some of them have already established a record for speed in transatlantic voyages.

Parrsboro has not been alone in this enterprise, for the western coast of Nova Scotia, especially Digby County, has turned off a fine fleet of a similar class of vessels, while the south shore, particularly Lunenburg County, has built an unusual number of small vessels, chiefly fishing craft, of an average of about one hundred tons each. In all other parts of the province shipbuilding has been active and it is probable that more vessels were launched this year than were ever turned off in one year before, but when the number and their tonnage are both considered it is believed that Parrsboro makes a better showing than any other part of registry.

Much Money Made Out of Industry.

Notwithstanding the acme of high prices shipbuilding the past year has been a profitable business. Many of the vessels were sold at fancy figures before they left the stocks, and the builders who retained possession of their craft have found no difficulty in securing charters at satisfactory rates. Some of them have taken two cargoes of deals to the United Kingdom and then gone south, some have been carrying gypsum to the United States at rates such as were never heard of before; others have gone up the Mediterranean; still others are cruising among the Antilles, and in short they have gone anywhere where ships go and when there is an opportunity to make good money. Under such conditions it seems reasonable to suppose that shipbuilding will continue to be pressed vigorously, but at present there are no indications that such will be the case. On this shore at present are about half a dozen vessels in varying stages of construction. These, of course, will be completed with as little delay as possible, but when they are finished it seems probable that many if not all of our shipyards will be idle for a time.

Shipbuilding has unquestionably been a profitable business during the last few years, and builders and owners have made big returns out of the industry. It may seem strange, therefore, that the business is likely to be abandoned, at least for the present. The reason is that it costs too much to build ships. There never was a time since the first keel was laid that it took so much money to build a vessel of a given size or class as it does at present. Everything that enters into the construction of a ship from keel to truck, from timber to rigging and canvas costs from two to four times its former price, while the cost of labor, which has gone far beyond all bounds, does not seem to have yet reached its limit. It is true that vessels have been built at a handsome profit and have made good money for their owners when prices were approximately as high as they are now, but there has already been a change in conditions and greater changes are liable to occur at any time. If shipbuilders could be guaranteed a continuance of the freights that were obtained a year or two ago they would gladly continue building, but no such assurance can be had.

The expense of building is as great as ever and perhaps a little greater; there certainly is no sign of any reduction in wages. The running expenses of shipping show no evidence of decrease. Sea-

men's wages are as high as they were during the last year of the war, and in some special cases higher. All the men employed in building or sailing ships are strongly opposed to any reduction in wages. Shipwrights, shipsmiths, riggers, seamen, stevedores etc. are ready at any time to claim an advance of wages; but are singularly reluctant to accept any smaller pay than they have been receiving. On the other hand there has been a decided drop in freights since the war, and although the scarcity of bottoms still continues, there is reason to believe that there will be a further decline before long, for the ultimate consumer is getting tired of paying war prices. It is no wonder then, that shipbuilders are inclined to be cautious and wait for further developments, for if a big slump in freights should occur it would take a long time to pay for a vessel at the present cost of construction.

The lumber business was so completely demoralized by the war that it is no longer possible to compare the results of one year's operations with those of another year on account of entirely different conditions. Owing to the embargo in 1918 not a single deal was shipped to the United Kingdom that year from this part where in former times it had frequently exceeded forty million feet. In the same year the construction of military camps in the United States caused such a demand for lumber that the exports from here were only limited by the means of transportation. Large quantities were forwarded by rail, all our available coasting schooners were employed and old American vessels, some of which had been long out of commission, were fitted up and sent here for cargoes.

This year with the embargo removed about twelve million feet of deals and scantling were shipped to Great Britain and the quantity would have been larger if more carriers could have been procured. Among the left overs here are about five million feet of deals and scantling purchased by the British Government and an equal amount owned by the French Government, but for neither of which transportation has yet been sent. In the United States this year the prices were good for our lumber, but vessels were scarce and the demand less urgent, so there was a big falling off in the quantity exported. In piling and lath, however, this year's export was far ahead of last year, and, taken altogether the output this year was fairly good considering the smallness of the cut last winter.

With regards to this season's or this winter's cut there is as usual a variety of opinions. In a paragraph that appeared in the newspapers recently a large lumber firm in St. John is reported as expressing the opinion that "in view of the stocks on hand and the state of the markets, lumber operators would be wise to content themselves with a moderate cut of logs this winter;" "roughly speaking" this authority estimates the amount of manufactured lumber now held in New Brunswick at 250,000,000 to 300,000,000 superficial feet, chiefly held on British account. "He also thought there would be from 100,000,000 to 150,000,000 feet more in Nova Scotia."

I know nothing about the correctness of these figures, but I find that "estimates of the officials of the Department of Lands and Mines place the lumber cut of New Brunswick this year at about 300,000,000 feet." Assuming both estimates to be fairly correct it is evident that the lumber shipments from New Brunswick this year have not been very large. With regard to Nova Scotia I asked a large lumber dealer who has travelled extensively in the province, and he told me he thought the one hundred and fifty million estimate was about correct. Another man, not a lumber man, but one who assumes to know all there is to know, told me he didn't believe there was more than fifty million feet in the whole Province. But let who will be right, the operators in this section seem to be taking no stock in the St. John man's advice, for they have put all the men they could get into the woods, and if conditions prove favorable we may count on next season's cut being the largest we have had for many years.

The proposal that the Government should let contracts for wooden ships in Victoria is, it is understood, meeting with considerable opposition. The Government has not yet announced its policy in the matter, but there is doubt expressed whether it will be possible to give orders for wooden ships in view of prevailing conditions. The view is taken by those opposed to wooden ships that, however much they may have been in demand during the submarine campaign, they cannot compete commercially with the steel ship. Requests that the Government should let contracts in Victoria for wooden ships were laid before the Government a few days ago by a Victoria delegation. The delegation urged that the orders be placed to meet unemployment.

Busy Booming Order of the Hoo-Hoo

H. R. Isherwood Enters Upon New Position — Membership in Canada Will be Increased This Year

H. R. Isherwood, Chicago, Ill.

H. R. Isherwood, the retail service representative of the National Lumber Manufacturers Association, Chicago, is now the secretary-treasurer of the Order of the Hoo-Hoo, recently succeeding E. D. Tennant. Many Canadians, previous to the war, belonged to the order, and it is now the intention to reconstruct the membership in the Dominion. Speaking of the worth and work of this organization a leading member says that it has been greatly misunderstood and declares that the Hoo-Hoo is the foundation of commercial co-operation within the lumber industry and creates a mutual feeling of respect and confidence.

The writer adds: Never before have thinking men so fully realized that there must be unity of action, and also respect and confidence established for and in one another amongst all classes of men.

Experience has shown that one of the surest ways to secure it is to bring men engaged in the same line of business together on a basis where they can forget dollars and cents, and learn to know one another as men. Hoo-Hoo is not a commercial organization, but it can build up commercial organizations within the lumber industry, by bringing lumbermen and their allied friends together on a basis where they become acquainted with the real man and learn how to make friends. It is an old maxim that you can always do more with a friend than with a stranger. When you create a fraternal feeling amongst lumbermen, and get them to realize the human kindly side of one another, you remove two-thirds of the difficulties encountered in getting these same men to co-operate in a commercial sense. Hoo-Hoo, therefore, is the very foundation of commercial co-operation within the lumber industry. It is the first step, makes the introduction, creates a mutual feeling of respect and confidence, thus enabling other organizations to establish their work on a proper basis.

In addition to this, the need for an organization amongst lumbermen that can extend a helping hand, when occasion demands it, has been fully demonstrated. During its career of twenty-eight years, Hoo-Hoo has paid out over \$95,000 through its Imminent Distress and Death Benefit Funds, out of dues and individual subscriptions, so small as not to aggregate as much as the average man often spends on an evening's entertainment. Many a lumberman, who was in distress and had reached a point where he was ready to give up, has been quietly lifted up and carried over the wall of despair by his Hoo-Hoo brethren. Hoo-Hoo files contain scores of letters from widows and orphans of deceased members expressing sincere thanks for help extended to them. Our experience has shown that there are hundreds of travelling salesmen and younger executives in the lumber industry, who, through no fault of their own, are often called away before they have been able to secure adequate protection for their families. Others and older men through physical defects cannot secure insurance. Even to those who have it, death often comes at a time when ready cash is low, and as it takes several weeks to collect the insurance policy, the Hoo-Hoo death benefit, while small, owing to its being paid at once, supplies ready cash to tide over a trying period. The fact that the lumber industry supports an organization which does these things, creates a feeling of closer regard and affection for the work which a man connected with it does, and is invaluable in creating a morale necessary to secure effective and enthusiastic work.

I ask those old Canadian members who in the past simply looked upon Hoo-Hoo as creating an occasional evening's fun, to carefully consider the foregoing facts. Conditions in Western Canada are very similar to those south of the border. When you consider the roster of Hoo-Hoo membership to-day contains 95 per cent. of the leading lumbermen of the United States, it proves that it is doing something worth while or their names would not be there.

Big Log Cut Down in the East

The Bathurst Lumber Co. are busy developing their water ply of men in the camps at the present time is a good deal more satisfactory than it has been for a considerable period. Most of the

lumber companies in the East are getting a fair cut of logs and the prospects are that the Maritime Provinces during the season of 1920 will produce more lumber than has been the case for the past two or three years. Nearly all the companies are taking out a bigger cut than usual, and weather conditions so far have been favorable.

The Bathurst Lumber Company are busy developing their water power on the Nepisiquit River, and satisfactory progress is being made. When this plant is completed it is possible the company will enlarge its pulp production. The prices of sulphite and kraft pulp just now are very firm, with an advancing tendency, but as the cost of wood is increasing very materially all the while, the company can see nothing but higher quotations for both lumber and pulp.

Big Log Production in Haliburton District

The John Carew Lumber Co. of Lindsay, Ont., are operating three camps this season and also have several jobbers taking out wood for them to increase their cut for next season. While labor is plentiful at the present time, it is not as efficient as it might be. The highest wages paid the best bushmen in Lindsay and Haliburton district is \$65.00 per month and board. To secure competent and efficient men is, however, not so easy.

The Carew Lumber Co. state that things are looking good in the lumber business as prices are high just now, but it must be considered when the cost of taking out the stuff is experienced there is not any more money in lumbering than what there was some years ago before quotations aviated as high as they are at present.

Why Christmas Trees are So Popular

Canadian whiskey dealers utilized the Christmas spirit, and more specifically the Christmas tree, to smuggle vast quantities of whiskey over the border into the United States during the holiday season, according to Internal Revenue agents in Newark, N.J.

This, they said, was the chief reason for the flooding of the tree market, which resulted in many dealers giving their stocks away.

Federal agents asserted that in the firry branches had been concealed many a quart of "red liquor," and that after these "decorations" had been removed, added supplies of trees had been offered to dealers already overstocked in the hope of reaping again the rich revenue of 1918.

Fewer Accidents—Spent More Money

The Workmen's Compensation Board spent \$4,057,696.63 in compensation and medical aid during 1919, as compared with \$3,883,994.84 during 1918, though the total number of accidents reported during the past year was only 44,260 as against 47,848 in 1918. The increased cost resulted from higher benefits under amendments to the Act, and increase of wages.

There were less accidents during the first nine months of 1919, and more during the last three months than during corresponding periods in 1918. The number of fatal accidents was 429, while in 1918 it was 440.

Initiating System of County Reforestation

Three petitions for private bills to be presented at the forthcoming session of the Ontario legislature have been received. The most important is from the council of the united counties of Durham and Northumberland asking for a bill to initiate a system of reforestation. A representative deputation from these counties recently waited upon Premier Drury and Hon. Beniah Bowman, minister of lands and forests, urging that steps toward reforestation be taken, not only in their own districts, but throughout the province. Their views were sympathetically received, and they were informed that if the localities would secure the land the government would be inclined to aid in the practical work of reforestation. The bill now asked for will give Durham and Northumberland counties power to obtain land as the first important step towards the larger scheme.

Nice Profit for Shingle Manufacturers

It is reported that shingle manufacturers and other Canadian producers who sell to United States buyers are reaping considerable profits from the high rate of exchange. In connection with this it is stated on the street that one western shingle manufacturer cleared \$6,000 above the billed value of goods shipped during November. Others have also made big profits out of the extraordinary condition of exchange.

The shingle mill of the Van Guelder Company, located on the international boundary at Peardonville, was recently destroyed by fire.

What the Motor Truck Can Do for the Retailer

Every Local Lumber Dealer Should Consider Problem from the Angle of Speed, Service, Economy, Efficiency and Convenience

Building operations that were suspended or postponed during the war are now being resumed. By early spring and for a period of years thereafter there should be a greater volume of business than ever before in the history of the country. The shortage of housing is giving much concern throughout the country. Indications are that prices of building materials and the rate of wages for labor will not decrease very much while the housing demand exists. For these reasons the hesitancy of home, factory and office builders to resume operations is giving way to a feeling that those who are first to start work will make good profits, says A. A. Van Kleeck, of Vancouver.

When the rush comes, lumber and other building material merchants who are in the best position to make quick deliveries and handle a large volume of order will naturally secure the largest and best trade. It behooves them, therefore, to make preparations to take care of this coming situation.

Lumber haulage presents a difficult problem. Teams have a very limited radius of delivery ability, ten or twelve miles being about the length of haul with load that can be made day in and day out, with return trip. Also, teams are slow, moving with load only three or four miles an hour.

Speeding up Work of Delivery

Many lumber merchants have adopted motor trucks to speed up the work and have accomplished this result. In many cases, however, they have found that motor trucking is more expensive, due to the idle time of the truck while loading and unloading. Various expedients have been adopted to avoid this standing time. It is a common practice to fit rollers to the truck bed so that the load can be dumped as a unit instead of being taken off piece by piece by hand. Again, a few lumber companies have used yard wagons for making up the loads and provided means for rolling the made-up loads from these yard wagons to the motor truck.

In more recent years there has been a return to the time-honored and efficient system in use with teams, by which several wagons were left in the yards to be loaded while the teams were hauling loads for delivery. But, instead of teams and wagons, tractor trucks and trailers or semi-trailers are employed. This combines the advantages of the old system with the speed and greater delivery radius of the motor truck. The trailers or semi-trailers are disposed about the yard and loading proceeds while the tractor is on the road. Thus the tractor is kept moving a maximum number of hours of the day, which is necessary to insure economy of haulage.

Assuming that a motor truck costs from \$15 to \$25 a day to operate according to size, including drivers' wages, fuel, oil and tires and all overhead, such as interest, repairs, supervision, etc., the cost of hauling one ton fifty miles per day with a one-ton truck would be 30 cents per ton-mile and of hauling five tons twenty-five miles with a five-ton truck 20 cents per ton-mile. But if the trucks spend half their working time waiting to be loaded and unloaded, it is evident that these costs will be doubled.

Giving Attention to Particular Needs

Each lumber dealer should give careful thought to his own particular haulage requirements before deciding on just the equipment he needs. A tractor and a number of semi-trailers will be best for some service, while a truck that can carry a load itself and draw a loaded four-wheeled trailer will serve others better. Long, heavy timbers, for example, call for a two-wheeled trailer with a long reach. With this outfit the front end of the load is supported on the rear end of the truck or tractor and the rear end of the load on the trailer. Short lumber can be carried most advantageously either on a semi-trailer or on a motor truck and four-wheeled trailer.

Decision between these two types depends on the particular custom of the dealer. With a truck and four-wheeled trailer two loads can be hauled at once and the trailer left at one point to be unloaded while the truck proceeds to a farther point to discharge its load. The truck, however, must wait to have its own loads made up. There is no such waiting with the tractor and semi-trailer, but the tractor cannot carry a separate load. It is possible, however, to

attach a four-wheeled trailer behind the semi-trailer, provided the tractor has sufficient power to haul the double load.

This question of power must be determined in connection with the condition of the highway and the grades to be ascended. If the roads are well paved and fairly level, a moderate sized tractor should be able to haul a semi-trailer and four-wheeled trailer, and almost any good motor truck should haul a capacity load itself and draw a four-wheeled trailer with a load of equal size. If, on the other hand, the roads are poor and the grades heavy, all of the power of the truck may be required to haul its own load or a semi-trailer with similar load.

The lumber dealer may be able to analyze all these conditions for himself but it is highly desirable to call in consultation transportation experts. The larger and more reputable truck manufacturers and trailer manufacturers employ experts for this particular work, and it is to their interest to recommend the equipment that will give the most satisfactory service and most economical operation, because a satisfied customer means other sales. Truck manufacturers generally realize the special nature of the lumber business and the peculiar adaptability to it of trailers and semi-trailers. Some of them build special tractors for the sole purpose of hauling those auxiliary vehicles

Knows Lumber Game from Every Angle

L. Van Meter of the Dennis-Canadian Co., manufacturers of hard and soft wood lumber at Whitney, Ont., is vice-president of that progressive organization, and has always taken a deep interest in the welfare and progress of the lumber industry in Canada either in Association work or otherwise.

In his younger days Mr. Van Meter served a full apprenticeship in the logging camps in Michigan and then spent some ten years in the newspaper business. The love for the open and the smell of the pine appealed to him too strongly for the routine of journalistic enterprise, and back he went into the lumber line and worked at various parts of the trade. As he recently remarked in a humorous vein, he believed that one of his duties was to doctor up the inspection in a wholesaler's office so as to make 10 per cent. good No. 1 common look like F.A.S. to the customer. Mr. Van Meter was also on the road a great deal as buyer and inspector, and finally as mill superintendent and manager. Eighteen years ago he went with Dennis Bros. of Grand Rapids, Mich., and managed the mills of the A. L. Dennis Salt & Lumber Co. at Dighton, Mich., for eight years. Upon the organization of the Dennis-Canadian Co. and the purchase of limits and the mill at Whitney seven years ago, Mr. Van Meter was put in charge and has since conducted the business with energy and aggressiveness.

The company are operating four camps this winter and employing about three hundred men. They will have a cut of about 10,000,000 ft. or twice their average output since 1915. They report wages about the same as last year, but supplies slightly higher. Labor conditions, however, have considerably improved, and the men in their district are staying in the camps well and appear willing to do a reasonable amount of work. The company are of the opinion that the increased production per man should more than offset the augmented costs in other directions. The Dennis-Canadian Company are taking out a mixed cut of spruce, hemlock, pine and hardwoods and are by means of a logging railway hauling their logs some ten miles.

L. Van Meter, Ottawa, Ont.

Sees Big Year Ahead in the Lumber Business

Leading Western Exponent of the Industry Believes the Cities Will Witness Greatest Activity Ever Known in Structural Operations

Herman H. Hettler, of Chicago, Ill., who is president of the big lumber company which bears his name, the northern office of which is located at Midland, Ont., takes a sanguine outlook of the building situation during the coming season, so far as Chicago, at any rate, is concerned. In a recent interview he made several terse and thoughtful observations which not only apply to Chicago, but other large centres. Mr. Hettler's remarks follow and will be perused with profit:

Chicago still continues to maintain its position as the world's greatest lumber distributing market. The last year represents probably the most varied state, as applies to conditions, in the history of the business. After the signing of the armistice, there was a hesitancy in practically every line of trade, and particularly so as applies to the lumber business. During the war building was held to a minimum, and consisted only of essential construction. Though the ending of the war lifted the Government ban upon building, there was considerable uncertainty and but a sluggish demand. January and February found the local market conditions dull, with lumbermen anxiously and watchfully waiting for improvement. March brought considerable improvement, and the inquiries for stocks sent to manufacturing points from Chicago and various other markets began to forecast the situation, that people were anxious to go ahead with reconstruction.

Building Trade Strike Halts Construction

The return of our soldier boys, added to the requirements of those who, were here, soon made plain that there was a great shortage of homes and apartments in this, as well as practically every other community in the country. It may be assumed that the war conditions also added to the wish and will of the people to own their homes, and propaganda of this kind was taken up by the Government, States, and cities, etc., with the endeavor to interest people in building. The month of May witnessed a keen demand for lumber, and this has been steadily increasing ever since. During the war, the Government's requirements for lumber were so essential that they exercised control over the distribution of the product and the prices. These conditions on the part of the Government were discontinued, and prices began to advance. Chicago was beginning, under the most auspicious conditions probably that have ever been known in this district, building construction work as applied to homes, apartments, hotels, office buildings, manufacturing plants, etc., in a very large way.

The building strike resulted in practically a complete tie up of all this construction work during a period of time when weather and other conditions were the most favorable. While to a limited extent this proved a benefit to surrounding cities, to which points some of the men went to work, it caused almost irreparable damage and injury to the city of Chicago in general, the loss falling upon all, and particularly, in our opinion, on the employees, union and other workmen. There can be no doubt but that on account of the strike the construction work on a great many buildings which would have been started, has been postponed until some future date, and in some cases indefinitely, owing to manufacturing plants deciding against locating here, on account of labor conditions.

It may be stated, however, that at the present time building construction is going along to such an extent that practically all those engaged in that line of industry, employers and employees, have all the work they can do. The manufacturer of lumber suffers from the same conditions as those which are confronting every other industry, as applied to shortage of labor which exists in the woods and the sawmills, and the general high cost of wages, supplies, etc. There is at the present time great difficulty in obtaining new stocks, but fortunately Chicago has an accumulation and for considerable time to come will probably be able to supply the demand.

Lumber Prices Will Not Hamper Building

Lumber prices have advanced in line with other commodities, and for the reasons stated, but based upon investigation, it does not appear that lumber has advanced in a greater degree, or in as great a degree proportionately, as many other articles. In prewar times, lumber sold much cheaper than other commodities, in fact the prices were abnormally low, and below the actual worth when we figure timber as an asset, and the cost of production, manufacture, distribution, etc. All lumbermen, in our opinion, who have the interest of their own business at heart, will share with the public in the wish for a more stabilized market and that conditions may soon be brought

about whereby the supply may be in sufficient quantity to cover the demand.

Prospects for a big building year in 1920 are exceptionally good and it is only reasonable to expect that some settlement will be arrived at by the administration whereby the railroads may endeavor to cover their necessities as to the replenishment of cars and construction work in general. The indications are for a firm and possibly a still stronger market as to prices. It is difficult to locate any reason which would prompt an opinion that there would be any material decline as applied to lumber or any other commodity entering into ordinary construction work. When the public in general accepts this idea and dismisses the thought that before long it may be able to build as cheaply as in prewar days, building will undoubtedly continue.

It is far easier for a man to have built a home for himself and his family, when he is earning more money than he ever did before, and that is true of the wage earner of to-day. When a worker received low wages he seldom thought of anything else but to pay the monthly rent, but now with his individual prosperity he considers a home a necessity, and this thought should be emphasized and every effort made toward lending aid and encouragement, as the class of good citizens will be increased to just as great an extent as their desires may be gratified. A great many cities have formed Housing Associations to aid and assist in this idea, and to supply the demand. Chicago still has a vast field to cover in this line, but is particularly fortunate in having a Housing Association, organized and directed by B. J. Rosenthal, who is a pioneer as to the thought in this line of construction, using as a basis the philanthropic idea, to build homes, not for profit but for people who could not secure them through ordinary ways and methods, such homes to be sold only to those who are poorly housed.

The Corrosion of Wire Rope

Of more than ordinary interest to all users of wire ropes, and this applies particularly to the many users connected with sawmills and timber yards, is a circular recently issued to managers of mines on the Rand, S.A. In this it is pointed out that experience has shown that wire ropes of compound construction subjected to corrosive influences are likely to deceive engineers as to the strength remaining in them. Where reduction of diameter, or circumference, of the rope has taken place not accounted for by the evidence of wear, the part of the rope under examination should first be fully loaded, and then relieved of the load. Any noticeable difference in circumferences under these circumstances, and the slackening of the outside wires when the load is off, will indicate that internal corrosion has taken place. The extent of corrosion inside the strand can only be estimated by the slackness of the outside wires. The corrosion between the strands can be further examined by untwisting the rope or displaying the strands sufficiently with a marline spike.

Engineers are apt to imagine that reduction in the size of a rope may be due to some collapse of the hemp core. In a test at the Mines Department mechanical laboratory of a 1.28 in. diameter rope, the hemp core was entirely removed for about 5 ft. of the length. The specimen was gradually loaded up to 30 tons, but beyond a slight increase of the lay from 10 1/2 in. to 11 in., subsiding after test to 10 3/4 in., there was practically no alteration in the shape or size of the rope.

In some recent tests of corroded ropes, the following results were obtained:—

Original Diameter in Inches		Original Breaking Load Lb.	Diameter at Test In.	Breaking Load at Test Lb.
Rope	Wires			
1.5	0.099	222,208	1.41	191,960
1.5	0.099	222,208	1.40	166,660
1.5	0.099	222,208	1.30	137,260
1.5	0.099	222,208	1.23	66,880
1.5	0.102	220,000	1.22	97,260
1.25	0.115	148,700	1.23	137,660
1.25	0.115	148,700	1.00	78,920

In all the above-mentioned cases the outside wires were less than half-worn, but the internal corrosion was excessive. The wires were brittle also.

A happy party of winter tourists enjoying open air sports in front of the Citadel at Quebec, in which city the Canadian Lumbermen's Association will hold their twelfth annual gathering on February 4th and 5th.

Port of Quebec Large Enough to Admit the Navies of the World

By Charles Smith, Secy-Treas. Harbour Commissioners of Quebec

The City of Quebec, Latitude 46.48' North, Longitude 71.13' West, is situated on the St. Lawrence River at the mouth of the River St. Charles, at the head of navigation for vessels of the largest draught. Its population is 110,000.

The Port of Quebec possesses exceptional facilities, and is deep enough for the largest passenger and freight steamers afloat. It is large enough to admit the navies of the world.

Quebec City is within six days' run from Liverpool. It can be reached at all stages of the tide, the river being well buoyed and lighted. It is 500 miles nearer Liverpool than New York.

The facilities afforded in the harbor for the accommodation of large vessels have been demonstrated in a decisive manner, when during the embarkation of the Canadian Overseas Contingent in September 1914, 31 ocean-going vessels ranging from 4,000 to 19,000 tons were accommodated at the deep water docks and wharves for the taking on board of men, horses, ammunition and supplies for the contingent.

Along the docks of the Louise Basins and Pointe-a-Carcy and on the North side of the embankment, there is ample room for the berthing of 22 large ocean going ships of all dimensions, with a water depth of from 26 to 40 feet at low

tide. These docks are accessible to the Canadian Pacific Railway, whose Quebec terminal is right within Quebec Harbour, and also to the Canadian Northern Railway and the National Transcontinental Railway.

The completion of the Quebec Bridge has put Quebec City and district in direct communication by rail with the South Shore of the St. Lawrence River and the United States. It has rendered possible the entrance of many railways running heretofore on the South Shore of the St. Lawrence into Quebec City, whose docks and shipping facilities can be used to their best advantage. The facilities of the Harbour of Quebec can be summarized as follows:

Modern Landing Sheds containing 523,000 square feet of floor area;

Deep Water Berths for 22 vessels drawing up to 40 feet at low tide;

50-ton Floating Crane;

Gantry Dock Cranes and Locomotive Cranes available at all times for handling cargoes;

One Grain Elevator with a capacity of 250,000 bushels;

One Fireproof Concrete Grain Elevator, with a capacity of 2,000,000 bushels, with Grain Galleries and Conveyors; loading capacity 60,000 bushels per hour. It has also a Grain

Quebec City Ready for the Great Gathering

All Details for Twelfth Annual Convention of Canadian Lumbermen on February 4 and 5 Arranged—President Power's Message to the Members

Everything is rapidly rounding into shape for the Twelfth Annual Convention of the Canadian Lumbermen's Association, which will be held at the Chateau Frontenac, Quebec, on Wednesday and Thursday, February 4th and 5th. From assurances received by Secretary Hawkins, of Ottawa, it is believed that the number who will be present this year will exceed the attendance at any previous gathering of the industry.

The local committee at Quebec is working diligently under the direction of Sir Wm. Price, chairman, and Paul G. Owen, secretary. Mr. Owen is favorably known to the lumbermen of the East, being also secretary of the Province of Quebec Limit Holders Association, and he can be depended upon to see that everything goes along with a dash and a swing.

The ancient and walled city of Quebec, renowned for its winter sports and bracing atmosphere, its quaint buildings and narrow streets, splendid vistas and historic associations, will leave nothing undone to add to the enjoyment and pleasure of all the visitors. The Quebec lumbermen are certainly on the job and are going to make the twelfth annual meeting something to be remembered.

Do Not Neglect Getting Vaccinated

According to recent indications it will be necessary for all delegates from Ontario and the West who attend, to be vaccinated, or show a certificate that they have been "scraped" within the past seven years. The latest advices received from the Health Department of Montreal are that this precaution is necessary before anyone will be allowed to enter either that city or the Province of Quebec. It seems there is little hope of the regulation being rescinded in the meantime, and it is well to save delay and disappointment on the trip. It is learned that no one can visit Montreal who has not been inoculated.

It is also important that reservations should be made at the Chateau Frontenac well ahead of time as another convention will be held in the Ancient Capital about the same time.

A large number of the lumbermen will be accompanied by their wives, and every preparation is being made to entertain the ladies and see that not a dull moment is spent. Quebec in the winter time offers plenty of outdoor exercises in the way of skating, tobogganing, ski-ing, coasting, snowshoeing and other exhilarating pastimes. The warmth and sincerity of the welcome which will be accorded the visiting manufacturers, wholesalers and exporters of wood products will make the journey worth while. There is no need of enlarging upon the various features of the business and social features of the two-days' convention, as the subjoined programme amply outlines what each day will bring forth.

Many friends in the lumber industry will regret to learn of the continued illness of H. B. Poliwka, one of the seven directors

of the Association, whose term expires this month. Mr. Poliwka is at present a patient in the Jeffrey Hale Hospital in Quebec, and may not be able to attend the sittings of the C. L. A. He has been a most lively and zealous advocate of this organization, and it would be a compliment to his work and worth to see that he is re-elected a director.

During the past few days Mr. Frank Hawkins, secretary of the Canadian Lumbermen's Association, has been spending some time in Quebec in conference with W. Gerard Power, President of the Canadian Lumbermen's Association, Sir Wm. Price, chairman of the local committee of arrangements, Paul G. Owen, secretary, and others. There is every prospect that the forthcoming meeting of the Canadian Lumbermen's Association will stand out as one of the great trade gatherings of 1920. Every member should make it a point to be present and not only come along but bring his good lady. The lumbermen and citizens of Quebec will be glad to do the rest.

Proceedings of the Meeting

Wednesday, Feb. 4th

- 10.00 a.m. Opening session. Address of welcome by His Worship, The Mayor of Quebec. Business continuing until—
- 1.30 p.m. Luncheon at the Chateau Frontenac tendered by the Quebec lumbermen to the visitors.
- 2.30 p.m. Business session resumed.
At this hour also provision has been made for sliding on the terrace, to be followed by a Tea at the Chateau.
- 9.30 p.m. Informal Dance and Supper tendered by the Quebec lumbermen. Tables will be provided for Bridge.

A Championship Hockey Match takes place at the Arena in the evening. Any of the visitors who wish to see the match will be the guests of the Quebec lumbermen on notification of their intention before noon of Wednesday 4th.

Thursday, Feb. 5th

- 10.00 a.m. Business session resumed. Election of seven Directors.

The Local Committee will have conveyances on both Wednesday and Thursday at the disposal of the visitors, with guides, to allow of visiting points of interest in and around Quebec, but on Thursday morning it is proposed to visit the Montmorency Falls and Ste. Anne de Beaupre, a luncheon being tendered by the Local Committee at Kent House with sliding and dancing afterwards; then return to the

Sir William Price,
Chairman of Quebec Reception Committee

Major H. R. Goodday,
Member of Quebec Reception Committee

John Levie,
Member of Quebec Reception Committee

C. V. Norris,
Member of Quebec Reception Committee

H. R. Van,
Member of Quebec Reception Committee

Col. Walter J. Ray,
Member of Quebec Reception Committee

Chateau Frontenac, for Tea, the Quebec ladies being hostesses.

The Quebec and Victoria Curling Clubs will welcome visitors to play on the rinks.

7.30 p.m. 12th Annual Banquet of the Canadian Lumbermen's Association. The speakers, so far as arranged, are His Honor, The Rt. Hon. Sir Charles Fitzpatrick, P.C., G.C.M.G., Lieut.-Governor of the Province, and The Honorable Sir Lomer Gouin, Premier of the Province.

Particular emphasis is laid on the fact that ladies will be prominently represented at the Banquet, and it is hoped that a large delegation of visiting ladies will attend this Convention.

Friday, Feb. 6th

Arrangements have been made for Friday morning to take the visiting delegates and ladies for a trip on the River on the Government Ice Breaker.

A letter received from the Secretary of the Local Committee says:

"From the Programme you will note that the whole two days will be devoted to entertainment of the visitors and practically they can take in any amusement or distraction they may wish at the expense of the Committee. In short, Quebec will be owned for the time being by the visiting Lumbermen and the members of the Committee will be at their disposal for directing or accompanying them to any of the amusements or pastimes. It may be stated that a Ladies Committee will also be on hand to receive the visiting Ladies and to look after their welfare."

Clarion Call from President Power

I am pleased to accept your kind invitation to use the columns of your valuable paper as a medium to reach all the members of the Canadian Lumbermen's Association, to extend to them an invitation to the Annual Meeting, which will be held in Canada's great winter resort—Quebec City on Wednesday and Thursday, February 4 and 5.

The late war and its incidental unrest has left us all a legacy of difficulties. To my mind these difficulties can be handled best by the trade as a whole in getting together and studying the situation from the viewpoints of one another. That is primarily the object of our Association, and it would be a great pity if any of the members miss the opportunity that the Annual Meeting affords to discuss and study the difficulties peculiar to the trade.

Not only as President of the Canadian Lumbermen's Association, but also as a Quebec lumberman I extend a most hearty invitation to attend the meeting. Apart from the benefits to be derived from an attendance in a business way, the lumbermen, and I might say the citizens of Quebec, are preparing to give the members a right royal good time while in the city.

I thank you for your kindness in affording me the use of your columns.

W. GERARD POWER,
President Canadian Lumbermen's Association.

St. Pacome, Que.
January 9, 1920.

William Power,
Veteran Member of Quebec Lumber Industry

John F. Burstall,
Well-known lumber exporter of the Ancient Capital

Ed. Harper Wade,
Prominent member of Quebec export lumber trade

Practical Advance on Seasoning Wood

Trunk of Tree Freshly Cut Contains Fifty Per Cent by Weight of Water—Influence of Atmosphere

No matter how long a piece of wood is kept in a seasoning shed, it never attains a condition of perfect dryness. The surrounding air will always communicate a certain degree of moisture to a porous material. Wood is permeable to air—especially to very moist air—and, in time, any given external condition will establish itself in the interior of the wood as well. But wood is more than porous—it is absorptive—and if placed in air that is quite dried of its moisture, will continue to retain a portion at least of its original quantity of water, says Dr. J. Hudson Davies.

The trunk of a tree freshly cut down will contain 50 per cent., by weight, of water. (The sap wood contains more than this percentage, the heartwood less.) When the trunk is allowed to remain out of doors, more than half of this water will evaporate in the first few months; if the trunk is sawn into planks and stacked in an open yard, the water will be further reduced to 12 to 15 per cent. of the total weight; if it is taken into an ordinary living-room, the amount of water in it will be brought down to 8 to 10 per cent.; if it is put into a drying kiln operating at a temperature of 150° to 180°F., only 2 to 4 per cent. of water will be left; but though the temperature is raised to 300°F. (when chemical destruction begins to set in), water will still be given off.

Immediately wood is taken out of a kiln of this description it begins to absorb moisture again. In a week it will have regained 5 to 6 per cent. moisture; in a month or so its condition, if kept out of doors, will be normal again (that is, 12 per cent. of the whole weight will be due to moisture).

As wood gives off the moisture it contains, a proportionate shrinkage in its volume takes place. One of the objects of seasoning is to reduce the moisture to the proportional limit observed between the wood and the air by which it is surrounded; and, as stated, in reducing the moisture the reduction of volume is also achieved. Neither natural seasoning, nor kiln drying at temperatures below 200°F. will affect the capacity of wood for taking up additional moisture when there is an excess of humidity in the air, and whenever wood takes up moisture it increases in size. If a piece of wood is at any time charged with water to 50 per cent. of its weight, it will then be as large as it originally was in the green state. (A piece of heartwood immersed in hot water will swell out to be larger even than its volume was in the living tree.) This faculty of resuming original size, of being larger and smaller according to atmospheric conditions, this hygroscopicity in wood, is one of the most difficult problems the woodworker has to deal with. To paint woodwork or to varnish it makes little difference to these qualities, and in all places where wide areas of woodwork are required the craftsman is obliged to adopt some method of nullifying the effect of, or of concealing altogether the "working" of the various pieces of wood, after they are placed in position. Panels have to be left unsecured at the edges, ledge keys must be glued at one end only, weather-boarding nailed at one side, and so on; or else the various pieces of wood must be so framed that the greater or stable part of each dimension of the area consists of timber placed lengthwise. But the combined precautions of intelligent framing and the application of protective coats of paint fail to secure immunity from hygroscopic effects. Closely fitted windows and doors afford many forcible examples of this fact by jamming fast during the wet months of the year. While wood is sensitive to changes of temperature, it is doubly affected by the atmospheric moisture as well as low temperature of the winter months.

The majority of the wood preserving processes refer to matters connected with durability; and, with one or two exceptions, no mention is made of the effect such processes have upon shrinkage, etc., though undoubtedly many of the impregnating-precipitating processes are beneficial. But within the past few years kiln drying has made very rapid advances, and it is now a recognized fact that the application of sustained heat (under considerable air pressure) materially and permanently reduces hygroscopicity. The effect, when applied to green wood more especially, is known as wood-vulcanising. It is claimed that all "natural juices of the tree" are retained, and become so altered in composition as to make a solid combination of some kind, in the wood cells.

This claim need not be discussed here; but it must be admitted that the aim is good, and, in order to be successful, any treatment put forward as a preventative of swelling and shrinkage in wood must, apparently, have as a basal idea one of the following two conditions: (1) a chemical alteration in the substance of the cell wall, imparting to it complete stability, or (2) full occupation of the cell cavities and vessels by a solid agent that is insoluble in water and capable of resisting volatilization at all ordinary temperatures.

General Conditions in Lumber Line

The last issue of the Labor Gazette, Ottawa, in reviewing general conditions in the lumber trade, says: The lumber industry continued quiet in Charlottetown. At St. John the saw and shingle mills were still running. A shortage of men was reported for the camps round Quebec. The saw and shingle mills shut down for the season. A similar shortage was felt at the camps at Sherbrooke. More men were available at Ottawa and Hull for work in the lumber camps during November, though not enough to meet the requirements. Sawmills were mostly closed down by the cold weather, but many of the sawmill employees continued to work in other mills. Peterborough reported lumbering very active for the season of the year, all available men being employed in the camps. The sawmills in most instances concluded operations. A scarcity of men for the lumber camps was reported from Sault Ste. Marie, and at Port Arthur and Fort William it was reported that only about 35 per cent. of the men asked for had been secured. Fernie reported activity in the lumbering industry, logging operations proceeding on a large scale with prospects for a record cut during the season. Crews were at work in construction of new camps, but early cold weather hindered this preparatory work. The saw and shingle mills at Vancouver were reported to be busy, and at Victoria the logging and lumbering industry continued active, exports being exceptionally heavy.

Midland People Endorse Hospital Extension

The elections in Midland, Ont., centred round a by-law granting \$30,000 for the extension of St. Andrew's Hospital, the residential property of Mr. Manley Chew, lumberman, which was purchased by Mr. James Playfair, lumberman, and presented by him two years ago to the town as a hospital. A year and a half ago a by-law was carried granting \$20,000, but was declared invalid by the Railway & Municipal Board because the town had not been formally divided into wards. The matter was taken before that body by Senator W. H. Bennett, who bitterly opposed it on this occasion, when the amount was raised by \$10,000, owing to the increased cost of labor and material. This time the vote stood 629 for and 110 against. The grant is conditional upon another \$20,000 being raised by private subscriptions. A second by-law granting a loan of \$15,000 to the Copeland Shoe Pack Co. was carried, practically by the same vote. The rate-payers expressed a preference to replace the present system of School Trustees by a Board of Education.

First 100,000 Houses in Britain

Sir Kingsley Wood, M.P., Parliamentary Secretary to the Ministry of Health, speaking in London, Eng., on December 3, declared that one of the surest ways to promote Bolshevism at home was either to refuse to face the facts or, as some were doing under the guise of false economy, openly advocate the abandonment of the Government's housing programme.

It was not only undesirable but impracticable for the State itself to build houses. Local authorities had not been unsuccessful, and the fruits of their work would be apparent in the new year. It might well be into May or June, when there would be 100,000 municipal houses either completed or in course of erection.

No fewer than 200,000 more men were required in the building operations, and it could be confidently said there was enough work in the country for the trade for the next 10 years. When the facts were fully known, labor, he felt, would patriotically respond.

Western Lumbermen Will Meet in Winnipeg

The 29th annual convention of the Western Retail Lumbermen's Association will be held in Winnipeg, at the Royal Alexandra Hotel, on January 28th, 29th and 30th.

Some of the brightest minds in the lumber industry will address the convention. The best rates on the railways available at this time, have been secured. These are to be fare and three-fifths for the round trip from any point in the West. This is the first year in several years that it has been possible to secure cheap rates for conventions.

One of the most peculiar accidents in connection with the 70-mile gale that swept St. Thomas, Ont., and district, recently, occurred in the St. Thomas cemetery. The top of a huge pine was snapped off and driven a distance of 250 feet or more, knocking over several large monuments and tombstones. One of the limbs of the tree was driven into the frozen earth to a depth of six feet, penetrating the cover of a coffin.

Building Up Trade With Farmers

How Retail Lumberman Can Interest Rural Customers
In Erection of Implement Sheds

By A. S. Fisher, Barrie, Ont.

The year 1919 has been an exceptionally good one for the retail lumber dealer, more particularly for those located in manufacturing centres. The shortage of dwellings caused by the cessation of building operations during the years of war, and the insistent requisition for houses which has met with such good response, have created a demand for building material quite in excess of the supply in some lines.

But there are many other villages and towns in which there are no industries; in such places the demand for lumber has been but normal. There is, however, good business for every rural dealer who will take the trouble to look for it. There is no farming community in Ontario, whether it be in Parry Sound, Muskoka or in the best farming district of the province, where the live dealer may not get considerable trade if he gets after it in the same manner as the wholesaler, the insurance agent, the implement representative or any other man who has a commodity to sell. There is no need for the yardman to lose any time during the building season to do the work which is suggested.

Some fine day during the winter, let him take a drive up the side lines and concessions of the townships nearest to his business location. As he rides along he may see that on nearly every farm there is a chance for business if a little judicious talk is used. He will observe implements of every description lying in the fields, lane and barnyard without protection. In fairness to himself the farmer cannot mistreat his machinery in this manner.

If the farmer was shown that, by the erection of an implement shed (which would cost but little more than a new binder) he could prolong the usefulness of his machinery, so that instead of having to replace the equipment every five years, he could obtain over twenty-five years of service, he would be much interested. If the farmer were given these facts and the dealer had with him plans for the shed to illustrate his business talk, there would not be many yeomen who would pass up the proposition.

During 1917-18 a series of articles appeared in the O.R.L.D.A. Bulletin, dealing with the implement shed question, but as far as the retailer is concerned, it is thought little was accomplished.

One dealer in Eastern Ontario did take the matter seriously. He used the articles referred to in his local papers and called the attention of his farmer customers to them, when they visited his office, with the result that in the fall of 1918 he disposed of the material for twelve sheds, the value of which was upwards of three thousand dollars.

This dealer did not make very strenuous efforts to get this business, but it is evidence of what may be accomplished in this line if the yardman is disposed to get after trade rather than wait around for it to come to him.

Methods of business are continually changing, and while it may not have been the custom in the past for the retailer in dull periods to get out and call on his neighbors in a business way—except perhaps to make collections—it might be worth while now to try a friendly call for new business. Try it during 1920 and watch the satisfactory results that will be obtained, Mr. Retail Lumberman.

Did Not Explore the Matane District

There appeared in a recent issue of the "Canada Lumberman" an interesting report of the exploration made on the North shore of the St. Lawrence by Major Barclay. In connection therewith it was stated that Mr. Swezey and he went down the river as far as Matane and from North of that point into the woods. It seems that this statement has created the impression that Messrs. Barclay and Swezey explored lands in the Matane district and that the Major's remarks regarding the logging methods applied to that district. This is apparently not the case. These gentlemen took the boat at Matane and went to the North shore of the St. Lawrence, where they explored, but they did not make any exploration in the Matane area at all, as the context might lead the reader to imagine.

Hocken Lumber Co. Operating Winter Mill

The Hocken Lumber Co., Limited, Toronto, have begun the operation of their winter saw mill at Deer Lake, 20 miles north of Parry Sound. The mill is equipped with a circular saw, edgers and trimmers and about 40,000 feet a day of white pine and hemlock will be cut the mill running two shifts of ten hours each. The mill has been operated for three seasons from a hot pond and is now very busy. During the past year the Hocken Lumber Co. sawed between five

and six million feet of red and white pine at their mill at West River, twelve miles south of Espanola. The company are conducting four logging camps, three near West River and the fourth at Deer Lake. This is double the number of last season and the output of logs will be greatly increased.

Freight Rate Increase is Continued

With the rescinding of the various orders-in-Council effective Dec. 31, 1919, the increased freight rates which came into force Aug. 12, 1918, would hold reverted to the old basis yesterday. According to the Toronto Board of Trade traffic department, however, the Board of Railway Commissioners for Canada, acting under section 325 of the Railway Act, has issued a general order continuing the 25 per cent. increase on and from Jan. 1, 1920.

The 25 per cent. increase was a war measure and came into effect by an order of the Privy Council on Aug. 12, 1918, which gave an increase of 25 per cent. on freight rates, except as regards a few commodities such as coal, etc.

Death of Leading Eastern Lumberman

J. B. Gregory, of Fredericton, N.B., passed away recently in Chicago, to which city he went a few weeks ago to spend the winter with his daughter, Mrs. (Dr.) Kaufman. Previous to his departure he had been living in Fredericton, and his health had not been of the best since he suffered a stroke of paralysis some months ago. The

J. B. Gregory, Fredericton, N.B.

deceased is survived by one daughter, Mrs. (Dr.) Kaufman, of Chicago, and one son, Ralph, of Fredericton. The late Mr. Gregory was 71 years old and was a native of Fredericton, but lived much of his time in the United States. For many years he was manager of a sawmill at Saco, Maine, and later managed a paper mill in Vermont. In 1908 he assumed the managership of the York & Sunbury Milling Company and devoted particular attention to the plant of that company in Devon until failing health compelled him recently to retire from active business. The remains were interred in the family plot in Portland, Maine.

The erection of a huge paper mill at Port Arthur for the Great Lakes Paper Co., Ltd., in connection with which preliminary work has already started, will involve the expenditure of between \$5,000,000 and \$6,000,000. Mechanical pulp will be produced to the amount of 30,000 tons annually; the sulphite mill will have a capacity of 7,500 tons a year, and the newsprint mill will have a capacity output of between 33,000 and 35,000 tons a year. The power requirements will be between a minimum of 12,000 and a maximum of 16,000. The first unit of the plant will be ready to operate by December of this year, and the pulp and paper mill is likely to be completed by June, 1921.

That Canada will be shut out of the Oriental market by the action of the Canadian Freight Association, which has cancelled all export freights for pulp and paper to Seattle and Tacoma, is the contention of local pulp and paper interests. The order, which goes into effect January 15, is now the subject of an application to the railway board for withdrawal. The Riordon Sales Company, Canadian Export Paper Co., Ltd., the Montreal Board of Trade and other interested parties are preparing to fight the cancellation of export rates.

Personal Paragraphs of Interest

C. Blakely of Cox, Long & Co., Montreal, has been on a business visit to New York.

Lauder & Co. have removed their offices from Room 502 to Room 802 Kent Building, Toronto, where they have considerably larger quarters.

H. A. Rose of Rose-McLaurin, Limited, Lachine, Que., is on an extended business trip to the coast and mountain mills of British Columbia.

Wm. Robertson, of Toronto, British Columbia Lumber Commissioner for the East, spent a few days in Montreal lately, calling upon the trade.

R. E. Butler of the R. E. Butler Lumber Co., Woodstock, Ont., has been re-elected a Water and Light Commissioner of that city for the coming year.

C. G. Anderson of the C. G. Anderson Lumber Co., Toronto, who was laid up several days with illness, is able to be around again and attend to business.

Harry S. Field, wholesale lumber dealer of Philadelphia, and Mrs. Field spent a few days in Toronto recently. Mr. Field called upon a number of friends in the trade.

George Callahan, formerly of Robert Reford Co., has been appointed manager of the Montreal office of Robert Cox & Co., exporters, Coristine Building, Montreal.

O. Lane has been made assistant purchasing agent for the Laurentide Co., Grand Mere, P.Q., and will have charge of a large part of the purchases for the logging division.

A. H. Campbell of the Campbell-McLaurin Lumber Co., Montreal, spent the holiday season in Toronto, and called upon a large number of friends in the lumber industry.

W. M. Miskelly of the Kingston Road Lumber Co., Toronto, was re-elected an Alderman for Ward 8. He was an efficient and useful member of last year's Toronto City Council.

J. C. Bartram, of the Rideau Lumber Company, Ottawa, has resigned. He intends to spend a few weeks in the South, and will open an office for his own account in Ottawa on his return.

James G. Cane, of Toronto, who is one of the oldest and most prominent members of the Commercial Travellers Association, has been elected a director of the Toronto Board for the coming year.

W. R. Beatty, secretary of the Colonial Lumber Co., Pembroke, Ont., who have just completed a two year term as Mayor of that town and retired from municipal life, spent a few days in Toronto recently.

J. A. Laberge of the Laberge Lumber Co., Limited, has been elected mayor of Sudbury, Ont. His many friends will congratulate him on his election to the highest office in the gift of this progressive town.

Edward Clark, of Edward Clark and Sons, Limited, Toronto, and W. S. Kelly, manager of the Ballantyne Lumber Co., Trout Creek, Ont., left recently for Los Angeles, Cal., where they will spend the winter months.

J. M. Donovan, of Toronto, spent the recent holiday period with relatives in New York city, where he found the trade reporting business exceedingly good and the outlook for the coming year in the lumber line as promising.

Col. Robert S. Wilson and J. B. Leitch of the Wilson Lumber Co., Toronto, are spending a few days in West Virginia and other States, on a purchasing trip, and looking into the lumber supply situation for the coming year.

R. G. Chesbro, of Toronto, left recently accompanied by Mrs. Chesbro, on a trip to the Coast. Mr. Chesbro, who is the eastern representative of the Allen-Stoltze Lumber Co. of Vancouver, will spend several weeks in the West.

H. Biermans, general manager of the Belgo-Canadian Pulp & Paper Company, of Shawinigan Falls, and president of the Canadian Export Paper Company, Montreal, is on a visit to Europe, and to the headquarters of his company at Brussels.

Stephen Donnelly, a farmer and lumberman of Maple Grove Settlement, New Brunswick, is the proud father of the largest family in the Province. He and his good wife shepherd a flock of no less than sixteen children and are very proud of their offsprings.

Joseph Spears of Burk's Falls, Ont., who is now engaged in a hardwood bush operation near that town, was in Toronto recently calling upon the trade. He reports that there is about ten inches of snow in the bush in that section and a scarcity of woodsmen.

H. E. Gill, of Granville, Que., who has charge of the inspection work for Edward Clark & Sons, of Toronto, on the eastern territory, and E. T. Willman, head shipper for the firm in Quebec province, spent a few days in Toronto, recently, on business. Harry B. Miller,

of Long Island City, N.Y., formerly of the U. S. Aerial Corps department, has succeeded Mr. Willman, and is now supervising the shipping of the company in Vermont.

Charles McDonald, of Kingston, who for the past four years has been selling representative of the Fesserton Timber Co., of Toronto, in Quebec and the Eastern States, has resigned, and entered upon his new duties as manager for the Isaac Allen retail lumber business.

George A. Christopher, a pioneer resident of Ingersoll, Ont., died recently in his 88th year. He was for a long period engaged in the contracting business and conducted a planing mill. He also served as a member of the Council and had property interests in the town.

G. C. Hurdman of the Hurdman Lumber Co., Ottawa, who was a member of the Ontario Legislature until the late elections, was a contestant for the civic chair in Ottawa against Mayor Harold M. Fisher. Although Mr. Hurdman put up a strenuous fight, he was not successful in the combat.

Horace Boulton of Toronto, secretary of the Wholesale Lumber Dealers Association, Inc. and of the Ontario Retail Lumber Dealers Association, announces a second edition of himself, weighing ten pounds, and all doing well. Mr. Boulton is wearing a smile that even zero weather cannot efface.

Robert Imrie, of Dane, Ont., is now associated with A. N. Dudley, wholesale lumber, Toronto, as purchasing and selling agent. The firm are having a considerable stock of spruce, jack pine and hemlock cut for them this winter in Northern Ontario mills and report that business for the coming year is opening up splendidly.

John E. Banks, who has been appointed assistant inspector in the Toronto district of the National Hardwood Lumber Association, under H. L. Hebard, has entered upon his new duties. Mr. Banks has spent the greater part of his life inspecting hardwood lumber and held a number of responsible positions with operators in Buffalo, N. Y.

Controller Sam. McBride, wholesale lumberman, who was a contestant for the chief magistracy of Toronto against Mayor T. L. Church, was not successful in the fray but polled a remarkably large vote. Mr. McBride has been a forceful figure in the municipal arena, and his absence from the Council Chamber will be noted with regret by many friends.

M. R. Mowers, who for the past four years has been on the Toronto city selling staff of the retail department of the R. Laidlaw Lumber Co., has resigned and entered into partnership with R. C. Lambert, 90 Danforth Ave., Toronto, in the real estate and building line. They will erect several houses in the eastern section, and already have a number under way.

Wm. C. Reid recently passed away in Fergus, Ont., at the advanced age of 95 years. After taking up his residence in Fergus he went into the lumber business and operated the Glenlammond sawmill for a long period. In 1900 he retired and led a quiet life, being fond of meeting and conversing with his many old friends. His wife predeceased him twenty-eight years ago.

James Thompson, ex-M. L. A., for East Peterborough, president of the Thompson and Heyland Lumber Co., has removed from Havelock to Toronto, and taken up his residence at 48 Laws street. Mr. Thompson is also president of the Monteith Pulp and Timber Co., Toronto, and his firm is actively engaged in the pulp wood business, south of North Bay, supplying a number of the mills in the Merritt district and in Wisconsin.

Robert Mitchell, one of the oldest owners of sawmills in Canada, died at Lachute, P.Q., on December 30, aged 78. In 1870 he built a sawmill at Grenville, and after operating this for 15 years, sold it, and built another on the island opposite Calumet. This was burned down two years later, and Mr. Mitchell then purchased from the Hon. J. K. Ward saw, planing and shingle mills at Calumet. Fifteen years ago he retired and lived at Lachute.

W. C. Wilkinson, after forty-eight years' service on the Board of Education, Toronto, the greater portion of which time was spent as secretary-treasurer, has retired and was presented by the employees of the Administration Building with a fine leather club bag, fully equipped. Mr. Wilkinson made an appropriate and grateful reply. The veteran official is the father of C. W. Wilkinson, vice president of the Union Lumber Co., Toronto.

S. Bick, of the Bennett Lumber Co., Ltd., exporters, Montreal, returned recently for his visit to England. He states that the docks are congested with lumber from Canada and Norway and Sweden. Owing to the prices at which lumber is being sold by the Government the market is by no means satisfactory, in fact, lumber isn't being sold at quotations which would represent a profit to exporters if goods were sent from this side at present rates of freight.

W. C. Bell, of Ingersoll, died recently in his 90th year. He was widely known throughout Western Ontario, and was engaged for

a long while in the lumber business, operating a large planing mill. In the early days of Ingersoll he played an important part, supplying the lumber for most of the frame buildings in the town and being otherwise closely connected with structural operations. His wife died a few years ago and he is survived by five sons and two daughters.

John Moffat of Head Tide, N. B., died recently. The end came suddenly and was a great shock to his friends. Mr. Moffat, who was 79 years of age, was one of the pioneers of Restigouche. He spent the early years of his life in sailing and later was associated with his brothers, George and Robert, in the lumber business under the firm name of George Moffat & Co. at Head Tide. For a number of years he conducted a water-power, lumber and grist mill, which were destroyed by fire.

F. T. Bradley of Seattle, Wash., died recently from a stroke of apoplexy. He was a Canadian, born in Ontario 46 years ago, and had resided in Seattle for the last sixteen years. At the time of his death he was secretary of the Seattle Building Owners' & Managers' Association and was well known and influential in building construction circles throughout the Northwest. He was the organizer of the Seattle Retail Lumber Dealers' Association and also the Master Builders' Association.

Paul Blouin, superintendent of the Woods and Forests Branch of the Crown Lands Department of the province of Quebec, died recently in Quebec city. He was born in Montreal, in 1859, and studied at the Quebec Seminary and Laval University. He was admitted to the Bar in 1880. Mr. Blouin took up newspaper work and became editor of the *Courier de St. Hyacinthe* and also worked on *La Minerve* and other newspapers. He was private secretary to Hon. (Judge) E. J. Flynn, when he was Premier of the province and was later appointed superintendent of woods and forests, in which line he was considered an expert.

Lieut.-Col. Frank J. Carew, eldest son of John Carew, ex-M.L.A., Lindsay, has been elected an alderman in that town, and his many friends are congratulating him on his success at the polls. Col. Carew, who is secretary-treasurer of the John Carew Lumber Co., spent several years overseas and was the Officer Commanding No. 1 District, Canadian Forestry Corps in France. Previous to going abroad he was associated with his father in the lumber line, and now that he has returned to civilian life it is pleasing to know that he possesses public spirit. He will, no doubt, render the citizens of Lindsay good service at the municipal board.

James Magee, of Ottawa, who passed away recently after a week's illness, was prominently identified with the lumber industry during the past forty years. He was born 86 years ago and removed early in life from Quebec City to Buckingham, Que. Mr. Magee was predeceased by his wife thirteen years, and leaves two sons and two daughters, as well as one brother, Robert Magee, of Quebec. In 1878, in the waning days of the square timber industry, Mr. Magee took charge of the shipping department of Ross Bros., Buckingham. He remained with this firm some twenty-four years until they disposed of their interests to the James McLaren Co. Mr. Magee then removed to Ottawa, where he became connected with the firm of J. Burstall & Co., lumber exporters, of Quebec, with whom he remained until his death. He enjoyed perfect health up to within a few days of his passing.

Substantial Wooden Houses for Britain

Harrison Watson, chief Canadian Government Trade Commissioner, London, Eng., in a recent letter to the "Timber Trades Journal" says:—During an extensive tour of Canada, from which I have just returned, I found considerable interest was being taken in the possibility of the erection of wooden houses being undertaken in this country upon a large scale, although some ambiguity existed as to whether these houses were to be of the simple portable type, or the elaborate house which is common, not only all over Canada, but in most parts of the United States.

It would appear from more recent announcements made by the British Government that it is the latter kind which is in contemplation, which practically means houses of almost any kind of architecture, of which wood is the structural material, instead of stone or brick.

The Whalens Promote New Paper Mill

A four million dollar paper mill is to be erected at Port Angeles, Washington, to use British Columbia pulp, and will be in operation by next fall, according to Mr. George F. Whalen, who has just returned from the east after organizing capital for the new industry. The money is largely from United States capitalists.

Operation of this plant opens up another channel for better marketing of British Columbia pulp, according to Mr. Whalen. It enables the paper manufacturers to avoid the high duty on Canadian

paper. Mr. Whalen states that the demand for pulp from British Columbia is very strong and increasing rapidly. The Canadian directors of the company are Mr. James Whalen and Mr. George F. Whalen.

Two Eastern Men Always on the Job

Representatives of Leading Coast Mill Cover Large Territory in an Aggressive Manner

L. D. Barclay of Toronto, Eastern Canada representative of the Canadian Western Lumber Co., Fraser Mills, B. C., has just entered upon his eighth year of service in Toronto with that widely-known organization. He has spent some eleven years in the lumber game and has an extended acquaintance with the various departments. Born and educated in Whitby, Ont., he is a son of L. T. Barclay of the firm of Clarke, Barclay & Co., barristers, Edmonton, to which city his parents removed some ten years ago.

L. D. Barclay had his first position with the R. Laidlaw Lumber Co., Toronto with whom he spent three years in various capacities, doing everything from running a cut-off saw to selling all lines of supplies. In 1909 he went west and was tally man for a year and a half with the Canadian Western Lumber Co. He was sent East to assist Hugh A. Roe in the selling end in Toronto and Ontario. When the latter resigned to go with Mason, Gordon & Co. of Montreal, Mr. Barclay succeeded him and during the past few years has become favorably known to the trade in all the provinces on this side of the Great Lakes. He is one of the pioneer salesmen of B. C. forest

L. D. Barclay, Toronto

E. C. Parsons, Toronto

products in Ontario and booked for many a retailer in western Ontario his first car of Douglas fir. By his genial manner and courteous disposition, Mr. Barclay has made many friends not only in lumber circles but also in athletic ranks. He has always taken a deep interest in hockey, football and canoeing and is associated with a number of sporting organizations in the Beaches district of Toronto serving on the executive of several of them. The worst charge that can be laid at the door of Mr. Barclay is that he is a bachelor but rumor has it that he will remedy this defect before 1921 rolls around.

His associate is E. C. Parsons, who has just completed a successful year in the employ of the Canadian Western Lumber Co. He came East from Vancouver shortly after P. J. McCormack left Toronto for the West. While out there the latter was appointed sales manager for the Canadian Western Lumber Co. with headquarters in Vancouver. Mr. Parsons has proved a worthy successor to Mr. McCormack and has secured a good connection in the East. A native of Somersetshire, England, he spent a couple of years in the wood products business in the old land before coming to Canada some thirteen years ago. On locating the the West he was for eight years in the service of Rogers Lumber Yards, Limited, Moose Jaw, being manager of one of their line yards. After leaving this organization he was with the Retail Lumbermen's Purchasing Agency of Vancouver, in the capacity of salesman, and then went with the Pacific Lumbermen's Inspection Bureau in the grading of fir and other stock at the mills for aeroplane requirements during the closing years of the war. Mr. Parsons has had a wide insight into the manufacturing, selling and inspection ends of the lumber and timber business.

Lumbermen's Section Board of Trade

Officers Elected for the Coming Year and Arrangements Made for Reunions of the Members

Enthusiastic and harmonious was the annual meeting of the Lumbermen's Section of the Toronto Board of Trade, held on Jan. 7th. There was a good attendance and a fine spirit pervaded the gathering.

The outlook for the coming year was informally discussed, and all agreed that the prospects were most promising for successful and active business during 1920. A. C. Manbert, Chairman, presided, and after stating briefly the object of the gathering, the report of Secretary H. Boulton was presented and the election of officers was proceeded with. Several nominations were made and a ballot taken in one or two instances. The result was as follows:

Chairman—A. C. Manbert, (Canadian General Lumber Co.)

Vice-Chairman—W. J. Lovering.

Secretary—H. Boulton.

Executive Committee—T. A. Paterson, (Mickle, Dymont & Son), W. C. Gall, (Gall Lumber Co.); J. B. Jarvis, (Elgie & Jarvis); A. E. Clark, (Edward Clark & Sons); C. G. Anderson, (C. G. Anderson Lumber Co.)

The nominations of representatives to the various branches of the Board of Trade were then proceeded with:

Board of Arbitration—W. J. Lovering.

Canadian National Exhibition Board—Sam. McBride.

Council of the Board of Trade—Hugh Munro.

C. W. Wilkinson, who has been a member of the Council for the past year, is retiring, and the importance of the lumbermen nominating and electing a man for this representative section of the Board of Trade was pointed out by J. L. Campbell, A. E. Eckardt, A. E. Clark, John B. Reid and others. Many important matters came up from time to time, such as freight rates, demurrage, transportation and other problems, which are of absorbing interest to the lumbermen.

It was thought that Mr. Munro, who has enjoyed a long and favorable connection with the trade, would make an ideal member of the Council for 1920, and the members of the section have promised to give him most energetic support in the campaign.

Mr. Manbert and Mr. Lovering returned thanks for the honor reposed in them in again being elected to the positions of chairman and vice-chairman, respectively.

The matter of the annual dinner was discussed. In view of the fact that the Wholesale Lumber Dealers' Association of Toronto have monthly dinners in connection with their regular meetings, and as the annual convention and banquet of the Ontario Retail Lumber Dealers' Association will take place in Hamilton on February 24th and 25th it was felt that it would not be advisable to hold such an event at this particular time. A reunion of the wholesalers in the good old summer time would be preferable, and A. E. Clark, who has an attractive summer home at Grimsby, extended a hearty invitation to the members to spend a day with him at a date to be named later, either in July or August. Mr. Clark promised the visitors a cordial welcome. Not to be outdone in gallantry or hospitality Mr. Manbert presented a pressing invitation to "the boys" to come out to his farm in Oakville in cherry-picking time, and he would show them what real entertainment was.

The membership of the Lumbermen's Section is growing constantly and the section is regarded as one of the liveliest factors of the Board of Trade.

The Hamilton Convention Will Be a Hummer

The annual convention of the Ontario Retail Lumber Dealers' Association will be held at the Royal Connaught hotel, Hamilton, on Tuesday and Wednesday, February 24 and 25. The details of the programme are now being drafted and many important matters will come up for consideration and discussion.

Just now the Secretary and officers of the association are conducting an active membership campaign and all those who belong to this progressive organization, which is just two years old, but remarkably healthy and vigorous, are endeavoring to interest all the retail lumbermen in their respective districts to become associated with the good work.

The retail lumbermen of Hamilton will entertain all the visitors to a dinner and great preparations are being made for the event. There will be several important reports to present at the convention and aggressive action will be taken upon a number of problems, while others affecting the interest and welfare of the trade for the coming year will be taken up. In the meantime, every yardman is asked to bear in mind the dates, February 24 and 25, and see that nothing interferes with his attendance.

Assurances have been received by the Secretary that the attendance this year will be a record breaker and from present indications

it looks as if over 250 wide-awake dealers will be on hand. The delegates have been assured of a hearty welcome and everything points to an unusually successful, enthusiastic and edifying gathering of the retail trade from all parts of the Province of Ontario.

Many Meetings Will Be Held in Montreal

Following the precedent of other years, there will be a week of lumber, forestry, and pulp and paper conferences in Montreal, commencing on the 27th of January, and terminating on the 30th. These will be held at the Windsor Hotel.

The Canadian Forestry Association will hold a conference on standardization on the 27th and the annual business the following day.

The members of the Woodlands Section of the Canadian Pulp and Paper Association will meet on the 29th, when the report of the Committee on Legislation and Logging Operations will be discussed. A report on various experiments being made on slash disposal by the mills will be submitted, while a discussion on scaling will be initiated by Mr. Ellwood Wilson and Mr. W. Gerard Power. Members of the Quebec Limit Holders' Association and Ontario members of the section have been invited, the latter in view of the awakened interest shown in forestry matters by the new Ontario Government.

The various Quebec Forest Protective Associations will hold their meetings during the week.

An Enthusiast in the Lumber Arena

E. A. LeBel, Sarnia, Ont.

A familiar figure, journeying regularly through the southwestern district of Ontario, calling on the retail lumber trade, is E. A. LeBel, who has made his home and business in Sarnia for the last 30 years. He hopes to be able to remain there the rest of his days and enjoy seeing the good old city boost ahead. Sarnia is surely now on the way of doing things, without a doubt, and Mr. LeBel states that the community is good enough for him. Thirty years ago he wandered to Sarnia from the Gaspé Coast, Que., and all of this time he has been connected with the lumber business, starting with the old Spanish River Lumber Co. In the fall of 1904 he took over their remaining interests, along with that of his uncle's, John D. LeBel, and carried on in the whole-

sale line until 1909, when a company was formed, known as "The LeBel & Turnbull Lumber Co." In 1911 they were totally burned out and with not sufficient insurance to cover heavy losses, they wound up the business. Since then Mr. LeBel has been doing a jobbing and commission business, largely in hardwoods and British Columbia products. He enjoys a wide lumber connection and has found trade particularly good of late. Mr. LeBel says his whole aim is to supply his customer at the lowest possible wholesale prices and furnish goods strictly up to grade and condition and in doing so he has no fear of continuation of his share of his customer's trade. At the same time Mr. LeBel reports that he sees but slim chances for cheaper lumber for some months to come. The demand and inquiries are great and even now the supply is not nearly equal to the consumption, so it will, in all likelihood, be a common thing for retailers to list up their stock of ordinary common white pine and their substitutes to \$90 and \$100 per M, according to sizes, lengths, etc. This, they will certainly have to do to leave them usual profits over manufacturing and wholesale cost, freight, handling, etc., declared Mr. LeBel, who thinks it is up to the consumer or builder to govern himself accordingly as far as high prices are concerned.

The Whalen Pulp and Paper Mills, Limited, of Vancouver, B.C., are now in active operation. The company operate three plants—one at Mill Creek, Howe Sound; one at Swanson Bay, and one at Port Alice. Port Alice employs 500 hands, turns out 70 tons of pulp and 200,000 feet of lumber per day. The company also have nine logging camps on Quatasino Sound and have brought Davis rafts from the mainland. Coal is at present being used by the company, but a tunnel is being driven through the mountain, tapping Victoria Lake, which will give over 300 feet head and great power, dispensing with the steam plant.

How Will Aerial Patrol of Forests Work Out?

Has Aviation Greater Opportunities in Forestry Work Than in any Other Commercial Enterprise?—Operating 'planes for Practical Purposes

Although lumber concerns have been doubtful with respect to the use of aircraft in forestry work, yet it is safe to predict that the time is not far distant when all large concerns will operate 'planes over their limits, says an article in the Canadian Forestry Journal.

However, unless great care is exercised in the selection of machines and personnel, the pessimists will certainly win the day.

There are two broad classifications of aircraft, machines fitted with wheels for alighting on terra firma, and those constructed for alighting on water. The land machine is light and more efficient as regards fuel consumption, but owing to the lack of suitable fields for landing, it must be disregarded for our forestry work. For the flying boat or seaplane the Creator has given us thousands of square miles of perfect landing area, free from the cost of maintenance.

Aviation has greater opportunities in forestry work than in any other commercial enterprise. The logging superintendent wishes to visit operations a hundred miles from headquarters; the trip generally keeps him away from the office four or five valuable days. In place keeps him away, he makes the trip by air, and alights on the shore of a lake a couple of miles from the site of the operations two hours after leaving home; he makes his inspection and returns home the same day. During the trip the aviator was not merely acting as chauffeur, but performed a double fire patrol over two thousand square miles of territory, and, if the weather proved favorable, made aerial photographs of a hundred square miles of country which probably had never been mapped, and only very inadequately explored.

Splendid Results in Mapping

Let us cite another instance: an explorer is sent to make a detail report of a certain area of timberland. Before doing his ground work, he flies over the district, where he is able to study the relief map beneath him, making full notes of drainage, "burnt over" swamps, and density and types of growth. Whilst enabling the explorer to make these notes, the pilot has covered the ground in such a manner that a complete photographic mosaic has also been obtained. The portion of this area of value to the concern interested may then be explored on foot, and the tramp through the burnt-over and swamp eliminated. The increase in the value of this combined information, viz., aerial observation, photographic mosaic and ground report, over the old method of ground exploration can be well appreciated.

Machines used solely for the purpose of fire patrol will undoubtedly prove expensive, and it is through the performing of work such as outlined above that fire protection work can be carried on. While in the air on other missions fires can be as effectively spotted as though machines were there for that special reason. The objection is, of course, raised that this auxiliary patrol work would prove inefficient, owing to the fact that machines would only be in the air when required by the concerns operating them, but their schedule of operations could quite readily be arranged in such a manner that the best possible surveillance of the whole area would coincide with the other work to be done.

With a slight alteration in the suction pipe of the Fairbanks-Morse fire pump, any medium-sized seaplane can transport this apparatus to a lake or river near a fire in a very short space of time. Several pumps and a number of men can, in this manner, be placed on the scene very rapidly. Practice has shown that one of these pumps is as effective against a conflagration as the labors of fifty men. Whether 'planes are being operated by Forest Protective Associations, or other lumber interests, forest fires must be given priority over all other work, and some agreement must always exist whereby a private concern may be reimbursed for work in connection with fires their planes have been instrumental in extinguishing, on other lands than their own.

Ensuring Safety for Human Cargo

Several radio telegraph stations should be dotted over the area of flying operations, so that a fire may be reported immediately it is sighted, or a forced landing investigated by a second machine. Undoubtedly every air base should have at least two machines and two pilots, and it is only by this means that absolute satisfaction from the work may be expected.

No serious-thinking business man should be willing to go into flying extensively unless he can determine what factors are respon-

sible for his safety in the air, and these factors may be grouped—the safety of construction and design of the 'plane, the efficiency of the power unit, and the possibility of a safe landing in case of trouble.

Manufacturers of efficient aircraft test these 'planes by acrobatics, which strain all parts of the machine five to ten times greater than they are ever called upon to stand in commercial flying, and the liability through constructional faults is nil, if the machines are cared for by a competent staff. The old danger of fire is also eliminated on a good make of machine, when properly cared for.

With the best make of motor car, you can not guarantee a long trip with absolutely no engine trouble; the same thing is true of an aeroplane motor. The gas engine has been greatly improved, but is not perfect. To overcome this uncertainty, we must, when using only one motor in a 'plane, fly at an altitude of four or five thousand feet, which affords an opportunity to land on a lake, if necessary, about four miles distant in any direction, this distance being dependent on the direction and strength of the wind.

It may be interesting to the uninitiated to note that an airplane operates the same whether the motor is running or not, and can maintain the same speed. The motor does not govern the speed of the machine in the air, but enables the pilot to attain or maintain a given height.

Mr. Dewart Busy Writing Letters

H. Hartley Dewart, K.C., of Toronto, has drawn the attention of Hon. Beniah Bowman, Minister of Lands and Forests for Ontario, to two proposed timber sales, regarding which there is, according to the Liberal Leader, considerable ground for criticism. One of these deals with the timber on an area south of Minnetakie Lake, in the district of Kenora, and the other is an area of 48 square miles in the township of Hele, in Thunder Bay district.

Mr. Dewart takes exception to both sales for the reason that since the woods are deep in snow it will be impossible for any person intending to tender to cruise and estimate the timber before next spring. This suggests to Mr. Dewart that persons possessed of information that the former Government proposed to sell the timber on these berths could have had estimates made and thus been in an advantageous position for tendering at the present time, when others not close to the former Minister would have little upon which to base a tender. Mr. Dewart also objects that the first area was not advertised in the local papers.

In commenting upon the fact that there is a feeling that an effort is being made to tie up the timber in the interest of friends and supporters of the late Government, Mr. Dewart says:

"I am asked to urge that you take independent advice upon this matter other than from the official, particularly in charge as Deputy Minister, and those who are the henchmen of the recently defeated Hearst Government."

Operation of Wood Distillation Plants

The Dominion bureau of statistics have issued a booklet dealing with wood distillation. The manufacture of munitions on a large scale gave considerable impetus to this industry.

Thirteen plants, eleven of which are distillation plants, and two refineries furnish the entire production and are, with two exceptions, controlled by the Standard Chemical Iron and Lumber company of Canada, Limited. According to location, there are four distillation plants and one refinery in the province of Quebec and seven distillation plants and one refinery in the province of Ontario.

Crude wood alcohol is refined by fractional distillation to produce methyl alcohol and methyl acetone or acetone-alcohol. Formaldehyde is a product of methyl alcohol. Acetate of lime is sometimes sold as such, but for the most part is converted into acetone or into acetic acid. Charcoal is sold either for domestic fuel or for the manufacture of charcoal iron. The by-products, gases, oils, and tar are burned under the retorts, with the exception of certain oils of commercial use and value.

High Position for Canadian Boy

L. M. Ellis, Auckland, N.Z.
Director of Forestry

L. McIntosh Ellis is a Canadian who is rapidly winning his way to the front. He has just been appointed Director of Forestry for New Zealand and enters upon his new duties for the Government. This is a tribute to the high standing of the profession of forestry in Canada, due no doubt, to the excellence of academic training at universities such as Toronto, Laval, New Brunswick, etc.

Mr. Ellis graduated with honors from the Faculty of Forestry, University of Toronto, in 1911, taking the degree of B. Sc. F. Later he was assistant superintendent of the Forestry Branch of the C. P. R. until he enlisted in the C. E. F. in 1916. Mr. Ellis served in France on Headquarters' Staff Directorate of the Canadian Forestry Corps and as assistant

to the Chief Forestry Officer until disembodiment in June 1919. From then until his recent appointment he served as Advisory Forest Officer, Board of Agriculture for Scotland.

The subject of this reference was selected as the Director of Forestry for New Zealand, from a wide list of applicants.

He spent a few days in Toronto during the present month on his way to assume his new work in the far-off islands.

The Worth of Canada's Timber

The forestry situation in Canada is distinctly more favorable than in the United States, due to the great bulk of the forests being on crown lands, and thus subject to such cutting regulations as may be prescribed by the governmental agencies concerned, either Dominion or Provincial, as the case may be, says an exchange.

The fact remains, however, that only to a comparatively small extent do the existing cutting regulations provide to anything like an adequate degree for the perpetuation of the forest on cut-over lands. Studies made by the Commission of Conservation show, for example, that in the pulp-wood forests of Eastern Canada, present methods of cutting are resulting in the steady deterioration of the forest, and are rapidly rendering great areas relatively unproductive.

The demands for export material are steadily increasing. Not only does the United States take around 40 per cent. of the pulp-wood produced in Canada, but there is an export business of wood-pulp and of paper, to the United States, Great Britain, France and other countries, aggregating over \$26,000,000 in 1917, and probably around \$35,000,000 in 1918. The exports of lumber add very handsomely to this total, and are becoming much greater through shipments to Great Britain and other European countries.

The value of Canadian forests, not only in maintaining home industries but in building up a great export business and thus rendering the balance of trade more favorable, can scarcely be over-emphasized.

The necessity for recuperative measures, now found to be so urgently required in the United States, is rapidly becoming obvious also in Eastern Canada, and merits the best consideration of the governmental agencies concerned. In addition to the investigations of the Commission of Conservation and the Dominion forestry branch, the provincial forest services of Quebec and New Brunswick have the whole situation under very careful consideration.

Laurentide Company Retires Its Bonds

In Montreal the last outstanding six per cent. twenty-year bonds of the Laurentide Company, Limited, maturing were retired recently by the pulp and paper enterprise, the transaction involving the payment approximately of \$550,000. The original issue was for \$1,200,000, the deed of trust covering the company's mills, lands, plant, factories, machinery, water-power and timber licenses. At the end of the company's fiscal year on June 30 last the par value of the securities of this class outstanding had been reduced to some \$50,000, which amount was further contracted in the period between mid-summer and the end of 1919.

The company thus embarks upon the year 1920 entirely free of funded indebtedness, with the only outstanding capital obligations consisting of \$9,600,000 of common stock, which now has behind it the immense resources of the pulp and paper concern, inclusive of

the valuable investments held by Laurentide, prominent among which are 72,000 shares of Laurentide Power carried on the parent company's books at the nominal value of \$5 per share or \$360,000, whereas at the current market quotation the power stock has a value in excess of \$5,500,000. Conservative estimates in well informed quarters place the total value of the securities held by the enterprise at between \$7,000,000 and \$8,000,000, against which the only capital indebtedness as already stated is \$9,600,000 in common stock.

The Supplies of Pulpwood Estimated

When the stocks of paper and pulp companies are kiting, reports of the commission of conservation as to available supplies of pulp wood are of pertinent interest. So far as the immediate future, or, for that matter several years, are concerned, the wood supply is big, but much of it is commercially inaccessible, while a very big factor is the enormous annual destruction by the bud worm.

A rough calculation by the commission's chief forester, Mr. Leavitt, gives what he thinks is a liberal estimate of provincial supplies of pulp wood as follows: Quebec, 300,000,000 cords; Ontario, 200,000,000 cords; New Brunswick, 33,000,000 cords; Nova Scotia, 30,000,000; British Columbia, 255,000,000. There is not much information available to show the supplies of the prairie provinces.

By way of illustrating the damage done by the bud worm, it is estimated that 25 per cent. of the balsam fir in Quebec is dead or dying, and 75 per cent. in New Brunswick. The Ontario situation is much better. Recent reports of growth in some sections of Quebec show only 30 board feet per acre, or one 6-inch tree per acre per year.

Another authority, writing on this subject says: "The figures are so appalling that I dare not commit the result of my finding to print, but the losses are so enormous that no one will deny that they far overbalance the annual growth in Canada and the United States." In arriving at estimates of supplies, some companies have simply taken a map and arbitrarily figured out the number of cords per acre. The more important rivers of Canada, this authority points out, have been logged from the earliest day, and while the supply of some miles is fairly adjacent, that of others will take two years to flow down to the plants. It takes from 100 to 150 years to grow a four-inch tree. The pulp supply of the eastern states is practically exhausted, but the annual consumption there is 5,500,000 cords. Considering the way the pulp lands are being cut or destroyed by fungi, fire or bud worms, the conservation commission is emphasizing the need of greater preventive methods in more care in cutting and particularly reforestation. At the present rate, it will be only a few years until the commercially accessible supplies of many miles are exhausted, and the belief here is that many of the paper companies are heavily discounting the future."

Are You a Hitter Below the Belt?

The price-cutter is worse than a criminal. He is a fool. He not only pulls down the standing of his goods, he not only pulls down his competitors, he pulls down himself and his whole trade. He scuttles the ship in which he, himself, is afloat.

Nothing is so easy as to cut prices and nothing is so hard as to get them back when once they have been pulled down.

Any child can throw a glass of water on the floor, but all the wisest scientists in the world can't pick that water up.

Who gets the benefit of price-cutting?

Nobody.

The man who sells makes no net profit and the man who buys soon finds himself getting an inferior article.

No manufacturer can permanently keep up the standard of his goods if the price is persistently cut. Pretty soon he is compelled to use cheaper materials, and to cut down the wages of his workers.

The man who cuts prices puts up the sign: "This way to the junk heap!"

He admits his own failure as a salesman.

He admits he has been defeated according to the Marquis of Queensbury rules of business.

He admits he cannot win by fighting fair.

He brands himself as a hitter-below-the-belt.

If the business world were dominated by price-cutters, there would be no business at all.

Price-cutting, in fact, is not business any more than small-pox is health.

"Price cutting is peanut salesmanship."

New Hardwood Inspector For Montreal

Arthur G. Bowler, Montreal

Mr. Arthur G. Bowler, who was recently appointed Inspector for the National Hardwood Lumber Association in the Montreal district, has entered upon his new duties and is becoming well acquainted with the trade. His address in Montreal is 179 Drummond St. Mr. Bowler began his connection with the lumber business with the Parker & Page Co. at East Cambridge, Mass., where he was yard inspector for seven years. He was next associated with his brother, Herbert W. Bowler, in forming the New England Lumber Co. of Boston, Mass., where the latter was National Inspector for four years. During the war the subject of this reference signed up with the U. S. Government as inspector of propeller woods and his last position, previous to being called

by the N. H. L. A. to Montreal was with a Holyoke firm as a road salesman. He has gained a good general knowledge of the varied needs of the trade in all activities.

Splendid Showing in Nova Scotia Timber

Hon. O. T. Daniels of Halifax has made a discovery in regard to the value of the forest resources of Nova Scotia. Hitherto, the statisticians have been putting this value down at \$5,000,000 annually. Hon. Mr. Daniels says the value is \$19,500,000. He states that those who have been computing things, have been consistently omitting very important items. It appears that no one thought it worth while to seriously consider the value of cordwood as an article of consumption in Nova Scotia, but Mr. Daniels puts this item down at \$5,000,000, equal almost to the entire sum previously estimated by those who wrote on the subject of timber. Mr. Daniels estimates the value of Christmas trees, for instance, at \$50,000 a year. Pit props, telegraph poles, and a score of other smaller articles previously forgotten, he brings in to swell his aggregate to nearly \$20,000,000 a year.

Windsor Had Great Building Year

Showing an increase of approximately 150 per cent. as compared to 1918, building values in Windsor, Ont., last year reached a record figure of \$2,601,370 as against \$1,000,000 in 1913, the banner year for Windsor.

The increase is not due to the erection of large buildings, for few permits above \$50,000 were issued. The demand for workmen's homes, which was only partly met by the Government housing plan, was in a great measure responsible for the building boom.

More than 1,000 new homes, each costing between three thousand and eight thousand, were built during the year. The majority of these were erected under the supervision of the local building commission with money loaned by the Ontario Government at five per cent. Twice the number of workmen's homes would have been built but for the shortage of material.

Last Word in Saw Mill Construction

Work has been commenced on the new mill and box factory of Gillies Bros., Braeside, Ont., from designs by J. M. Robertson, Limited, Montreal. The buildings will be of concrete and brick, a departure from the usual type of such structures. The mill, will be 192ft. by 74 ft., and will be constructed of steel encased in concrete, with the walls of brick. The sorting sheds adjoin the mill, will be of concrete, and 200ft. by 50 ft. The box factory, in the centre of the group of buildings, will be 100ft. by 32 ft., and is to comprise two stories, the ground floor being open up to the next story. The manufacturing will be done on this storey, the ground floor being used as a receiving room. This building will be of concrete and brick. The power house 72 by 58 ft., is to be built of brick, and to contain a steam turbine set, for the generation of electricity, for driving the entire machinery. The lumber for the box factory will be conveyed by a conveyor from the mill to the factory. Three double cut bandsaws and a re-saw will be included in the mill equipment. It is proposed to erect a burner for burning the waste not required. The various buildings are to replace those destroyed by fire on June 23 last, and will be of greater capacity than the old plant.

The Business Papers

It is not to be thought that the trade papers exaggerate their importance as advertising mediums, or depreciate other mediums. Nor is it asserted that the trade papers have lifted themselves above the level of other classes of advertising mediums.

But it is manifest that they have advanced far toward the goal of 100 per cent. advertising efficiency in their particular, and peculiar, field.

Beginning, not so many years ago, further down the scale of efficiency in their field than almost any other advertising medium, their publishers were not long in awakening to their true position, and setting themselves earnestly at the task of business-like reorganization and specific progress.

Rightly, these publishers have endeavored to make their papers useful to the particular lines of business they represent, and to as completely as possible cover those lines. This policy has been so persistently and intelligently pushed that now the high-class trade paper is about as near to being a 100 per cent. advertising medium as it is humanly possible to expect.

Editorially, these papers have become wonderfully effective as records of progress, exponents of methods and processes, proponents of new tested methods, suggestors of merchandising plans, advisors as to financial as well as manufacturing and selling policies—mediums of exchange for whatever is progressive and vital in all lines affecting their readers.

The trade papers have shown a degree of wisdom in perfecting themselves as advertising mediums quite unique, and also very astute and courageous. They have pursued a policy of restricting their circulation to their specific fields, and within those fields to concerns and individuals directly interesting to their potential advertisers.

The cost of producing a really good trade paper is several times its subscription price, making its production a charge upon advertising income, and consequently creating an automatic obligation to the advertisers. This is recognized by the publishers by their policy of securing as readers as nearly all of the men who have to do with purchasing and consumption as is possible, and refraining from attempts to spread circulation beyond those classes. They do not refuse to accept subscriptions from people whose interest may be purely technical, or educational, but their efforts do not run in that direction.

The high-class trade paper of to-day is more nearly a perfect advertising medium than any publication in any other field. It is nearly a perfect advertising medium, in respect to its circulation and in respect to its suggestive and advisory service to its readers and advertisers. If it were possible accurately to estimate advertising returns, it would undoubtedly be found that returns from trade-paper advertising run to higher percentages than do those in any other class of mediums.

It is not to be forgotten that the trade-paper field is different from the field of any other class of advertising mediums. It is definitely known—de-limited, as we may say. The trade-paper publishers are able definitely to appeal to about every individual in their potential fields. Their congregations are within known bounds. They know how many possible readers there are for them, and it is not difficult to locate them all.

The business interests of all possible readers of a given trade paper are almost identical. The work of the editors can be sharply focussed. The work of the publishers is laid out for them. They have that great advantage over publishers of any other class of mediums; and they surely have utilized that advantage to the full.

AN APPRECIATION BY BUSINESS

I want to say this: That I believe in, and always have believed in, the technical and trade papers. I believe that they have exerted and are exerting a very powerful and beneficial influence in advancing industry, and I believe they have a larger mission still ahead of them, a mission that will call for every bit of energy and intelligence that you gentlemen are capable of.

—Charles Piez, Pres. Link Belt Co., Chicago.

Will Branch Out for Himself in Ottawa

J. C. Bartram, Ottawa, Ont.

J. C. Bartram, who for many years has been prominently connected with the Rideau Lumber Co. of Ottawa, has resigned and is spending a few months in the Sunny South. On his return to the Capital city it is his intention to open out an office of his own in the wholesale lumber line.

Mr. Bartram is one of the men in the business to-day, who has followed the log through all operations to the finished product. His first acquaintance with the trade was in 1887, when he was employed by the Ottawa agency of the Rathbun Lumber Co. He started in the office, and, after some two years, commenced to spend most of his time in lumber yards and around sawmills during the summer, while in the winter he was out in the woods among the jobbers. He neglected

no opportunity to become thoroughly familiar with the most progressive methods, and was given charge of the Gatineau River operations of the Rathbun Company in 1894. He spent several months of the following year in Deseronto in the sash and door factory and the lumber yard of the firm. When the Rideau Lumber Co. was formed in 1896 he resigned from the Rathbun Co. to take charge of the river operations for the former. He also supervised manufacturing the logs and grading the lumber. During the last quarter of a century Mr. Bartram has been on the road a great deal selling to the trade. He is a shareholder and director of the Rideau Lumber Co. and has always taken a lively interest in the advancement and welfare of the industry. He was one of the enthusiastic members present at the St. John convention last February and took an important part in the deliberations of the C. L. A.

Abitibi Will Have Big Capitalization

A new company, Abitibi, Limited, is to be formed forthwith by the Abitibi Power and Paper Company, Montreal, with a capitalization of \$31,000,000, divided into \$30,000,000 common and \$1,000,000 preferred stock. This new organization is to take over the present Abitibi Power and Paper Company as a going concern, giving the holders of the latter's common stock five shares of common for each share presently held, the preferred shares receiving share for share alike.

There would thus be issued at the outset of the new company's career \$25,000,000 in common and \$1,000,000 in preferred stock, leaving a balance of \$5,000,000 in the treasury for disposal among shareholders at the discretion of the directors.

In addition, holders of Abitibi as of record on January 2, 1920, will receive a dividend of 4½ per cent., bearing the disbursement for the year 1920 up to a full 6 per cent., the initial payment on the junior securities of the company having been declared on September 23 last, and paid on October 1.

President Anson stated that the new capitalization is based on the present value of the Abitibi Company's splendid assets, generally conceded to be among the finest possessed by any of the pulp and paper concerns in Canada.

Annual Dinner of Lumber Concern

The annual staff dinner of Terry & Gordon, Toronto, was held on December 30 at the King Edward Hotel. Business during the past year was reviewed and plans discussed for the coming year. The firm have just closed one of the most successful twelve months in their history and are looking forward to 1920 with confidence and optimism. F. W. Gordon gave an interesting address on the standing timber available in British Columbia and the ratio of the annual cut. Owing to the growing scarcity of certain well known lines of forest products he believed that woods not known now commercially were likely to be experimented with and tried out in the near future. A. E. Cates, manager of the firm presented satisfactory statistics of the business done during 1919. A. S. Nicholson gave an instructive report in which he recounted some of his experiences in the West during the past year. Mr. Nicholson will not return to the Coast but has joined the organization in Toronto in a managerial capacity. All the other members of the staff made short addresses.

Frank W. Gordon left Toronto recently for the West where he

will assume the active management of the Vancouver branch. A. E. Gordon departs shortly for England on a business trip and will look into the export situation.

Among those present at the gathering were H. J. Terry, A. E. Gordon, A. E. Cates, F. W. Gordon, A. S. Nicholson, J. E. Green (transportation manager), L. M. Dougherty, R. A. Watt, L. J. Linton, Clarke Allen, Toronto, J. H. Poulin, Montreal, and W. C. Thuerck, Haileybury.

Will Build 600 Houses in Sarnia

Members of the Sarnia Chamber of Commerce in co-operation with McEachren and Sons' Limited, Toronto, builders, are organizing a syndicate to build about six hundred houses in Sarnia, Ont., to relieve the present housing scarcity. The directors of the Chamber of Commerce have already endorsed the move and members are now busy subscribing the money to put the project over. Work will commence on the houses in the course of a couple of months. Sarnia's rapid growth in the past couple of months has intensified the house shortage, and now the city is losing citizens as a result of the lack of accommodation. City officials reported that under the housing scheme the Sarnia Housing Commission had expended about \$70,000 during the past few months in building twenty-two houses that cost between \$3,000 and \$3,200 each.

Will Erect Big Pulp and Paper Plant

The M. J. O'Brien interests are going ahead seriously with their plans for the installation of a large pulp and paper mill in the vicinity of the Des Quinze water-power, near the north end of Lake Temiskaming. The M. J. O'Brien Corporation has a capitalization of \$20,000,000, and controls not only the Des Quinze water power, of which no less than 100,000 horsepower can be developed, but the O'Brien silver mine at Cobalt and the Miller-Lake O'Brien silver mine at Gowganda. It is now learned that the corporation is investigating the various methods employed in other plants, and is considering the possibility of electrically-heated boilers, etc.; this, presumably, due to the fact that power may be generated at a comparatively low cost owing to the size of the flow to be dealt with.

Playing the Game of Business

By B. C. Forbes

Business is as much a game as golf or baseball or football. Life itself is aptly likened to a game.

To win, to earn and enjoy the fruits of victory, you must play fair.

A cup or medal or other trophy is not the real prize the victor receives; the real prize, the real reward, is the satisfaction derived from superior, worthy achievement.

Wealth is not the real prize of life, it is only a trophy, a symbol, and may carry with it no satisfaction; indeed it does not carry with it genuine, lasting satisfaction unless it has been won fairly, honestly, honorably.

The more I see of rich men and the closer my insight into the workings of their minds and hearts, the more strongly convinced do I become that great wealth is no passport to happiness nor proof of true success.

It is an old truth, but it needs preaching every sunrise, so many do not know it, or, knowing it, do not heed it. If they could only be made to understand, if they could only see things in their true colors, if they could only peer into the hearts of many millionaires, they would order their lives more rationally and enjoy life more thoroughly.

To win out you must play the game every time.

"Look at So-and-So; he has everything he wants, yet everybody knows that he made his money by shady practices," you may reply.

Don't fool yourself that So-and-So has everything he wants. Do you imagine that he doesn't know how you and other people regard him? And do not think for a moment that he enjoys being looked at askance, or that he wouldn't exchange most of his ill-gotten gains to stand high with you and other people—and to stand high with himself.

There have been wholesale efforts to reap more than has been sown, to get more than has been earned, to tilt the scales unduly.

Sooner or later the profiteers and labor slackers will get their just reward.

The call is for the fellows who can be depended upon, under any and all circumstances, to play the game.

Playing the game lasts.

The things that count are the things that last.

On the left is seen the sixteen-months old son of A. Blomberg, Superintendent of the Mainland Cedar Co., Vancouver, who is conducting a miniature log run on the chair. In the centre is a view of the high lead system of logging, so much in evidence in the West, and on the right are several contented "porkers," manufactured from the left-overs in the kitchen of the logging company.

Deputation Urges Bonus for Shipbuilding

Representatives of seventeen shipbuilding companies waited on the Government at Ottawa recently to urge assistance to shipbuilding in Canada. They requested that, for a term of ten years, the Government should grant a bonus of ten dollars per displacement ton and ten dollars per indicated horsepower on steel ships built in Canada and completed after April 1, 1920.

Without this assistance, the delegation claimed, existing plants could not be continuously employed, and the breaking up of the organization would necessarily follow. This, it was added, would throw large numbers of men out of employment, and undo "much of the good which the Government had achieved by means of the encouragement given to the shipbuilding industry and in the employment of returned soldiers, and men previously at work on munitions."

Sir George Foster, on behalf of the Government, promised earnest consideration of the request for a bounty. It was agreed that the delegation should appoint a committee to confer further with members of the Cabinet.

Big Shipbuilding Plant Resumes

Work has been resumed full blast at the shipyards of the Davie Shipbuilding Company at Lauzon, Que. Fifteen hundred men were employed there before closing, and now one thousand have been taken on. The balance of the men will gradually be taken back as operations are resumed.

There have been no changes in the management of the plant, the Canada Steamship Lines not having taken over the plant, as had been rumored.

Boom and Slide Companies' Annuals

The annual meetings of the Sable & Spanish River Boom & Slide Co. and the Mississauga River Improvement Co. will be held at the Queen's Hotel, Toronto, on Thursday, January 22nd. The annual gatherings of the French River Boom Co. and the Log Picking Association which operates on Georgian Bay, will be held at the same place on Friday, January 23. Officers for the coming year will be elected, reports presented and other business given attention.

Trying to Revive Wooden Shipbuilding

A recent despatch from Victoria, B. C., says:—Another company is in course of formation in Victoria to build and operate wooden schooners. The new organization, which has been under contemplation for some time, is headed by Harry Barnett, a well known local man with considerable practical shipbuilding experience, and proposes to avail himself of the federal government loan plan. Mr. Barnett, who has strong financial backing of local capitalists, proposes to float a shipbuilding and operating company at a capital of \$300,000.

The venture will be on co-operative lines and it is understood that a large percentage of labor is considering the investment of money in the new concern. It is proposed to build six 2000-ton, five-masted, topsail schooners.

Price Bros. Will Resist Order

"We will resist to the utmost of our power so that our own, as well as the industrial and commercial liberties of others, may be protected against exactions and arbitrariness," said Sir William Price, of Quebec, with regard to the order of Newsprint Commissioner Pringle restricting newsprint shipments to the United States. "We base our refusal," declared Sir William, "on the total absence of jurisdiction in the Ottawa authorities and the paper controller, in the premises, and we will seek by all legal means at our disposal, to resist the carrying out of the orders given."

A Definite Selling Plan and Why

Have you a definite selling plan or are you simply sitting in the office, waiting for the guy with the lumber bill and the wagon to show up and take some of your stock away from you?

Don't you think you could profit by mapping out and then carrying through a selling campaign for your goods and your materials, and for the things that your goods and your materials could be constructed into for the benefit of the other fellow, for every season of the year?

Have you made this preparation for this fall?

Are you going to, for the coming winter?

Folks need seasonable buildings like they do seasonable clothing, you know.

Are you sending out to your trade pulling letters, asking them to drop into your office, and telling them some of the things you have for sale?

Are you dropping into their homes, to tell them those things?

Are you re-arranging or re-fitting that office of yours to make it a place where you will be proud to have people come to discuss building plans?

Are you building confidence and goodwill among your trade by the service you are offering—and giving?

Are you wishing for good business?

Or are you hustling to create good business?

Your answer classifies you.—The Lumber Co.-operator.

New Wholesale Lumber Firm in Hamilton

The firm of McCormack & Stewart have opened an office in the Bank of Toronto Building, Hamilton, where they will conduct a general wholesale lumber business, specializing in white and red pine, hemlock, spruce and British Columbia fir and cedar. The members of the new organization, James L. McCormack of Echo Place, Ont., and R. R. Stewart of Hamilton, are both favorably known to the lumber trade in Western Ontario. Each has had several years' experience on the road and an intimate insight into the business.

Mr. McCormack began his career in the employ of Mickle, Dymment & Son, at their Brantford retail yard, in 1900. He went in 1913 with the Canada Pine Lumber Co. of Hamilton and Kearney, as

Jas. L. McCormack, Hamilton, Ont.

R. R. Stewart, Hamilton, Ont.

salesman. He was with them for three years and since that time has been with Campbell, Welsh & Paynes of Toronto, proving himself an able and aggressive representative. Mr. McCormack has made many friends in the trade and carries with him in his new sphere of activity their heartiest well wishes.

R. R. Stewart has been identified with the lumber industry for the last fifteen years. His first position was with the Independent Lumber Co., Moose Jaw, Sask., with whom he stayed one year. He then went to their sawmill in British Columbia where he remained until the end of 1906 and then journeyed back to the East. His next post was with the Consumers' Lumber Co. at Hamilton, which is the retail department of the Long Lumber Co. He managed this yard for two years and joined the wholesale staff of the Long Lumber Co. as their travelling representative throughout Western Ontario. He was in their service until the spring of 1916 when he became associated with Muir & Kirkpatrick, of Toronto. He has sold for this widely-known firm not only in Ontario but in the United States, and has also bought lumber for them and looked after their stocks in New Brunswick, Quebec and Ontario. Mr. Stewart is one of the best liked lumber salesmen on the road and is well spoken of by all his customers.

Part of the 1919 cut of Manufacturers Lumber Co.'s mill at Shakespeare, Ont.

Busy Many Heads Lumbermen's Committee

Sir William Price, who is chairman of the local committee of arrangements in connection with the forthcoming Canadian Lumbermen's Association gathering in Quebec City, has for many years been a leading factor in the industrial activities of the sister province of Quebec. He is a busy man but manages to take a broad and sympathetic interest in many movements of importance and public benefit. Sir William is president of Price Bros. Limited, and honorary Chairman of the Union Bank of Canada, as well as president of A. Gravel Co., Limited, and the Metis Lumber Co. and a director of the Wayagamack Pulp & Paper Co., as well as the Canadian Export Paper Co. After completing his education in Lennoxville, Que., and in England, he entered Price Bros. in 1886. Sir William was a member for Quebec West in the federal parliament from 1908 to 1912. As Lieut.-Colonel of the 171st Battalion, he went overseas in 1916, and after the corps was disbanded in England, he crossed to France as captain of the 4th Battalion, Canadian Railway Troops, and returned to Canada in 1917.

Sir William is a member of several leading clubs and has always manifested deep concern in the development and extension of Quebec Province and the great pulp, paper and lumber industry of which he is at the head. His company will within the next year have the largest newsprint paper mill in the world at the new town of Saguenay.

Sir William resides at 145 Grand Allee, Que., and his chief recreations are fishing and shooting—that is when his varied interests permit him to enjoy a real holiday.

Advantage of the Planted Forest

"There is a great advantage in planted forests over natural forests," says James S. Whipple, former State Forester of New York State. "Density of forest growth is all important. That can be obtained in uniformity only by planting. Unless the growth is dense, close together, the trees will not do well. A tree standing alone grows to limb, is short and produces little or no lumber of value. If close together, trees grow tall, have few limbs and one tree will make several saw logs and produce much clear stuff lumber.

"A natural forest in the Adirondacks," he continues, "may produce if good, eight thousand board feet of lumber to the acre, sometimes more, sometimes less. A planted forest of pine, when mature, will produce from 50 to 80 thousand board feet of lumber on an acre. Therefore, we must plant forests."

New Regulations for Cutting Wood

The Department of Lands and Forests for the Province of Ontario, with respect to applications for permits in general, has announced that no permits will be issued to parties desiring to cut for commercial purposes.

Applications from municipal authorities as, in the past season to cut wood for the use of their citizens will be received and permits granted for the areas which are known to be suitable.

Individual applications for small quantities of wood, for fuel purposes, for their own use, will also receive consideration. Where a settler is in need of material for building purposes and has none upon his own lot, the department may consider granting a permit for a limited quantity to meet his actual needs. No other applications, however, except in such cases as has been cited will be entertained.

Pledge of the Merry-Go-Rounds

To Promote Happiness, Efficiency and Civic Welfare,
I sincerely promise that wherever I am

I will talk HEALTH instead of sickness.
I will talk PROSPERITY instead of failure.
I will talk GOOD NEWS instead of bad news
I will tell the CHEERFUL tale instead of the sad tale.
I will mention MY BLESSINGS instead of my burdens.
I will speak of the SUNSHINE of yesterday and to-morrow
instead of the clouds of to-day.
I will ENCOURAGE instead of criticise.
I will be a FRIEND to everyone.

Signature.....

"A merry heart doeth good like a medicine."

The Port of Quebec

(continued from page 41)

Dryer, a "Richardson" Separator and a Bagging Shed. Also special facilities for bunkering vessels, and railway connection with all railways.

The Port of Quebec possesses: two Graving Docks, one 600 feet long by 62 feet wide at entrance; one (new) 1,150 feet long by 120 feet wide at entrance, capable of taking the largest vessels, with repair shops in connection, capable of executing all required reparations.

The Port of Quebec is the only port on the St. Lawrence which can accommodate during eight months, vessels of a large draught, and it can compete with any of the great American ports.

The shipments of lumber, timber and spoolwood from the Port of Quebec during the season of 1910 were as follows:

61,872,743 ft. B. M. Lumber.

15,253,189 ft. B. M. Timber.

3,965,753 ft. B. M. Spoolwood.

1,365 tons Pulp.

Jottings in the Coming Convention

Members are requested to bring their wives, sisters or sweet-hearts to Quebec. The local committee has arranged a fine programme for the entertainment of all the ladies.

The local Quebec Committee has the Price and Owen the city. If you do not believe it ask the Chairman or the Secretary. It is also in the Power of the Lumbermen's Association to do much for it has Bigwood—even if stocks are low.

Regarding accommodation in Quebec City, the manager of the Chateau Frontenac has arranged to take care of all, but it is most important that reservations be made as early as possible.

It looks as if all visitors from Ontario and the West will have to be vaccinated before going to Quebec as a recent despatch from Ottawa says: Dr. Hector Palardy, of Montreal, district health officer for the eighth Quebec sanitary district, announced that the quarantine declared by Montreal against the province of Ontario has been extended to the whole of Quebec, and until this ban is lifted any resident of Ontario or visitor to this province who wishes to visit any point in Quebec must carry and present for inspection a certificate showing a successful vaccination within seven years. Without it they will not be admitted.

Lumber Trade News in Short Shape

La Compagnie d'Assainissement de Courville, Limitee, have been granted a charter with a capital stock of \$20,000, and head office in Amos, Que., to purchase, make, sell and deal in timber limits and licenses, real estate, water powers, etc. The incorporators of the company are: B. Desrochers, of Ville Marie, Edward Gray, Julien Beaudry, Dr. G. Bigue and Dr. J. A. Bigue.

The building of the lumber manufacturing and dry kiln plant adjacent to the drydock site at Prince Rupert has now reached a point that will enable operations to start within a few weeks. Approximately \$86,000 has been expended on the plant to date, and the total outlay will amount to \$150,000 when completed. Major Cowper-Young, formerly associated with the Imperial Munitions Board, is head of the new enterprise.

James McKechnie, of Red Deer, Alta., expects great activity in the lumber woods west of Rocky Mountain House this winter. Owing to the running over of the timber limits by fire, the wood has to be cut. The lumbermen are finding help more plentiful than last winter, and need all they can get. The Phoenix Lumber Co. (T. A. Burrows) have opened out offices at Rocky Mountain House and at Red Deer.

Lumbermen in Recent Municipal Elections

Lieut. Col. F. J. Carew, Lindsay, Ont.
One of newly-elected Aldermen in that town who makes his first municipal bow.

J. A. Laberge, Sudbury, Ont.
Youngest man ever elected Mayor of this progressive town, being only 27 years old.

R. E. Butler, Woodstock, Ont.
Who was re-elected Water and Light Commissioner, having served many years.

W. R. Beatty, Pembroke, Ont.
Who has retired after two years splendid service in the civic chair.

A. L. Mattes, who for 14 years has been general manager of the Prince Albert Lumber Company, Prince Albert, has been named as secretary and general manager of The Pas Lumber Co., Ltd., a new organization, having behind it the directors of the Prince Albert Company, and which has purchased the timber limits and sawmill of the Finger Lumber Company at The Pas. The sawmill will be greatly enlarged and a big cut of logs will be taken out this winter, from one thousand men being required. Both day and night shifts will be employed at the mill next summer.

Francis A. Williams arrived at Baynes Lake, B.C., recently, to become secretary of the industrial Y.M.C.A., which has been instituted among the camps of the Adolph Lumber Co. at Baynes Lake, the Baker Lumber Co. and the Ross-Saskatoon Lumber Co. at Waldo. These three companies, as a result of the demonstration of Y.M.C.A. work put on by Captain Rae among five lumber camps of the East Kootenay, have decided to have a permanent Y.M.C.A. secretary among them. Mr. Williams will devote his time to the camps of the three companies.

On the left is a spar tree 200 ft. long, waiting to be raised, and in the centre is part of the railway of the Mainland Cedar Co. of Vancouver, winding its way up the mountain side. On the right is part of the company's camp at Port Neville, B. C., showing some of the bunk-houses and the mess-house.

**Sale of Timber**

Tenders will be received by the undersigned up to and including Monday, February 2nd, 1920, for the right to cut the timber on the Township of Hele, situate west of the Township of Nipigon in the District of Thunder Bay, containing an area of 43 square miles more or less.

Tenderers will state: (1) the amount they are prepared to pay for Pine and other timber respectively, in addition to Crown dues of \$2.00 per M. ft. B.M.; (2) the amount per tie in addition to Crown dues of 5 cents each, for such timber as may be suitable for making railway ties; (3) the rate per cord for Spruce Pulpwood in addition to the Crown dues of 40 cents per cord; (4) the rate for Balsam and other wood suitable for pulpwood in addition to Crown dues of 20 cents per cord; (5) the rate per post for Cedar posts in addition to Crown dues of 1 cent each; (6) the rate per pole for Cedar posts, if any, in addition to the following rates of dues, namely: (a) Poles 30 ft. and less in length, 15c each. (b) Poles 31 ft. to 40 ft. in length, 25c each. (c) Poles 41 ft. to 50 ft. in length, 50c each. (d) Poles 51 ft. and over in length, \$1 each. 1. Any Pine timber on the berths which the successful tenderer may cut into square or waney board timber, shall be subject to a flat rate of \$200.00 per M. feet cubic. 2. The rate of bonus to be offered on Pine sawlogs shall be uniform for all classes of Pine. 3. Licenses to be annually renewable for five years or until the 30th of April, 1925, after which no further renewals will be given and the territory shall revert to the Crown. 4. An annual ground rent of \$5.00 per square mile, and an annual fire protection charge of \$6.40 per square mile to be paid and license issued upon payment of these charges for the current season. No cutting to be done until license issues. Parties making tender are to accompany their tender with a marked cheque for \$20,000.00 to be held as deposit, cheques to be made payable to the order of the Provincial Treasurer. The Department does not bind itself to accept the highest or any tender. Tenders to be enclosed in sealed envelopes marked "Tenders for Timber Berth," and to be addressed by registered letter to the Minister of Lands, Forests and Mines, Toronto. Maps showing the berth offered for sale may be obtained upon application to the undersigned or from Mr. J. A. Oliver, Crown Timber Agent, Port Arthur.

BENIAH BOWMAN,
Minister of Lands, Forests and Mines.
Toronto, Dec. 22nd, 1919. 2-3

The following limits are offered for sale. Cruiser's Reports and blueprints where available will be sent to Principals or their accredited Agents:—

British Columbia, Prince Rupert District:—

160 acres freehold within ¼ mile of Skeena City on the Grand Trunk Pacific Ry. Estimated stand 5,000,000 bd. ft. within a few miles of Prince Rupert.

British Columbia R. R. Belt:—

Estimated stand approximately 300 million bd. ft. Capacity of mill 60,000 bd. ft. per day. The plant is on the main line of the C. P. R. and logs can be driven into the millpond at a minimum cost.

Quebec, Bonaventure County:

A Crownland limit of 4 sq. miles, estimated at 20,000 cords of Spruce and Fir is offered for sale. This limit is on Metapedia waters with a driving distance into the Metapedia, just above the Metapedia boom, of about 25 miles. The limit is about 14 miles from a station on the Intercolonial Ry. and the settlement extends back to within 3 or 4 miles of the northern boundary. Logs can be landed on a drivable stream for \$10.00 per M. bd. ft. and can be driven into the Metapedia boom for about \$2.00 per M. There should be a minimum profit in operating this tract of \$40,000.

BRADLEY & AVERY,
Timberland Factors & Cruisers,
4 Hospital Street,
Montreal, P.Q.

TIMBER LIMITS

We have some very attractive offerings in Standing Timber, Cedar or Spruce, in Alberta and B. C., with or without sawmills. Lougheed & Taylor, Ltd., Calgary, Alberta. 24-3

Wanted

MAN RESIDING IN TORONTO, who has had experience in the manufacture of Sash and Doors, etc. Applicant must have best of references, and willing to invest \$5,000.00 in the business, which has been established for 12 years, and doing a good shipping business to Toronto and elsewhere. Applicant must agree to do the selling and collecting for the city of Toronto. Write Box 95, Canada Lumberman, Toronto. 1-2

A Real Bargain!

The Timber and Logging Outfit of a going concern can be had at a bargain—to close up a partnership deal where division is impossible.

There are some 125,000,000 feet of hardwood timber, of which 40% is extra fine quality birch; 25% maple; balance—spruce, cedar and pine.

Location is within 30 minutes by automobile from Sault Ste. Marie, with rail and water shipping facilities.

This is a real bargain. Address—

JOHN C. SPRY,
1003 Harris Trust Bldg.,
Chicago, Ill. 1-2

For Sale

Sash and Door Factory and Planing Mill, located in one of the busiest and best towns in eastern Ontario. Correspondence solicited. Box 66, Canada Lumberman, Toronto. 23-t.f.

Unusual Opportunity

For Sale Cheap—Water power in the Village of Kagawong, summer resort, surveyed by New York engineers and later by Detroit Engineers and the Hydro people, certified by the Robt. W. Hunt & Co., of Chicago, estimated 2,000 H.P.

An excellent opportunity for a cement proposition. There is an unlimited quantity of cement rock adjacent to power and some 120 ft. above level of bay there is ample room for plant and docks, together with 20 rods of water frontage.

Also the greater part of the Village of Kagawong with most of the adjoining lands, lumber, shingle and planing mill. Heavy American Standard Oil drilling outfit, store, farm and other buildings, 400 acres of sheep ranch, about 1500 acres of timber lands with natural gas for heating and lighting in logging camps. Other timber handy to purchase, also 610 acres in the vicinity of Gore Bay.

Object for selling, advanced in years.

JAMES CARTER,
Kagawong, Manitoulin Island.

**SALE OF RED
AND WHITE PINE TIMBER**

Tenders will be received up to and including Thursday, the 29th of January, 1920, for the right to cut the Red and White Pine timber on certain lots in the Township of Notman in the District of Nipissing. Tenderers will state (1) the amount they are prepared to pay per M. ft. B.M. in addition to the Crown dues of \$2.00 per M. ft. B.M.; (2) the amount per tie in addition to the Crown dues of 5c each for such of the Pine timber as may be suitable for making railway ties; (3) a flat rate of \$200.00 per M. ft. cubic for waney board timber. The rate of bonus on Pine sawlogs shall be uniform for all classes of Pine. Licenses renewable for two years or until the 30th April, 1922. Full particulars as to the exact area, maps, etc., may be obtained upon application to the undersigned or from Mr. J. T. McDougall, Crown Timber Agent, North Bay.

BENIAH BOWMAN,
Minister of Lands, Forests and Mines.
Toronto, Jan. 2nd, 1920.

N.B.—No unauthorized publication of this notice will be paid for.

Review of Current Trade Conditions

Ontario and the East

The firm situation, which characterizes all branches of the lumber industry, still prevails, and wherever members of the trade meet, the outlook for the present year is carefully canvassed. The feeling is general that business is going to be remarkably good and everything pertaining to it shows justification for this confidence. Building prospects are looming up splendidly. All woodworking plants are busy, the need of houses is great, foreign trade should expand, and barring the absence of any further sharp demands from labor or labor disturbances, the future should be bright; in fact retail lumbermen, who have been busy taking an inventory of their stocks, find that in many instances supplies are very low. They all look upon 1920 as the banner year and also realize that prices will not go lower at present owing to labor and general production costs.

There is not much change in regard to the B. C. forest products situation in the East. Most of the mills are not yet able to supply any demand in Ontario and the other provinces by reason of having been shut down on account of the late cold snap at the Coast, and also of the annual stock-taking and repairs to plants. One company is selling some rough clears and the other companies represented in Toronto and Montreal expect to be in a position to quote on yard stock and finish by the end of January.

The number of inquiries for timbers has of late increased very much, while quite a few letters have been received in regard to flooring, ceiling, beveled siding and cedar boards. As soon as the mills are in shape to supply some of the Eastern demands, business in Coast and Mountain products will pick up immeasurably in spite of the constantly stiffening prices and delayed deliveries.

A few companies have available carloads of shingles and the price remains about the same, with a slightly upper tendency.

In the meantime there is everything betokening that lumber prices will go higher before they decline. The observation is made

owing to the increasing scarcity of stock, the ready demand and the insistent calls from many sources. Wholesalers are now looking around as to where they will be able to corral stocks for the future, and recently a large number of new organizations have entered the field which makes competition all the keener. Some firms are not booking orders just now except in isolated cases so that they may catch up with shipments which are away behind.

All mills have less lumber piled in their yards at this season than they have ever had for January. Flour now costs, delivered at the camps, fifteen dollars a barrel, an advance of three dollars; oats a few days ago were selling at \$1.15 to \$1.20 per bushel on a rising market and hay is now costing loggers from \$35 to \$40 per ton by the time it reaches the camp. In Ontario and Quebec all other supplies are stiffening the while. This tends to add to the cost of lumber production, not to speak of other factors which enter into the determination of price.

Great Britain

Shippers' quotations for Canadian yellow pine have advanced but stocks are now fairly considerable, although a large demand that will probably tax them seriously is anticipated in the New Year.

Values of Quebec birch lumber are firm; Halifax and St. John's planks are rather scarce, and, from all accounts, c.i.f. values are practically certain to move upwards in the near future.

The difference between the position in Great Britain and that on the Continent becomes more and more marked; in fact, many English firms quite despair of solving the difficult question of future prices. That there is a boom in Swedish wood just now is certain, and that prices are rising to what seem absurd heights is also very clear; but, on the other hand, how English firms can possibly pay the current asking figures and make a profit is at present a mystery. As, however, has so often occurred in former years, the French, Belgian, Dutch, Spanish, and to some extent the German buyers

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. BOLE, Pres. F. H. GOFF, Vice-Pres. E. C. BARRE, Gen. Mgr. W. A. SAURWEIN, Ass't. Mgr.

have set the pace, and England, after vainly trying to stem the tide of rising values, has had to fall in with the general trend of other markets. In pre-war days, however, a rise of ten or twenty shillings per standard was considered a great thing, whereas now merchants are faced with advances running into many pounds per standard. Although it is difficult to discover what moderating influences can work on the Swedish market next year, no one could advise British merchants to take such a tremendous risk as would be involved in paying the free-on-board figures now demanded.

United States

The lumber trade of the United States is faced at the outset of 1920 with conditions that have never been encountered previously. The prospective demand is exceptionally heavy, stocks are unusually low and prices are advancing all the while. One of the most serious problems to be overcome is that of transportation, in the matter of filling current and future orders. There is considerable winter building, especially in the cities, and the house shortage is still acute in numerous centres. While there is some complaint heard with respect to high costs, this has not proven a deterrent in the matter of new structural undertakings. As fast as they can secure material contractors are going on with new work. What about prices, is the cry now and then heard, and one authority sums up the situation by stating that while possibly the price level for the present may not hold for the whole year, it will not come down until there is increased efficiency of labor, an adequate supply of workmen and an improved service by the transportation lines of the country.

In the hardwood field the stocks are the lowest in the history of the industry. Prices have reached a pinnacle that a year ago would not have been believed possible. Commenting upon this phase of the situation, the "American Lumberman" says:—The lumberman has during the last year been severely criticized from various quarters because of the soaring tendency of his product, no account being taken of the underlying utterly abnormal conditions responsible for the prevailing price situation. In the meanwhile the lumbermen, as eager for a return of more normal conditions as any buyer or consumer, is neglecting no opportunity to increase the output of his logging camps and mills, and is entering 1920 earnestly wishing for relief during the new year from the strain he has been compelled to undergo during the last season, although knowing full well that be-

cause of the fundamental conditions in the hardwood lumber market there can not, at least during the first quarter or perhaps the first half of the year, be any material relief from the present situation. During the last week there has been no abatement in the demand, which comes from practically every hardwood consuming source, with furniture and automobile body manufacturers probably leading the bidding for supplies; nor has there been any noteworthy increase in production, nor consequently in mill stocks. Reports say that many mills are giving particular attention, in anticipation of a heavy house building movement in 1920, of turning out finish. There is a very large demand for this class of material from retailers the country over.

In southern pine there is an improvement in the outlook for export business with South America, the West Indies and Mexico all taking larger quantities. Flooring and finish are most active and mill and yard stocks are both very low, while the car shortage is still acute. In the western section heavy rains continue to fall and several mills have been compelled to shut down which diminishes production. In western woods with more mills forced to suspend operation because of congestion of stock, the Pacific Coast manufacturers and wholesalers are exerting every effort to effect the lifting of the embargo that has virtually stopped shipments from the western territory. The mills are well supplied with orders and have every incentive to push production, but a large percentage of them have limited storage space for their product. Shipping has been impeded by the car shortage for some months past and the plants were ill prepared for the virtual stoppage of shipments caused by the embargo, and even with its modified application the embargo continues the chief issue in the market.

In the present situation, little business has been added to the order files, the uncertainty of the outlook acting as a check on producers and wholesalers alike. Douglas fir prices remain fairly stable and the market retains all of its strength. Increased railroad demand is expected to be a decided factor in maintaining the stiffness of the market. Large inquiries are circulating, and it is anticipated that a large amount of business will be placed in January and February.

The shingle situation shows little change; stocks continue to accumulate at the mills still in operation, and opinion is general that prices will show some decline when cars are again plentiful. At present the tendency is upward. The demand is not heavy, but very few shingles are moving.

Market Correspondence

SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD

Business Good in Montreal With Prices Firm

Conditions in the Montreal lumber market are good, although the local retail trade is rather slow. For this period of the year, business is exceptionally brisk, with prices very firm. As one lumberman put it "There are no prices to-day: the value depends to a large extent upon how badly buyers require stock, and prices have gone almost crazy." While there may be a little exaggeration in this statement, it at any rate indicates the trend of the market. The great difficulty is to obtain stock; white pine is almost unobtainable, while the very small stock of available lath is fetching record prices. The outlook is all in favor of the maintenance of these high values, the general idea being that we shall witness a still further upward movement.

Orders from the States are excellent. Shipments, however, are not being made as promptly as they might be, owing to car shortage.

While there is a fairly good demand for B. C. stock, lumber is by no means plentiful, due to limited cars and to the shutting down of mills over the holiday period. Owing to the unsettled conditions, some firms are unable to make firm quotations.

Hardwoods are not only scarce but very dear. Demand is far better than the supply, in fact it is not possible to secure stock in certain lines.

The sash and door factories and the box makers continue very busy, the former having orders which will ensure work for several months.

The past year was a very good period from the building point of view—the best since the war started. For December the permits totaled \$658,401, bringing the aggregate for the year up to \$10,033,901, a gain of \$5,150,228. No doubt a portion of this was due to the increased cost of constructions, but the figures show that in spite of labor troubles contractors did far better than was at first anticipated. Moreover, all indications point to a more busy season in

1920. The architects and contractors state that a great deal of work is contemplated, and that they are preparing for many large jobs. While building prices are high, and promise to be still higher, the public has apparently settled down to submit to the inevitable.

The British Government is exporting a fair amount of lumber to the United Kingdom from St. John and Halifax. Up to the end of November 177,000 standards were sent from all Eastern ports, this being nearly three quarters of the total amount purchased by the British Government.

There is still a downward tendency in the exports of pulpwood. Those in October totalled \$596,436, a decrease of \$56,148. During the seven months of the fiscal year the total was \$5,686,179, a decrease of \$4,294,356. In October chemical pulp at \$3,965,946 gained \$1,546,159, the latter being due to heavy buying by the United Kingdom, while France also came into the market for the first time since the war. For the seven months, chemical pulp decreased \$843,110, while ground wood advanced \$1,652,779. The exports of paper were again very high.

Ottawa Prices Are Firm and Outlook Promising

Lumber enough for old customers, with little or no outward desire to drum up new business, was the position that the New Year of 1920 found the Ottawa lumber market, on December 31st. Since then prices have remained absolutely firm, orders were fairly plentiful, and stocks are very low.

The opening period of January, coincident with the incoming of the New Year, gave promise of continued strength both as to demand and prices, and the only disturbing feature of the situation was that of the shortage of stocks, of practically all grades.

It developed in more than one case, that present quotations were not cut a fraction, even though large orders could have been secured. In a nutshell the trade seemed just as well satisfied to keep what

lumber it had than take any lower price. Taken all around there were expectations that the present high tide prices will still go higher before the spring months are out.

On the whole the volume of business done was not as heavy as during the month of November, but this had been anticipated owing to the season of the year and the holiday period. As compared with the close of December, in 1918, the volume of business transacted was greater, though stocks were lower. The outlook for coming good business in the Ottawa market was bright, as all indications from the real estate situation indicated that a great building revival will closely held, and the extent of next year's sawmill cut is unknown.

The extent and success of the woods operations of the various companies in the Valley still remain uncertain. On them depend largely what the price of lumber is going to be later in the year. Reports for the first ten days of January were conflicting, in a minority of cases the cut was reported to be going as good as could be expected. In another case, the log output was "behind". How much, nobody ventured to say. The general impression was that the lumbermen were not going to get out all the logs they expected to this winter. Weather conditions, in a sense, hindered bush operations as the light fall of snow in the valley delayed skidding and teaming, though at first hand it helped the felling of trees.

There was little or no activity in the European export situation. Rail transportation to the United States tightened up a little, and cars were not as plentiful as they had been.

Conditions in regard to labor with the woodworking and factory plants showed no change. Such plants expect to do a heavy business during the spring months. Lath and shingle remained practically off the market. Relief of the shortage of these two building staples was not expected until some time around June or July, after the sawmill cut gets under way.

Forsees Big Trade for Canada with Japan

"Wake up, Canadian business men! There are wonderful trade opportunities in Japan awaiting you if you only get busy and go after the business."

This was the stirring message of Sir George Bury, former vice-president of the C. P. R., and now general manager of the Whalen Pulp & Paper Co., Vancouver, on his return from the Orient recently after a six weeks' tour.

"Japan is making wonderful progress," he said. "She is richer than ever before and the whole country is simply humming with activity. Everywhere I went I saw evidences of expansion. In some of the older established industries I saw machinery which came from Great Britain and other parts of Europe, but nearly all the new plant is now being supplied by the United States.

"There is all kinds of business to be had by Canadian firms if they only like to get after it," Sir George continued. "It is just waiting there for them, the same as I found it was available for my company."

Here he explained, in response to a query that he had disposed of all the product of the Whalen interests that could be spared from the extensive markets already established by his company. Japan could take all that could be manufactured. He said that what applied to his business was true of other Canadian commercial lines.

"Canada has a well-organized commercial department in Yokohama, Japan," he went on. "Mr. A. E. Bryan is in charge of the bureau and is doing his best to assist in developing trade. But our business men are not availing themselves to anything like the extent they could of the facilities that are offered.

The opinion of Sir George Bury was asked on the exchange situation. "The best way to bring exchange back to normal," he said, "is to balance the trade preponderance against us in the United States by increasing production to the very utmost, and by reducing our expenditures on imports by buying more at home and spending less abroad."

He asserted that the development of trade with the Orient would exert a most beneficial effect on the exchange discrepancies.

During his time in the Orient Sir George visited all the leading trade centres and made comprehensive enquiries into conditions over the entire country.

The Future of British Oak Discussed

A British Timber Conference called by the English Forestry Association was held recently at the Surveyors' Institution, Westminster, with the object of developing to the fullest extent the use and consumption of native timber, and calling attention to the valuable properties possessed by English oak, beech, elm, and other hardwoods.

Lord Selborne, who presided, said imported timbers had supplanted the British timbers without adequate reason. Many builders

and even some architects never considered the possibilities. He gave instances of the fine qualities of English oak. There had been no organization to sell or supply English elm. The attention of the English timber merchants had never been directed to it. A very large proportion of the timber in this country was in the hands of men who owned from 500 to 2000 acres, and who were absolutely at the mercy of the local timber merchant as to whether he could sell. The timber trade in England was utterly disorganized. It was better in Scotland. The Forestry Association wished to act as a clearing-house for information between buyers and growers. Apart altogether from the interests of the owners of these trees, it was incumbent on all to remember that every single pound saved to the nation in produce grown at home was an additional brick in the re-establishment of the foundations of national financial stability.

Major Courthope, M.P., said that by producing ash for pick handles sent to South Wales a short time before the war he had raised the value of his coppices from £3 to £37 at pre-war rates.

Mr. J. C. Calder, Controller of Timber, said the general body of landowners in building did not specify the use of home-grown timber. The great difficulty in the past had been marketing. Everything was wanted nowadays in a hurry, and they must ask the large merchants to stock English timbers in the same way as foreign timbers. Why should not there be sufficient stocks of graded English oak? There was room for both home and foreign trades. Unless competent committees were formed between the association and the trade the chance of home-grown timber was very remote.

Lord Lovat, chairman of the Forest Authority, appealed to all interests to encourage native timber supplies on account of the effect on forestry. Such timber had a bad as well as a good name owing to the timber being badly converted and used for unsuitable purposes.

It was resolved to form a joint committee of the timber trade and the Forestry Association.

Replying to a vote of thanks, Lord Selborne read a letter from Mr. Mallinson, of Mallinson and Son, stating that with the high prices ruling for Austrian and Russian wood there was no question about the British oak coming into its own. He knew of a ship-builder who paid twice as much for Austrian oak rather than use British, the only reason, he believed, being prejudice on the part of the firm because the job of cutting out was easier. That, said Lord Selborne, was the kind of thing they hoped to remove, but also indicated the difficulty they had to meet.

Status of Uncle Sam's Timber Resources

"The country is drawing upon its forest capital at the rate of 60 to 70 billion feet annually," writes H. S. Betts, of the U. S. Forest Service, in discussing the timber resources of the United States. "Long before the present enormous forest resources are eaten up, however," he adds, "it is more than probable that readjusting economic conditions, particularly higher values for timber and a lower per capita consumption, will reduce the annual drain to an amount not more than the annual growth. With its enormous areas of non-agricultural lands—apparently best suited to the production of timber—it is probable that the United States will not only supply its own needs, but continue to be a large exporter of timber. For the next thirty or forty years, at least, there is no question as to the ability of the United States to furnish high grade structural timber and lumber from its southern and western forests to meet almost any demand for such material from any portion of the world."

A careful estimate of the timber stand gives 2,826,000,000,000 feet as the total present amount of standing timber suitable for the manufacture of lumber. The original stand has been estimated at five trillion, two hundred billion feet; of the difference about one-third has been destroyed by forest fires, one-third lumbered and one-third wasted.

Since 1885, the lumber cut of the country has been decreasing from nearly 45 billion feet in 1909 to about 32 billion feet in 1918, and it is estimated that the 1919 cut will be no larger; in fact, production throughout the year has been running considerably below normal, even in the most favorable season.

A national forest policy which shall concern itself largely with conservation, particularly from fire losses, and with a scientific method of public reforestation is urgently needed, but the belief that timber is scarce and that there is not a sufficient supply for building and other purposes is erroneous. Some stocks are low, it is true, and production during the year has been held down by high operating and labor costs and in some sections, by unfavorable weather, but the timber supply of the country is far from exhausted and there is no reason on this ground for advocating the use of substitutes.

Manufacturing All Kinds of Special Shapes in Refractories

Remember, we are making all our own blocks and making a specialty of special shapes.

We are using a high grade fire clay, which is the factor of supreme importance in all processes of manufacture. Our burners are experts. When you are in the market be sure and write us as we know you will find our proposition interesting.

Our stoker arches are designed to promote combustion and give longer life.

Our door arches and jambs are made to withstand the

strong-armed boy with the slice bar.

Our side wall blocks are made to eliminate the many joints that clinkers stick to, when ordinary fire brick is used. They give longer life and reduce air leaks to a minimum.

We designed these arches and blocks so that any handy man could replace same in half the time that it takes to repair a standard fire brick job.

Remember, Gates' blocks means cutting your cost of up-keep and fuel bills.

High Temperature Fire Clay for Emergency Repairs.

We specialize in all kinds of POWER PLANT BRICK WORK

The services of our engineers are offered to you without obligation at any time.

EDGINGS

Ontario

The Dominion Lumber & Coal Co., 265 King St. E., Hamilton, have awarded the contract for the erection of new offices on Rossland St. North, near Barton.

The McAuliffe Davis Lumber Co., of Ottawa, have sent out an imposing calendar to their friends and patrons, showing a delightful bit of mountain scenery and shore.

Hart & McDonagh, of Toronto, sent out a bright calendar showing a northern hunter taking an early morning shot at a fine deer swimming across a bay. The scene is entitled "A fifty-fifty chance."

The Fesserton Timber Co., of Toronto, have sent out to the trade a large and very useful calendar for office purposes. The figure work is particularly distinct, being on a light grey background.

Ferguson & McDonnell, Ltd., Cutler, Ont., have been incorporated with a capital of \$20,000, to acquire timber limits and timber licenses, and to manufacture and deal in lumber, logs, lath, shingles and wood products.

Fire recently destroyed the planing mill of the McKinney Lumber Co. of Woodstock, Ont. The blaze is supposed to have started by sparks from the boiler room. The loss to the firm is about \$25,000, which is partially covered by insurance.

George Gordon & Co., of Cache Bay, have remembered their many friends in the lumber trade with one of their large and picturesque calendars for 1920. The calendar presents a delightful picture of mountain and lake scenery, artistically colored.

Chas. Stewart, of Ashfield township, who has been operating a sawmill for the past year, was in Goderich recently and sold to the Goderich Planing Mills the entire cut of lumber, approximately 100,000 feet, consisting of No. 1 maple, birch, soft and rock elm, ash and basswood.

The Commercial Lumber Co., Ltd., Toronto, Ont., with a capital of \$40,000, has been incorporated to carry on a lumbering business in all its branches, and to manufacture and deal in logs, timber and all forms of wood products. Wm. Bain and John Henry are two of the incorporators.

A provincial charter has been granted to the Coulter Wood Products Ltd., with capital stock of \$50,000 and head office in Hamilton, to manufacture, buy, sell and deal in timber, lumber and wood of all kinds. The new company will take over as a going concern the business carried on by W. P. Coulter.

The Conger Lumber Co. of Parry Sound, Ont., are installing a 48 in. new Champion edger with cluster, having three stationary and one moveable saw. The edger is being supplied by the Waterous Engine Works Co., Brantford, who are also furnishing the Conger Lumber Co. with a strip machine.

St. Thomas Boxes Ltd. has been granted a charter with a capital stock of \$20,000 and head office in St. Thomas. The company is empowered to manufacture, sell and deal in paper, cardboard and other boxes, and to carry on a general manufacturing business. Among the incorporators of the new company are A. E. Ponsford and Peter H. Kolb.

C. J. Thornton, ex-M.P., is erecting a sawmill at Orono, Ont., mainly for doing custom work for the farmers. He states there is a considerable quantity of timber, very much of it second growth, in that section, which is suitable for lumber, and there is no mill convenient to get it out. Mr. Thornton is therefore supplying the need. The mill will be driven by a 20 H.P. electric motor and will have a capacity of 5,000 ft. a day.

George A. Christopher, a pioneer resident of Ingersoll, Ont., died recently in his 88th year. At an early age he joined with his two brothers, the late John and Aaron Christopher, in the contracting business, in connection with which they for many years conducted a planing mill. Their lumber yard and mill were located on the present site of the large factories of the John Morrow Screw & Nut Co., and they experienced a rapid development.

The Dominion Lumber & Building Co., of Orillia, Ont., have recently erected a new plant which is fully equipped to take care of the dressing of lumber in transit, re-sawing, the manufacture of sash and doors and house trim of all kinds, as well as the production of hardwood flooring. Their business consists of wholesale and retail lumber, lath and shingles. J. J. Wilson, of Orillia, is the business manager, and the company report the outlook for the coming season as being particularly good.

Eastern Canada

The McNeil Lumber Co., Ltd., were recently registered in Montreal.

The sawmill of F. S. McDonald, Souris, P.E.I., was recently damaged by fire.

The partnership known as the Minerve Lumber & Power Regd., Montreal, P.Q., have recently dissolved.

A Quebec despatch states that a large sawmill, owned by Leclerc and Belanger, at Lotbiniere, has been totally destroyed by fire with a large quantity of lumber.

Christopher Murray, of Dumfries, N.B., recently disposed of the standing timber on his farm at that place at a price in the vicinity of twenty thousand dollars. This is said to be a record for lumber grown on a farm in York County.

The Wilson Box Co. of St. John, N.B., have remembered their friends in the trade with an artistic and lifelike calendar, entitled "Bred in Old Kentucky," showing a pretty and clever horsewoman standing at the head of her favorite equine. The illustration is from an original painting by Benjamin Lichtman.

W. J. Glen, manager of the Fraser Companies Limited, Fredericton, re-

ceived a painful injury recently in the mill yard while supervising the loading of railway cars. The cars, after being loaded, were moved along a siding with horses, by means of a steel cable and a block. In some manner Mr. Glen became entangled in the cable and was dragged a considerable distance. He received painful bruises about the leg and arm.

The Eagle Lumber Co., Ltd., of Montreal, have sent out one of the finest 1920 calendars. The scenic adornment is pretty and restful. It is entitled "Paradise Island," and reveals a moonlight scene with camp fires blazing and other appropriate settings.

The Tarrien Lumber Co., Quebec, P.Q., has been incorporated with a capital of \$199,000, to manufacture, import, export and deal in lumber, timber, pulpwood and all products and by-products of same. Dr. M. J. Mooney and F. Byrne are two of the incorporators.

The Saguenay Lumber Company, with a capital of \$100,000, has been incorporated by letters patent issued to Henry E. Price, A. J. Price, G. H. Thompson, J. H. Price and L. DeG. Belley. They will operate in the counties of Chicoutimi, Saguenay, and Lake St. John, province of Quebec.

The Campbell-McLaurin Lumber Co. of Montreal, remembered their friends in the trade by one of their usually inviting and imposing calendars. The scene is a pretty bit of nature just after a heavy rain fall, and is entitled "When the Storm Clouds Break and the Sun Shines Through."

A charter has been granted to W. F. Vilas Company, with headquarters in Cowansville and a capital stock of \$500,000, to manufacture, sell and deal in lumber and woods of all kinds, operate and maintain sawmills, planing mills, etc. Among the incorporators of the company is Harold F. Vilas, of Cowansville.

A large new mill to grind pulp may be erected in Sherbrooke, Que., by B. C. Howard. He has requested exemption from taxation and a special rate for surplus power which he would purchase from the city from its present unused supply. The company, which is to be known as the Howard Pulp & Paper Co., is capitalized at \$1,500,000. The piece of land on which the plant is to be erected is about 9½ acres in area and is situated on the bank of the St. Frances River with accessibility for tracks in any one of the four railways which pass through Sherbrooke.

The Martinon Lumber Co., Ltd., of Bangor, Maine, are getting out in their operations at Rocky Gulch, N.B., 7,000,000 ft. of spruce, fir, pine and hardwood logs, about 1,000,000 ft. of which will be excellent pine and probably 500,000 ft. hardwood, while the balance will be spruce and fir. The spruce and fir will mostly go in 2 in. random stock for the American market. The Martinon Lumber Company are at present employing about 200 men, and their operations are going along so well as can be expected under the difficult conditions existing. The company became interested some time ago in the Louis Cabot timberland property on Grand River, Gaspé County, Que., where they may erect a double band sawmill to cut 75,000 ft. or more per day, if prospects develop favorably, but just now they do not consider that conditions warrant undertaking any new developments.

Western Canada

All the sawmills of Vancouver and New Westminster, which were closed down recently on account of the cold snap, have resumed operations.

A new sawmill will shortly be operated near Ruskin, B.C. The lumber will be hauled to Haney for shipment by means of a three-ton motor truck and trailer.

Mr. W. L. Johnson, superintendent of the Brunette sawmills, who progressed favorably after undergoing an operation for appendicitis, has resumed his former duties.

The Beaver Lumber (Northern) Limited, Winnipeg, Man., have been incorporated to manufacture and deal in timber, lumber and wood products of all kinds. Capital \$200,000.

The Pioneer Lumber Co. has been formed, with headquarters at Smithers, B.C., and will establish a sawmill. The mill will be located about half a mile east of Hubert and is expected to be in operation by the end of February.

The Pas Lumber Co., Ltd., Winnipeg, Man., have been incorporated to manufacture and deal in timber, lumber and all forms of wood products; capital \$1,000,000. J. A. McVicar and S. F. Moffat, of Winnipeg, are among the incorporators.

A charter has been granted to the Victoria Land & Timber Co. of Victoria, capital \$20,000; the Charter Lumber Co., Ltd., Victoria, capital \$20,000; the Fletcher & Richards Lumber Co., Ltd., Courtney, capital \$24,000; White Spruce Lumber Co., Ltd., Fernie, capital \$100,000.

The formation of a co-operative shipbuilding company in Victoria, B.C., backed by local capitalists, is contemplated. It is proposed to build six 2,000 ton, five-masted wooden schooners. It is stated that labor will become largely interested in the organization and that advantage of the Federal Government loan plan will be taken.

Fifteen deep-water ships were loaded in November with British Columbia lumber at the order of the Associated Timber Exporters, an organization formed some months ago to handle an order of 70,000,000 feet of lumber for the British Government. Fifty million feet of the order have already been shipped to the United Kingdom.

Recent incorporations in British Columbia include the Genoa Logging Co., Ltd., Victoria, B.C., capital \$250,000; Massett Timber Co., Ltd., Vancouver, capital \$1,000,000; Gulf Sawmills Ltd., Vancouver, capital \$20,000; the licensing of the Elk Lake Lumber Co., Ltd., incorporated in Manitoba, to do business in British Columbia, with head offices in Winnipeg and Fernie.

The Forest Mills Company will shortly resume operations in Revelstoke and upon Kootenay Lake upon a much enlarged basis, involving the construction of several new mills, which will afford employment to at least 1500 men. The company has been reorganized and W. A. Anstie, managing director, left for London this month for the purpose of conferring with the owners.

According to a recent report received from British Columbia all the mills reporting showed stocks on hand of 136,000,000 ft. b.m. of lumber. In September last the amount was 168,000,000 ft., and a year ago the quantity on hand in B. C. was 188,000,000 ft. Thus today the amount of lumber on stick in the Pacific Coast province is over 50,000,000 feet less than a year ago and decreasing all the while, owing to the unusually active demand.

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

Dunbar Engine & Foundry Co.

WOODSTOCK, N.B.

ONTARIO

Canada's Banner Province

Ontario's timber production last year valued at \$26,774,937 or 40% of Canada's total output.

Pine production,	905,442,000 ft. B.M.
Pulpwood,	246,282 cords.
Railway Ties,	5,704,459.

Ontario's woodworking industries, using 34 different kinds of wood, provide a ready market for the lumberman. Eighty-two per cent. of lumber used in Ontario's industries purchased within the Province.

Ontario's vast resources offer unsurpassed opportunities to the lumberman.

DUPLEX TRUCKS

**BUILT FOR
BUSINESS**

The Duplex Limited

HERE is a general purpose truck of medium capacity, pneumatic tired, which develops a road speed of 25 miles per hour loaded, with the motor running only 1300 R.P.M.

This means that the power is in the motor itself—and the Duplex Limited does not depend for its power on low gear ratio.

The Duplex Limited is a Duplex through and through—fully as fit for its class of work as the famous Duplex 4-Wheel Drive—which has such a wonderful prestige in the heavy duty field.

4 Cylinder, enclosed type motor—water cooled—cast enbloc. Bore 4", Stroke 5½". 3 Point Suspension, Pneumatic Cord tires, 145" wheel base. Equipped with Windshield, Electric lighting and starting; Ammeter; Boyce Motometer; Speedometer; Electric Horn; Tools; Jack; Rim Wrench; Front fenders; Grease gun. Driver's seat without extra charge. (Power Tire pump at extra charge.)

DUPLEX
BUILT
FOR BUSINESS

IT is a fact that greater numbers of trucks are today being bought on their known performance value—not what you think they can do but what they actually do accomplish.

The famous Duplex 4-Wheel Drive Heavy Duty Truck has back of it years of remarkable achievement—and a standing so high that it is generally accepted as the leading truck of its kind.

In the Lumber and Logging Industry; in the Oil Fields; in Road Construction work; for hauling Sand, Gravel and Concrete—in fact wherever heavy hauling is done there you will find Duplex 4-Wheel Drive Trucks—and you will find them making good.

The Duplex Truck Company is one of the oldest and most successful truck companies in America—made so by the owner service of the Duplex Truck itself.

Today Duplex 4-Wheel Drive Trucks are finding increasing favor in all lines of business because everywhere business men want to get away from experimenting with trucks.

The facts about the Duplex 4-Wheel Drive are becoming more and more known.

Duplex 4-Wheel Drive—3½ Ton Capacity. Price \$4000, f. o. b. Lansing

The more critical you are as a buyer the more essential it is that you investigate the Duplex. Write for folders which give the facts about the Duplex in owners hands.

The Ideal Edger for Light Mills

Specifications

Our new Double Edger is built on entirely new lines, and possesses many features that commend it to mill men. The saving in material alone will soon pay for the machine. The output of a mill with this machine can be increased by one-third. It is best adapted for medium-sized or portable mills that cut from 5,000 to 25,000 feet of lumber per day.

SAWS—This Edger is fitted with either two or three saws as required. The saws are 16 in. in diameter, and 10 in. gauge. The greatest distance between saws is:—Two saw machines, 24 in.; three saw machine, 20 in., the least distance between saws, 2 in.

DRIVE PULLEY—The Drive Pulley is 9 in. x 9 in., affording a good belt grip, and is supported by an outside bearing.

SAW ARBOR—The Saw Arbor is made of 2½ in. steel, and has very wide bearings.

KEEP YOUR WORKMEN SATISFIED!

RELIEF from the general building shortage which confronts us to-day will come in proportion to the extra production your workmen give. They give this extra production when working conditions are agreeable. Keep them satisfied. Give them a clean, healthy place to work in; it is a paying investment. A mill clogged with sawdust and shavings retards production; it is neither a pleasant nor a safe place to work in. Dust-filled air is not healthful. The constant breathing of dust into the lungs impairs health and impedes energy.

REMOVE THE SOURCE OF DISCONTENT

by taking the sawdust and shavings directly from the saws and planers. Install a

Sturtevant

(TRADE MARK)

Planing Mill Exhaust System

and place your mill on a production basis and your workmen in a co-operative frame of mind. Sturtevant systems are complete. They are built to your requirements. Installation is simple, and upkeep is a minor consideration.

Our bulletins on these systems are very comprehensive and will be sent for the asking.

KLIM

Gives Variety to the Camp Menu

A variety of well-cooked food does more than anything else to breed contentment and that feeling of general well-being so necessary to the smooth operation of a lumber camp. "The same old thing again" has started many an exodus from camp, and a change of grub has many a time stopped it.

The cook who is supplied with plenty of Klim does not worry about the "sameness" of the food getting on the men's nerves. He is able to prepare dozens of appetizing, milk-containing dishes to add variety to the meals, and in nine cases out of ten, is only too happy to display his skill.

Give your cooks this chance to help you get the most efficiency from your crews. The Klim you will use in a season will cost so little, and the results will be so gratifying, you will be sorry you had not used it before.

To make a quart of liquid Klim, place a cupfull on top of a bowl or pitcher of cold water and whip briskly until dissolved. A quart of separated milk fresh from the dairy could not taste better.

Back in 1911

the General Superintendent of the Blackwell Lumber Company at Coeuer d'Alene, wrote us that---

"It is nearly four years since we put your Genuine in our gang. The metal has worked perfectly and the bearing is in good shape today. This is a very good record as our gang has some very heavy work in this Western Pine."

Besides our Aluminum Genuine Babbitt the Blackwell Lumber Co. also use Syracuse White Bronze in their logging cars and on the crank and drum-shaft bearings on their logging engines.

Let us send you a sample bar of Aluminum Genuine Babbitt so that you may see what this metal is.

TRADE MARK

Another Reason why Huther Brothers Dado Heads Are Better

Fifty years ago the Huther Bros. Saw Mfg. Company started experimenting with saws to facilitate cutting perfect grooves of any width either with or across the grain. This experimenting finally led to the inventing and patenting of the present Dado Head, which is conceded by authorities to be the foremost groover offered the woodworking trade.

When you purchase a Huther Brothers Dado Head you are buying a saw developed through fifty years of making better saws better.

Send for one on approval. Return it at our expense if unsatisfactory.

HUTHER BROS SAW MFG. CO.
ROCHESTER, N. Y.

THE POWER YOU PAY FOR

YOU pay for power according to the coal you burn, but you get what your belts deliver. A fraction of 1% saved in power transmitted soon pays the cost difference between a poor belt and a good one. One breakdown may wipe out ten times the cost of any belt.

The right belt in the right place boosts profits.

Among Graton & Knight Leather Belts there are right belts for every drive. Belts that will deliver maximum power year in and year out without a halt. They do this because they are made from leather—tanned in our own tannery especially for belting purposes. This preserves and intensifies the strength, toughness and flexibility of the hide as worn on the back of an active, living steer.

Our booklet, "Standardized Leather Belting," explains how to find the right belt. A copy will be sent you upon request.

Special Prices

"A Manual for Northern Woodsmen," by Austin Cary. Published in 1918 by The Harvard University Press, Cambridge, Mass. 302 pages and illustrations. Price \$2.75.

Baughman's "Buyer & Seller." The handiest labor-saving book for lumbermen ever devised. Desk size, 300 pages, \$3.00. Pocket edition, 188 pages, \$1.50.

"Baughman's Cost Tables" for figuring cost of any article by the foot, piece, pound or ton. 127 pages, 5 1/4 in. by 7 in. Price, flexible leather, \$1.50; flexible Morocco, \$2.50.

Chapin's Lumber Reckoner, valuable in the saving of time, labor and errors. Size 4 in. x 7 in., 171 pages. Price, cloth binding, \$2.25, Morocco, \$3.25.

"Climax" tally book, bound in sheep, with hand straps. Size 4 1/4 x 8 1/4, 110 pages. Price \$1.75.

"Lumberman's and Logger's Guide," just published by the author, Bernard Breton, size, 6 in x 9 in., 136 pages, dealing with the merits and uses of Douglas Fir, California Redwood and the leading Commercial Woods of the Pacific Coasts. Contains Log Tables and other useful information. Price \$1.00.

"The Kiln Drying of Lumber," a Practical and Theoretical Treatise, by Harry Donald Tiemann, M.E., M.F. Just published by J. B. Lippincott Co. 316 pages, illustrated. Price \$4.50.

Seasoning of Wood; A Treatise of the Natural and Artificial Processes Employed in the Preparation of Lumber for Manufacture, with Detailed Explanations of its Uses, Characteristics and Properties, by Joseph Wagner. Published by D. Van Nostrand Co., in 1917. 274 pages, illustrated. Price \$3.00.

The Preservation of Structural Timber, by Howard F. Weiss. Published in 1915 by McGraw-Hill Book Company, 312 pages, illustrated. Price \$3.

Timber, Its Strength, Seasoning and Grading, by Harold S. Betts. 234 pages, illustrated. Price \$3.00.

Utilization of Wood-Waste (Second Revised Edition), by Ernst Hubbard. Published in 1915 by Scott, Greenwood & Sons. 192 pages, illustrated. Price \$2.00.

Vest Pocket Ready Reckoner for Lumbermen. 11th edition. Published by the American Lumberman. Price 35 cents.

McCordick's Lace Leathers

Standard for all Lumber and planing mills. Justifies present prices. Cheapest in the long run.

"Specify McCordick's." For sale by all good belting and hardwood firms.

"HAMILTON" EDGERS

Dependable Accurate Saw Mill Machinery

*Used In
Scores Of
Mills All
Over Canada*

LEADERSHIP, after all, ascends to the fittest. Economy, service and value are the qualities which count.

The "Hamilton" imprint has been known for years as a sufficient testimonial for these merits.

"Hamilton" Garland Gang Edgers are especially recognized for their worth. They are strong, accurate and easily operated, made in all widths with necessary number of saws to suit requirements.

Let us get together when you are in need of anything for the sawmill.

We manufacture a complete line of sawmill machinery for either band or circular mills.

William Hamilton Co., Limited

Peterboro, Ontario

Agent—J. L. NEILSON & CO. Winnipeg, Man.

SECTION OF STEAM HOSE SHOWING THE EFFECTS OF WIRE-WINDING UNDER PRESSURE.

SECTION OF GOODYEAR STEAM HOSE UNDER THE SAME PRESSURE.

Goodyear has made Wire-Winding on Steam Hose Unnecessary

THAT the expansion of steam in steam hose had to be controlled by wire-winding has been long taken for granted by industry. Of course, the wire became bent and the hose choked up; it became too hot to handle; it was inconvenient to cut into shorter lengths; the wire cut through the cover. But it had always been so. And wire-winding seemed essential to protect hose from rough usage and from pressure bursts.

The illustration shows what wire-winding does to steam hose. Under the heat and pressure of use, the hose expands faster than the wire. Bulges and blisters form. The tube cracks and the fabric is weakened.

Goodyear has made wire-winding on steam hose unnecessary. Goodyear has developed a

hose fabric strong enough to control steam under high pressure—tough enough to insure long service *without special winding or covering*. Add an inner tube of special compound to resist heat and a tough cover—there you have the story of very long service and very low final cost.

The high quality of Goodyear Steam Hose—the unusual construction, developed solely to meet the severe conditions under which steam hose is used—are but samples of what you will find in all Goodyear Industrial Hose.

Goodyear has scientifically developed a hose for every industrial use. Samples of this hose, and the advice of a trained technical man, are yours for the asking—without obligation. Phone, wire or write the nearest branch.

HIGH-LEAD SKIDDING--WHAT IT IS

Briefly told, the Skidder, whether Steam or Gasoline power (we make both) is placed near the base of a tall tree, the "spar tree," close to the track. The limbs are removed from the tree, and a heavy block attached near the top, and a lighter block lower down. The tree is guyed with four or five guy wires to prevent springing or breaking.

The main haul cable is then run from one drum up through the upper sheave block, and out to the farther end of the run, maybe 600 feet away. It is there fastened to a lighter cable, called the return line. This return cable is passed through a sheave block attached to a stump, then on to another block on another stump, to keep the two lines apart, then back to the other drum of the skidder, through the second block on the tree.

In operation, the tongs are made fast to the main haul cable. They are then set in the log, and the log hauled in to the "spar tree," where the tongs are released from the log, and hauled out again by the return cable.

The height of the "spar tree" causes the forward end of the log to be raised off the ground as it comes in, so it steers itself through or over all obstructions. The Loading Machine then picks the logs up and loads them on the cars.

We make these Skidding and Loading Machines for either Steam or Gasoline Power, and offer you a choice of 7 sizes, one of which should be just right for your work.

Get our Booklet "Suggestions for the Lumberman." It is free, and is worth studying.

MARSH ENGINEERING WORKS LTD. Established 1846 **BELLEVILLE, ONT.**
Sales Agents: **MUSSENS LIMITED, Montreal, Toronto, Winnipeg, Vancouver**

The Three Goodhue Belts

"EXTRA" "STANDARD" "ACME WATERPROOF"

These three brands are made for three different services and each brand is the best quality made from selected hides with the stretch taken out.

"Goodhue Belts" stretch less than any other belt by 15 to 25 per cent. This quality effects a great saving because it is unnecessary to be continually shortening the belt to keep it taut.

"Acme Waterproof" brand is made for the wet places in a mill and will give a remarkable service under the most trying conditions.

When you buy a belt—buy a Goodhue. Prices and particulars on request.

DISSTON-SAWS

THE BEST KNOWN SAW IN THE WORLD

Each year finds a greater number of leading mills using Disston Saws exclusively. Mill operators know that the success of their mill—the quality and quantity of lumber they turn out—depends on the saw they use.

It is natural, therefore, for them to choose Disston Saws—the acknowledged standard in quality for 80 years.

LINK-BELT Saw Mill Chain

FOR elevating and conveying purposes, for medium and high-speed power transmission, for work of a crude nature, and for work requiring the highest possible efficiency and greatest accuracy, we are prepared to furnish types of Link-Belt of such construction and possessing such qualities as make them the most desirable for the service expected of them.

By reason of the long-continued maintenance of such high standards of excellence, insured by rigid tests and careful inspection given to every foot of Link-Belt, by a skilled chain-making organization; and our large available stocks; we have developed our line of saw mill chains to a high

standard of quality. We solicit your business on the basis of quality and service.

Look for this trade >—< mark on each link. It identifies the genuine Link-Belt—every link of which is guaranteed.

Write for our Saw Mill Link-Belt Catalog No. 260.

How They do it in Wisconsin

As installed in plant of
Rogers-Ruger Lumber Co.,
Superior, Wisconsin

The Yates No. 177 Double Surfacers

is used extensively by Wisconsin manufacturers in making many well-known wood products, as it is in many of the leading establishments throughout the world.

The reason for its popularity is that the No. 177 always makes good.

This machine is sturdily constructed for long service and will handle stock from capacity down to a fraction of an inch in thickness with economy and dispatch. Equipped with round heads and Yates improved grinding and jointing devices, the No. 177 will give fine finish at the fastest rates of feed.

Our free, illustrated circular gives detailed information regarding its many features. This will be sent to you on request.

ATKINS STERLING QUALITY SAWS

The Leading Saw Makers of the World

This would mean nothing to the user if quantity production and quality production did not go hand in hand in the Atkins plant. Our large organization and resources are the means of producing a quality product at a moderate cost.

Hundreds of hands and minds contribute to the excellence of Atkins. Tons of the finest steel are constantly being forged. We have the men, the plant and the product which

makes it possible for us to consistently use the slogan—"Atkins Always Ahead" and to present to Canadian lumbermen saws of which we may be justly proud

Because of the quality of materials—the better design—and skilled workmanship—these saws of Sterling Quality cut easier and faster—hold their edge longer—Atkins has come to mean "the name back of saw value."

E. C. ATKINS & CO.

Factory: HAMILTON, ONT. Branch: 109 Powell St., VANCOUVER, B.C.

Proctor Automatic Veneer Dryer

RE-DRYING VENEERS

Furniture and piano manufacturers and other users of veneers, who do not make the veneers themselves, experience considerable annoyance and trouble due to the moisture either left in the veneer by the manufacturer, or absorbed en route from the manufacturer to the user. Such imperfectly dried stock is the cause of a great deal of waste, not only in veneers, but also in time and labor.

It is found advantageous and profitable to use a Proctor Dryer through which all veneers are put before gluing. In this way, perfectly dried stock is always assured, and as a consequence perfectly glued-up work.

"Brazel Patent" SNOW PLOWS

Known in every Camp from the Atlantic to the Pacific as the most satisfactory Snow Plow made.

Combination Model, Lumberman's Snow Plow, can be used either with or without Rut Cutter.

One man to operate. Adjusting wheels close together make change for light or heavy work in an instant. Wings placed to throw snow 9 ft. wider than sleigh track or narrower if desired. Height of mouldboards prevent snow falling back on track. BRAZEL PLOWS cut 6 in. wider than logging sleighs, roll snow outside track and away from roadway. Cut off knolls, fill up holes and leave a perfectly level road. Cut off dirt and manure heaps from an ice road, leaving a clean roadbed. Roll and push entirely away from the road, 12 inches of loose snow each time the plow passes over.

Why the Bell Locomotive is so Well Suited to Lumber Haulage

The tractive effort of the Bell Locomotive is 50% greater than direct-connected type locomotive of equal weight. This power is obtained with cheap liquid fuel such as kerosene, fuel oil, distillate or crude oils. The economy effected makes the Bell Locomotive a most important factor in cutting expenses of logging operations. Strongly built for constant use, simple of construction, and compact. Operated by one man only. Does not emit hot ashes or sparks. All parts interchangeable and kept in stock for immediate delivery. Made in sizes from 2 to 25 tons in working order.

Write for catalogue and prices today.

Rapid and Accurate

FOR mills of medium capacity, we recommend our "Standard" Edgers for edging lumber rapidly and accurately. Note that the machine here shown is self contained, being mounted on a base cast in one piece. This means that the machine must remain in perfect alignment. Years of use have proven the worth of these machines.

Sawmill Machinery

The Waterous Twin Circular Saw

in conjunction with the Kendall Circular Gang presents the cheapest way of turning small logs into merchantable lumber. Four men only are required to operate it.

It takes logs up to 16 ft. in length and will cut cants from 4 inches to 12 inches in thickness.

THE TWIN CIRCULAR consists of two independently driven saw frames, carried on planed iron slides upon which they are adjustable, to permit cutting a cant as narrow as 4 inches or to a width of 12 inches.

FRAME CASTING is in one piece with the bearing cast solid with the frame to make mandrel alignment a certainty. The saw frames are adjustable by rack and pinion and controlled by a hand wheel making for rapidity of movement with a minimum of effort and no possibility of a shift during cutting.

SAWS are 42" in diameter and run at 700 R.P.M.

MANDRELS measure 3, 7/16 inches diameter and carry a 20" x 13" pulley.

FIRST IN QUALITY

American No. 77A—Model 5

Mr. LUMBERMAN:

Has your Superintendent or Foreman suggested or insisted upon the need of a fast feed matcher in your mill?

If so, have you investigated the qualities of "AMERICAN MACHINES"?

We suggest that you write to any of the following—All users and SATISFIED:—

T. H. Hancock ... Toronto.
 Wm. Copping ... Joliette, Que.
 Ladder Lake Lumber Co. ... Ladder Lake.
 Prince Albert Lumber Co. ... Prince Albert, Sask.
 W. C. Edwards Lumber Co. ... Ottawa, Ont.
 Finger Lumber Co. ... The Pas, Man.
 Can. Puget Sound Lbr. Co. ... Victoria, B.C.
 Canadian Western Lumber Co. ... Fraser Mills, B.C.

Adams River Lumber Co. ... Chase, B.C.
 Giscome Lumber Co. ... Giscome, B.C.
 Mundy Lumber Co. ... Three Valley, B.C.
 Mickle Dymont ... Gravenhurst, Ont.
 Mickle Dymont ... Toronto.
 Fassett Lumber Co. ... Fassett, Que.
 Jos. L. Francois Co. ... Québec, Que.

And then if you still have doubts, talk it over with our Mr. Garlock.

Its superior points will quickly convince you of the advantages of installing an "AMERICAN".

“LUMBER”

The important history of this word is at present being written. A commodity that is being carried high on the flood of universal demand, far beyond the powers of Production and Distribution.

In the maelstrom of supply, demand, low production and car shortage, we are striving to serve our clients with their demands for B.C. Forest Products, to the best of our ability.

Yards: ————— Cairo, Ill.

We all know that prices on lumber are high. What is the cause of it? Mostly lack of production on account of labor conditions caused by the war. Labor has not come back to its usual high class standard and on account of the high wages paid, less work is done by every man, so that the production of lumber in 1919 was 35% below the 1914 production, adding the normal increase of production of 5% a year; while, on the other hand, the consumption of lumber on account of the almost stand still of building during the war, has increased enormously.

There is no chance for lumber production to catch up this year and therefore, prices will continue high. We, therefore, advise you to buy lumber as you need it, without regard to price; and as no doubt, you only buy when you want it, you want to buy it from people who can deliver the lumber to you promptly. We can do this as we have over two million feet of CYPRESS in our Cairo yard and can ship it at a week's notice. Besides, we have large stocks in the south and cars in transit at all times that can be diverted to you.

When you want CYPRESS—which is the best value of lumber today, send us an order. We will fill it promptly.

WE ARE THE CYPRESS SPECIALISTS

SIMONDS

Circular Saws

For the mill or woodworking shop saws that stand up to the work are a source of gratification to the filer or sawyer. It is safe to assume that the mill owner or operator will be the first to appreciate the economy of such saws. Less repairing and fewer delays mean the cutting of lumber cost if the saws cut the lumber as do **Simonds**. Our Inserted Tooth Rip and Cut-Off Saws are leaders in their field. They are economical because the teeth, which are renewable, stay in the plate and are strong and durable. **Simonds** Solid Circular Saws have long set the standard of **Quality and Efficiency**.

Feeding the Camp

IF that is your problem, remember that it is our business, too. We do a tremendous lumber camp trade and are fully acquainted with the food requirements of logging camps. We shall be glad to quote you on any lines you need this year, and will submit special quotations if you will drop us a card. We can supply you with all that's best in provisions and fresh meats, and give you a service you will appreciate.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice, at Buffalo, N. Y., under the Act of Congress of March 3rd, 1879.

Vol. 40

Toronto, February 1, 1920

No. 3

And the End Thereof Will Be In——

How much higher will lumber prices go, when will the end of the present advancing quotations come? These are questions which are on many lips and no one will even attempt to conjecture the outcome. The reason is simple for no one knows and he who would make any predictions must come under the category of a knave or the "I-told-you-so" class. The intelligent, reasoning individual has no precedent to guide him in his opinions or deductions, and frankly admits that he does not know. In matters of price, demand and production he is what theologians might term an agnostic. There seems to be no likelihood at any rate of an early collapse. With the cost of living still ascending, with wages mounting all the while, with requisitions for forest products far greater than both the sources of supply or the supplies themselves, no one can venture an authoritative view when the present upward trend will terminate. The same observation applies to nearly every commodity in daily use or consumption. In the meantime, there is nothing to do but pursue a straightforward course, doing the best possible under the circumstances and meeting each day's problems as they arise. Of course, there will be an end to the aviation some time and somewhere.

In expressions of opinion, based on personal grounds rather than on accepted trade customs, history and expansion, here is a quartette of predictions recently made to the "Canada Lumberman." They all differ widely. A leading manufacturer says: "The world is very short of goods and the producer, who is willing to work the hardest stands to benefit the most. Until production reaches a state where it begins to turn the edge on demand, a radical change in conditions is not to be looked for. Just when that day will come I would not venture to say."

An eastern producer remarks: "Yes, values will continue to climb

until things become top heavy and the whole structure, which has been built so high during late months, will topple over by its own weight."

A third lumberman adds: "The only thing that will reduce prices would be a sort of co-operative, concerted and associated movement whereby the wholesaler would consent to take less for his goods, and also the millman, the worker, the storekeeper, the jobber, the railways and—in fact, every one who, in any way, forms a section of the commercial and industrial circle. Until both labor and capital realize this, present conditions will continue. Every one must be content with less. Who is going to be the first to make the start and, even if a beginning were made, would all other branches follow it up? There are many wheels within a wheel."

Here is a fourth opinion: "Every time there is an advance in labor there is a corresponding increase in the price of the finished product and all that enters into it. The percentage has to be increased to carry the extra load and, in the end, the public must pay. The consumer has to shoulder the additional burden in every advance. This fact has always been self-evident, but it has been brought home with greater force and pointedness during the past few months than in any prior period. The peak of the load does not seem to have been reached yet in any one commodity. Ever upward is the flight of prices."

Much has been heard about the stiff advances made in lumber and more particularly, lath. The average increase, except on a few lines like hardwood flooring, has been about one hundred per cent. over pre war quotations. Glass has gone up four hundred per cent., brick, one hundred and twenty-five per cent., hardware, two hundred and fifty per cent., electric installations, two hundred and fifty per cent., and wages, one hundred per cent., all since Kaiser Bill started the unpleasantness in Europe. Then furniture, particularly the better grade and all pieces containing mirrors, has undergone so many raises that it is almost impossible to strike an average of aviation. In consonance with the augmented figure that everything in the building line is now commanding, houses of every kind are abnormally high and scarce. Rents also come in the same category. Once more the question arises when will it all end and echo alone answers when and where?

An Economic Problem and Its Solution

The balance of trade is running rather heavily against Canada at the present time. Canadian money is far from being worth its normal value across the border. Of course, this condition of monetary status does not apply to the Dominion alone, but to Great Britain and other European countries. The exchange situation has given rise to much earnest thought and attention, and the financial problem is viewed quite differently from a number of angles. Much depends or whether the critic is an exporter or an importer. In the case of the former he is in the rather unique position of a man on the inside looking out, while the latter occupies a relationship akin to one on the outside looking in. At this juncture, Canadian exporters of pulp, paper, lumber and other products are cleaning up a handsome sum owing to the premium on the American dollar, on which basis all firms stipulate that they be paid.

With reference to importers and many manufacturers, they have to buy large quantities of raw materials on the other side of the line, and settle for the same at the present rate of exchange. This causes costs to ascend on the finished product, and the consumer naturally has to suffer in the long run—as he always does in every economic readjustment. In one respect the adverse trade balance against Canada and the diminished purchasing power of the Canadian dollar, not alone at home but particularly abroad, may cause a number of selfish and short-sighted people, who, heretofore, have insisted on having American shoes, clothes, hats, jewellery, furniture, carpets, automobiles, musical instruments, etc., in preference to equally as well made, durable and attractive Canadian goods in these various lines, to stop and think.

Local patriotism and community pride, along with public spirit, will build up any town or city. The same qualities, when applied in

a broader and national sense, will bring out and develop all the initiative, latent talent and productive capacity of a people. The whole question is of a somewhat complex economic character, but the classes of persons who, during the present period of reconstruction and the conversion of industry from a war to a peace footing, are doing the most to help along these great forward movements, are the Canadian exporter and the citizen who produces more, exercises thrift, works harder and buys Canadian goods in preference to foreign articles. The latter phase is particularly true when commodities of equal quality, wear, style and excellence can be obtained at home.

Canada and Canadians want more cohesion and unity as a people and a more pronounced national, public spirit, a keener appreciation of our advantages and facilities and a visualized realization of the future and splendid opportunities that lie at our own door. A distant field has always looked too green, and far-away pictures have been painted in too lurid colors. If the viewpoint of the average Canadian is focused a little closer he will realize with a greater pride and a larger measure of satisfaction that things, in our own household, are quite as good as those of our neighbors. While the Made-in-Canada move may have originated from a somewhat narrow idea and provincial conception, it is during the present epoch, as far as our own interests are concerned—if carried out in every-day business practice—one of the most effective methods of equalizing and rehabilitating Canadian activities and development and placing the Dominion on the map from an industrial, economic and national standpoint.

Adjusting Grievances in Daily Business

Machinery, that runs the smoothest, generally results in the largest production. Delays, break-downs and time and labor-losing methods are thereby eliminated. The same principle obtains in connection with the building up of a great business. The better the service rendered, the higher the quality of the goods and the more agreeable and satisfactory the relationship between seller and buyer, producer and consumer, the more fruitful are the net results.

In the manifold transactions of daily life everything is not going to run in ship-shape at all times and under all circumstances. There is bound to be friction occasionally, caused by misunderstanding, misinterpretation of letters, terms or contracts, delayed deliveries, missing consignments, errors in classification, the shortcomings of others;—in fact, there may be many contributing agencies for which a firm is not directly but only incidentally or indirectly responsible. Perhaps it is a retail lumberman who writes a wholesaler or mill man, complaining of substitution, improper grading, errors in routing, misunderstanding in price or some oversight—quite unintentional—in the matter of quality, quantity, width, thickness, conditions of payment, discount, freight, billing, invoicing, etc. The customer sits down and sends in a warm letter. He is in a temper when he writes, and the more he thinks of his grievance, the hotter he gets, instead of being calm and dispassionate at a time when, perhaps, other things have arisen to irritate him all the more. He gets the whole thing off his chest reads it with grim satisfaction, signs his name and despatches the letter with the mental ejaculation: "Well, that will bring those fellows to time. I guess they won't try and put one over on me again. They may think I am an easy mark but they are waking up the wrong party. I'm not going to stand for any more of that kind of rank service, trickery, or substitution, and you can bet your bottom dollar that I will not be a victim. They may pass the buck to others, but not to me."

What is the result? The sales manager, manufacturer or managing director gets the hot retort from the customer, and, mayhap, his firm is not at fault at all. The omission or oversight, if it exists, is purely owing to the fault of the customer or some shortcoming, evasion, blindness, or misinterpretation on his part. Knowing that his firm is wholly in the right, the executive too frequently is disposed to dictate a reply along the same fiery lines, telling Mr. Customer where to get off at, and showing him that the firm is not going to stand for any more of his bluff or bluster, dominance, belch-

ing, misrepresentation or eternal kicking over quality, delivery, payment, etc.

What is the next move? Mr. Customer has his indignation aroused a little more and another communication is forwarded in more bitter, denunciatory terms than the first. This elicits a response of a similar nature and so the conflict continues ad infinitum. The outcome is that the company loses, perhaps, a good customer, and the latter a valuable and reliable source of supply. This is a mutually destructive business warfare and results in no profit or advantage to anyone.

Writing to the "Canada Lumberman" a leading wholesaler sums up such a state of affairs as already outlined, by stating that when he secured his first responsible position and had charge of the sales for a sawmill, he got a red-hot letter from one of the firm's patrons. There was no cause for the sender "going off at half-cock" and blowing everybody to smithereens. He indited a reply that was a squelcher or an exterminator. The more he thought of the injustice and grossly unfair nature of the customer's attack, the more incisive and acrimonious he made the rejoinder. Continuing, he says, "the boss called me in, read the customer's letter and then my own. I was pretty proud of my effort and told my employer that I thought Mr. B. was an over-bearing, prejudiced and disgruntled individual, and that my response would bring him to time, and show him he could not put one over on us."

"It is all very well," remarked my employer, "but what will be the result? You are writing this when you are in a nasty mood. When Mr. B. gets it his tempestuous nature will go up a few degrees higher. We will then get another letter that is worse than the first. Perhaps, with your pugnacious disposition, you will fight the thing out in the mails, and the climax will be that we will lose the patronage of this fellow, who has always paid his bills promptly, although somewhat troublesome to handle. There is no money in that for either you or I. The best way is for you to board a train, go and see him, have a frank, friendly discussion and clean up all doubt and misunderstanding."

"I have found this pays best in the long run, in cases of a chronic grievance, or in seeking to adjust complaints of an important character. I firmly believe there is much more to be gained in a personal interview, in coming in touch and in open, free-minded conference on any matter than there is in wasting time, effort and patience in dictating either long or short letters, whether they be of an explanatory, apologetic, effusive, indignant, injured, innocent or prefunctory character. My motto has always been that in cases of difficulty and danger, there is very much more in see-the-man-solution than in any other means of adjusting a perplexing proposition, rectifying a wrong or correcting a serious misunderstanding. The heart-to-heart talk, face-to-face attitude, the personal viewpoint and the direct method count for much in keeping the machinery of business life lubricated and running smoothly. And remember! there are always two sides to every story or altercation and one party is seldom entirely in the right at all times."

How It Works the Other Way

Under the caption "How It Works the Other Way About," the Lumber Trade Journal, in a recent issue, relates several very interesting circumstances that show clearly that the wage earner can, and under certain conditions does, attempt to drive his wages unreasonably high. They are decidedly worth reading and are reprinted herewith because of that reason:

For example, the editor of this periodical says, we saw in the paper the other day where a manufacturing jeweler of New York City offered to turn over his plant to the strikers therein. We take the outlines of the tale as stated for what it may be worth. The business is said to be forty years established and all the proprietor asked was to turn it over to his men in return for their simple note of hand, a situation that may seem impossible to some people outside the covers of a work of fiction. The owner offered to assume all debts and liabilities and give a clean bill of sale in return for this plain note

of hand and to manage the place for six months, so as to give them a good start, in return for a mere salary and then to retire with an agreement not to re-enter the trade and compete with them.

But, would they have it?

They would not! And there you are.

So the man making the offer regards his proposal, coupled with the unwillingness of his men to take up his offer, as conclusive that the cry of labor to take over industry is "empty shouting." The last two words contain the crux of the matter.

This story is immediately capped by another well-authenticated instance of a similar nature fairly closely related to the lumber industry which has just come to the editorial desk, only the workmen took the owner at his word in this instance to their utter discomfiture in the end. Let our correspondent tell it in his own convincing, plain, blunt way:

"With reference to the company affairs that I mentioned to you, this was a cabinet manufacturer of very much volume and he had prepared for this situation. Upon being approached by the committee of the shop, he stated that their demands could not be met and that he had decided to turn over the business to them. Complications set in, of course, and they were practically like a ship without a rudder, with no one in charge with sufficient ability or authority to enable them to proceed without friction. They got along, however, as long as there were incoming funds, but their troubles were brought to an end when they ran out of ready funds and were unable to meet payrolls. In the end they were glad to send the same committee after their former employer. They gave him a unanimous vote of confidence in his ability to treat them fair and went ahead on the old basis. You can readily gather from this the side issues and realize the conditions that would and did occur."

All's well that ends well and one is glad to give a happy ending to this strange, true tale from the nearby Middle West.

It is a pity, both for employers and employees, industrial captains and industrial workers alike, that a lot more men are not so situated and actuated with such courage as to give the men their own way in such a case, for such object lessons are convincing. Particularly the first lesson which it inculcates is that the Utopian communistic idea is grand and glorious and fine—only as long as the already accumulated surplus holds out.

The Policy That Pays the Best

Ordinarily one would suppose that there could be no question as to the decision to be made between curtness and courtesy in business dealings, but something has been called to the attention within the past few days which indicates that some people of supposedly good judgment have not made the correct decision. It is not to be understood that this particular form of curtness is in danger of becoming a common thing in the lumber business, or in any other line of business, but, in general, lack of courtesy is much more common than it should be, says an exchange.

To get down to cases, it has been called to the attention of the writer that a few wholesalers are taking particular pleasure in turning down would-be buyers of lumber in a manner which is very unpleasant, to say the least. In other words, they are making unnecessarily sharp answers where they either cannot, or do not care to, accept offered business.

In defense of this action, they say that when the shoe was on the other foot it was the pleasure of these buyers to take advantage of the situation and beat the market down as far as possible. When the sellers were much in need of business, these buyers were noted for taking their "pound of flesh."

It might be expected that the very fact that the situation has turned upside down would be a warning to the discourteous wholesaler that it might occur again, in which event, he would have no right to expect anything but that the chickens will come home to roost.

Fortunately, for the good of the trade, the number of buyers and sellers who indulge in this sort of thing is very small, and, probably growing constantly smaller. People are beginning to learn that courtesy and service are more potent forces in building up good will and business volume than any other factor. Price was formerly the

argument. Now it is service, and no one can render service and be discourteous about it. Even those who dislike to do anything not "named in the contract" find that a little extra in the way of service brings many times what it costs.

Editorial Short Lengths

The C. L. A. convention in Quebec City, on February 4 and 5, will be the greatest and most representative ever held. Every member or prospective member should make it his business to attend.

Take a census of your farm friends at the present time, and discover whether or not all their property, their machinery, their crops, their live stock, their families, and themselves, are properly housed for the winter and protected from the weather.

There seems to be no limit to the ascension in values of paper stocks during the past few days, and each day records a new high level, says an exchange. The same pertinent observation might be applied to nearly every commodity in daily use or consumption.

"The retail lumber dealer is the most important business man in a town," said a speaker recently at a gathering of the staff of a large lumber organization. "Any man whose business it is to up-build the community, to improve it, to better its living conditions, is a tremendous asset to that community. That is the business of the retail lumber dealer."

"The million or more cords of wood that is being annually shipped to the United States, returning only about 15 million dollars, if made into pulp and paper in Canada would not only enrich the Dominion to the extent of more than eighty million dollars per year, but would prolong the life of all our paper mills, a period of at least five or six years beyond their present expectancy. —F. J. D. Barnjum, Annapolis Royal, N. S.

The broad-minded man generally does the right thing at the right time, and it has been demonstrated that he, who acts squarely and fairly, seldom has cause for any regrets. The expressive view of one Western manufacturer is that prices are everywhere too high and eventually will come down. Labor will not be cheaper for a long period and the query naturally arises—why? The answer is because wages cannot down and prices go up. It is an economic impossibility. When production overtakes demand and the orgy of spending money recklessly and in a totally unwarranted manner, has passed, the world will begin to get its balance. The average worker should realize that he cannot get more out of life or out of his job or, in fact, anything in this terrestrial sphere than he puts into it. It is another exemplification of the Scriptural injunction that "with whatsoever measure ye mete it shall be measured unto you again."

The oft-repeated complaint that technical men in the employ of the Federal Government are underpaid receives confirmation from Dr. A. McGill, chief analyst of the Pure Food and Drugs branch of the Department of Public Health, Ottawa. We have before drawn attention to the difficulty of keeping men on the staff of the Forest Products Laboratories, Montreal, owing to the higher salaries offered by lumber, pulp and paper companies, and to the action of the Government in raising the salary offered to secure the services of a superintendent of the laboratories,—action compelled by inability to obtain the right man at the price originally offered. Dr. McGill admits that the Government is outbid by commercial firms who desire chemists. "When you consider that all the important industries in Canada are realizing now the necessity of eliminating waste, you will readily see that the salary of an expert chemist is a small factor in comparison with the saving such a chemist is able to effect. I have in mind now two firms employing chemists at \$5,000 a year, or more, which have taken our men, to whom this branch was paying \$1,700, and started them in at \$2,500. Under such conditions we just can't hold them," declared the Doctor recently. It is manifest that if the Government desire to retain technical men, they will have to raise the remuneration.

Wholesale Lumbermen Elect New Officers

Mr. Manbert Succeeds Mr. Clark as Chairman and Directorate is Increased—Duty on Maple and Minimum Car Weights Create Lively Discussion

The annual meeting of the Wholesale Lumber Dealers Association, which was held recently at the Albany Club, Toronto, brought together a large number of members and was unquestionably the most successful and interesting session that the organization has held in its two years' history. Mr. A. E. Clark, Chairman for 1918 and 1919 presided.

The routine business was disposed of quickly, and the members settled down to a discussion of a number of important matters, which had developed since the meeting in November.

The Secretary reported having received a letter from the British Trade Commissioner at Toronto announcing the forthcoming British Timber Exhibition, which is to be held in London, England, from July 5th to 17th. The Commissioner asked the members of the Association to give the exhibition the best possible publicity. This exhibition will include all timbers grown within the British Empire. Its main object is to bring prominently before architects, inspectors and firms who have to specify timbers in their contracts, as well as the users and consumers of timbers the full range of empire grown timbers, specially those which, up to the present, are only very slightly, if at all, known in England, and at the same time to demonstrate the chief uses for which they are suitable. The building in which the exhibition will be held has a gross area of 40,000 square feet. A comprehensive catalogue will be prepared giving full particulars of all the exhibits which it is expected will serve as a useful book of reference in the future.

Duty Placed on Canadian Maple

The Chairman reported that shipments of maple from Canada into the United States had recently been subjected, at some ports of entry, to a duty of 10 per cent., being classified as "Cabinet Woods." There was a probability also that birch would be treated in a similar manner. His own firm had already been obliged to pay substantial amounts on the shipments of maple, and he understood that it was intended to make the regulation retro-active to cover shipments for about two months back. A large number of cars which his firm had shipped to the United States were now the subject of enquiry for the purpose of determining whether they were liable to duty. The situation was very serious, and he suggested that the Association should take any steps it could with a view to persuading the United States Customs Department to permit the entry of maple and birch under the "free" clause of the tariff. He pointed out that the great bulk of shipments of maple and birch to the United States were for such purposes as flooring, trim, automobile timbers, etc., and that while some of the shipments might be used as cabinet woods, the percentage was so small that it would not justify the classing of these woods as "Cabinet Woods."

On motion of Mr. A. E. Eckardt, seconded by Mr. Manbert, the Secretary was instructed to write to the Department of Customs at

Ottawa, and the Department of Customs at Washington, submitting the matter to them with a view to having maple and birch admitted free. The motion also instructed the Secretary to write to the National Wholesale Lumber Dealers Association and request them to give any assistance they could.

Mr. Guy H. Long, of Hamilton, reported several matters relating to transportation difficulties at Hamilton, one in connection with switching of cars, and one in connection with the loading of cars to "full visible capacity" beyond any question, had been reported by the freight agent at Hamilton, as loaded to less than "full visible capacity," thus preventing the shipper from claiming that the freight charge should be based upon the minimum weight. At the conclusion of the discussion on this subject, Mr. Long undertook to send to the Secretary full particulars in regard to matters, to be submitted to the transportation committee.

Billing Cars at Minimum Weights

Mr. A. E. Eckardt introduced a discussion upon the subject of freight tariffs. As chairman of the transportation committee, he reported that his committee had been discussing this matter in connection chiefly with the freight charges upon cars which had passed scaling points without being weighed. He had also taken the matter up with the manager of the Canadian Manufacturers Association. The result of the discussion by the Committee and with Mr. Walsh of the C. M. A. was that they had concluded that it was advisable to press for an order by the Dominion Board of Railway Commissioners, to the effect that, traffic originating from or moving past scaling points shall be billed at minimum weights and corrections made at scaling points; also that the consignee at destination shall not be required to pay upon more than the minimum weight when the agent is unable to give scaling particulars. The object of this proposal is to do away with the use of estimated weights on shipments of lumber whenever a car has passed a scaling point without being weighed.

The present estimated weights, as Mr. Eckardt pointed out, were established by the railway companies many years ago, and the manufacturing and shipping conditions of to-day have altered so greatly that their use is not fair to the shippers. Moreover, it was in the public interest that shipments of lumber should be weighed whenever possible, and that the railway companies should be required to give scaling particulars in all cases where their cars had passed a scaling point, failing which the minimum weight should apply. Mr. Eckardt believed that with such a regulation in force the number of claims made upon the railway companies for overcharges would be reduced to such an extent that both the shippers and the railroads would be greatly benefited, as they would not need to employ large staffs for handling claims.

He stated also that Mr. Walsh, Manager of the Canadian Manufacturers Association, was very favorably inclined towards this pro-

posal. Some years ago, in a hearing before the Board of Railway Commissioners, it had been clearly understood and agreed upon, as reported to Mr. Eckardt by Mr. Walsh, that the carriers must supply weighing particulars.

There was an extensive discussion of this proposal in which the tariff managers of several of the wholesale lumber firms, belonging to the Association took part, among them being Messrs. J. E. Green, of Terry and Gordon, J. H. Duthie of the MacDonald Lumber Co., and Roy Halliday of the R. Laidlaw Lumber Co., Ltd. On motion of Mr. A. E. Cates of the firm of Terry & Gordon, seconded by Mr. A. C. Manbert, it was unanimously carried that the Association should back up the Transportation Committee in connection with this matter.

When the motion had been carried, Mr. Eckardt suggested that all of the members of the Association should go over their claims for 1919 and send to the Secretary full information regarding all those claims which had to do with weights of carloads. Mr. Manbert suggested that the Secretary should send to each member of the Association a brief statement of Mr. Eckardt's request and urge them to comply with it promptly.

Directorate Increased to Six Members

Mr. A. E. Eckardt then introduced a discussion upon the advisability of increasing the number of members upon the Directorate of the Association. During the first two years of the Association's existence the officers of the Association had been a chairman and four directors. He thought that it would make for greater efficiency on the part of the board if the number of the directors were increased to six instead of four. The matter was discussed pretty fully and it was the unanimous opinion of all that the change would be advisable. This required a change in the by-laws, which could be made only by a two-thirds vote at the Annual Meeting. Mr. Eckardt, therefore, submitted a motion, seconded by Mr. W. C. Gall, to increase the Directors and it was unanimously carried.

The Chairman of the Association, Mr. A. E. Clark, then delivered a brief address, outlining the work of the Association during the past year, discussing its importance to the trade, and expressing his intention to give himself as fully to the work of the organization during the coming year as during the past two years.

The Treasurer's report was presented, showing a satisfactory balance in the bank. On motion of Mr. A. E. Eckardt, seconded by Mr. W. C. Gall, the Treasurer's report was adopted.

Mr. Manbert Appointed to the Chair

The election of officers was the next order of business. For the office of Chairman there was only one nomination, it being moved by Mr. H. G. McDermid, seconded by Mr. A. E. Eckardt, that Mr. A. C. Manbert should be Chairman of the Association for the year 1920. The motion was unanimously carried, and Mr. Clark then vacated the chair, Mr. Manbert presiding during the balance of the meeting.

Mr. Manbert expressed his appreciation of the honor briefly, and then called for nominations for six directors. The result of the elections for directors was the selection of the following: Mr. A. E. Clark, Toronto; Mr. A. E. Eckardt, Toronto; Mr. J. B. Jarvis, To-

ronto; Mr. C. W. Wilkinson, Toronto; Mr. Guy H. Long, Hamilton; Mr. H. J. Terry, Toronto.

Mr. J. L. Campbell then moved that a vote of thanks be passed and tendered to the officers of the association for the past year, in consideration of the close attention which they had given to the welfare of the organization. The motion was put by the chairman and carried unanimously.

The Annual of the C. L. A.

Mr. A. E. Clark drew the attention of the members to the forthcoming Annual Meeting of the Canadian Lumbermen's Association, which will be held at Quebec, P. Q., on February 4th and 5th and urged the members to attend the meeting.

Mr. A. C. Manbert stated that those members of the Wholesale Lumber Dealers Association, Inc., who did not belong already to the Canadian Lumbermen's Association should apply for membership immediately. The work of the Canadian Lumbermen's Association was quite apart from that which was carried on by the Wholesale Lumber Dealers Association, and one in which their efforts could be co-ordinated so as to result to the good of the lumber fraternity as a whole.

The Chairman also reminded the members that the Ontario Retail Lumber Dealers Association would hold their Annual Meeting at Hamilton, Ont., on Feb. 24th and 25th. He suggested that the wholesalers should give the retailers any assistance that might be requested of them in order to ensure the success of the gathering.

The meeting then adjourned and at a subsequent session of the new Board of Directors, Mr. H. Boulton was appointed Secretary-Treasurer on motion of Mr. A. E. Eckardt, seconded by Mr. Guy H. Long.

Crown Lands Revenues Constitute Record

The annual report of the Quebec Department of Lands and Forests by the Hon. Honore Mercier, the new Minister, shows that the total revenue of the Department for the year ending June 30th, 1919, was \$2,510,141.02.

At the close of the year the Department had an area of 7,514,518 acres of land subdivided into farm lots.

The chief sources of revenue are as follows: Waterways branch, \$292,974.85; ground rent for woods and forests, \$379,386.59; stumpage dues, \$1,357,996.07; fines for infractions and accrued interest, \$135,679.57.

It is pointed out in the report that the revenue for the year constitutes a record, being the largest since Confederation.

Are you really and truly cutting loose from your old time methods and trying modern merchandising methods, or have you still—like the faint hearted swimming student—got one foot on the bottom?

Interest your farmer friends at this time of the year in a little book of pictures and plans, showing useful things for his place that he can make himself, indoors, at this season of the year.

Money Talks Loudly in Lumber Sales Today

The Power of Ready Coin in the British Columbia Market—Costs of Production Still Grow and Prices Keep Ascending—The Contributing Causes

By "C. J. B." Vancouver

No doubt things will work out all right in due course in the lumber arena. Just at present, however, most firms in British Columbia require the services of a bouncer more than they need a salesman, in order to keep buyers from forcing business on them.

The troublesome factors in the lumber situation in B. C. at present, apart from unsettled labor conditions, which are common to all parts of the country, are underproduction and lack of transportation facilities. Demand exceeds supply to a very considerable extent, with the inevitable result of stiffening prices, and at the same time weather conditions incident to this season of the year have depressed the output of the mills considerably below normal. Meanwhile, orders accepted show a strong anticipation of next spring's business and continue in such volume that the average coast mill is heavily committed.

Unusually large order files for this time of year are the order of the day—so much so that in face of a very limited and unsatisfactory car supply, a considerable number of the mills have ceased taking business until shipments and orders are more evenly balanced. Out of such an abnormal situation abnormal prices have naturally developed. At the moment, and for some time past, lumber prices wholesale have been higher than lumber prices retail, which is a phenomenon not very often encountered, due, of course, to local conditions to some extent, but perhaps more to the active desire of the Canadian and American buyers—wholesale—to get covered for their spring requirements. The factor which would operate to relieve the situation is, of course, a car supply larger than normal, of which there does not seem much prospect in the immediate future.

How high prices will go, no one cares to predict—there must be a limit somewhere—a point at which demand will slacken. In fact, during the past few strenuous months the members of the trade have a good many times felt that the peak had been reached. But with little spells of pausing for breath, the movement has been on and up, and when we take into consideration the fact that we have as yet barely begun to feel the effects of foreign—i.e., water-borne demand—we are inclined to leave the question unanswered.

Not Making Huge Fortunes as Supposed

There is not a single line of manufactured lumber in B. C. that is not very stiff in price at present. Timbers lagged in the rear of the procession of items showing large advances, until just recently, when, owing to an advance in the price of logs and also of small dimension—they have been showing an upward tendency. Two months ago \$25.00 f.o.b. mill was about the going price, but at present \$28.00 is firm, \$30.00 is getting established and \$32.00 has been paid in a few instances. Flooring has perhaps been the leader of all B. C. items in carrying price advances. No. 2 and better, flat grain, which less than a year ago was being sold at \$45.00 and less f.o.b. Toronto, now commands \$58.00 to \$60.00 f.o.b. mill—which means \$73.00 to \$75.00 delivered, Toronto rate. No. 2 and better edge grain flooring is practically unobtainable—small quantities available from time to time bring \$70.00 to \$75.00 f.o.b. mill, and the end is not yet. No. 1 common boards and ship lap stand at \$34.00 to \$35.00 mill or the equivalent of \$53.00 to \$54.00 Toronto, while our despised No. 2 common is practically off the market and commands a price of \$28.00 to \$30.00 mill basis.

An Easterner has his own ideas regarding all this. He feels that when prices of B. C. lumber are higher than those of Ontario and Quebec stocks, the manufacturers are conducting a profiteering campaign or something of like nature. It does not require a lengthy stay on the Pacific Coast, however, to disabuse his mind. He finds here that, while a few mills owning their own timber and equipped with drying and finishing facilities are unquestionably making large profits, the average mill buying its logs in the open market—a market where for many months demand has exceeded supply—is not making any huge fortune but a modest return on invested capital. At the present with logs costing the manufacturer \$20.00 per M with operating expenses very little short of \$14.00, it is questionable if the average mill can show a higher average selling price than \$36.00 to \$37.00. This refers strictly to the average mill. There are exceptions, of course, as above noted, but even under the most favorable conditions I do not believe there is a mill on the Coast that can show an average selling price of \$40.00 per M. It is a fact that the wide margin between actual manufacturing costs and average selling price—

supposed to exist—exists only in the imagination of the individual who is unacquainted with the real facts.

The Pulling Power of Ready Cash

Under such conditions it is easy to understand the preference which the American buyer has received over his Eastern competitor in the purchase of B. C. lumber. The former comes to the mill with cash in his hand ready to pay the full amount of invoice as soon as shipping papers are turned over to him. The mill man has to pay cash for his logs, has semi-monthly payrolls to meet and the money looks good to him. He needs it in his business and he takes it because he must have it. The Easterner, on the other hand, insists on 2 per cent. thirty days, or 60 days net, in a considerable number of cases, or a more protracted period between the time the mill man parts with his lumber and receives the wherewithal to carry on. Formerly when logs could be bought on time, financing was a simple matter, but these days money talks if anything louder than ever before in the lumber industry. Even at a better price the long term payments on Eastern business puts it out of the reach of the average mill man of limited financial carrying capacity. And so we approach the "lumber famine year."

Veteran Sawmill Machinery Inventor Expires

The man, who invented the circular saw portable mill now largely used in rural lumber operations in many parts of Canada and especially in the East, died recently in Southampton, Ont. His name is James Blanchfield Smith and he had attained the advanced age of 90 years. Mr. Smith was an outstanding character in the pioneer history of Canada and an inventor of more than local note. He invented the sectional turbine water wheel, and other devices, which he sold to the Waterous Co. of Brantford, and for years was engaged with this company setting up mills throughout Ontario. Among local points mills were set up by him at Owen Sound, Allenford, Chesley, Port Elgin, Durham, Walkerton, Colpoys Bay and Denny's Mill on the Saguenay river. In 1862 Mr. Smith made his first move to the Southampton district. He walked from Durham to Walkerton, where he spent the night in the Thompson log hut, the only one there, going on to Southampton next day with his gun and his pack on his back. At Southampton he secured a guide to take him to the Sauble river, where he surveyed a block of timbered land for Dr. Hamilton of Hamilton. The government at Ottawa granted a patent to the land which was then purchased by Dr. Hamilton, and Mr. Smith then built a sawmill, which he operated for four years, and brought the lumber by boat to Southampton. Later Mr. Smith bought seven hundred acres of timbered land in Amabel township, west of Hepworth. He erected a mill there which he later sold and then went to Michigan, where he was engaged in millwrighting for the Western Lumber Co. and the Perry Lumber Co. of Manistique, Mich. In 1884 he returned with his family to Southampton where he purchased the Angus mill. This was later burned and Mr. Smith then retired, settling on the north side of the Saugeen river, where he resided up to the time of his death. Two daughters and three sons survive him as well as a number of grandchildren.

The late Mr. Smith was a splendid type of manhood, being six foot two inches in height with a powerful frame, and had an alert mind as well. His antecedents came to America in 1606, and settled in the New England States. They followed the business of building sawmills, grist mills and woollen mills, and as settlers filled up the country, they kept working further into the then wilderness of forest. When a new settlement was started the Smiths were there to build the mills and place the machinery in them. Mathew Smith, the grandfather of the deceased, worked at millwrighting throughout New York State, and he and his son Ezra crossed the Niagara frontier at Buffalo in punts carrying their tools with them, and built mills on the Niagara river and along Lake Erie, and settled at Chippewa Creek.

A hideous house not only stands as monument to the crudeness of those who brought it into being, but it exercises a continual malevolent influence upon those who live within its environment. Build attractive homes, regardless of their size or cost.

Why Lumber is Commanding Higher Prices

Manufacturers Costs Have Doubled, Labor is Exacting, Transportation Rates Increase, Abnormal Demand and More Capital Than Ever Required

The question of the prevailing prices in the lumber industry has been one of interest. It is not now our intention to enter into a dissertation on the points involved for the situation is abnormal, and no amount of discussion would solve the abnormal questions which confront the industry, says the "Retail Lumberman."

Dealers everywhere are anticipating a great building boom this spring and summer, which doubtless will surpass that of any other year in the history of the industry provided materials may be obtained in quantities. Home builders are going to confront dealers with bills for dwelling houses. Farmers will undoubtedly want prices on barns, sheds and other farm buildings. Contractors are going to ask for material prices. And when they are given these prices, there will be the inevitable inquiry as to the why and the wherefore of the so-called "high prices." It is of supreme interest to them to know why 2 x 4's, which cost 3½ cents a foot in 1918, now costs 6 cents. They will want to know about corresponding increases in other varieties of lumber. There is an answer to these questions.

Increased costs are due to the following causes, says one report: Shortage of labor. The lumberjack and the mill hand in the South and on the Pacific coast had the same grievances as the hired men on the farm a number of years ago. His life was isolated without the comforts and pleasures of the city workers. He worked for 10 cents an hour, eleven hours a day, or about \$30.00 a month. His living quarters were a shack, his bed a bunk, his food coarse. He often got in debt to the company store.

Improved Lot of the Lumberjack

To-day the same worker gets \$3.00 to \$6.00 per day. His food and lodgings cost at least twice the old price. Even then he is not satisfied and manufacturers claim he is only 70 per cent. efficient. Yellow pine comes from the South chiefly, where labor was mainly supplied by negroes and foreigners. During the war these migrated to the industrial centres so that to-day manufacturers have great employment difficulties.

It is estimated that the manufacturers to-day are able to supply only 50 per cent. of the demand in America alone. The outside world is also making an unprecedented demand on our forests. Of 1,552 Russian mills, it is said only forty-two are in operation, and that the great Muscovite timber reserves are in the hands of the Bolsheviks and, therefore, unattainable. In Austria 9,000,000,000 feet of stumpage are said to have been destroyed. On the western front in Europe, 20,000,000 acres of forest were cut down either by shells or for tactical reasons. France and Belgium lost 550,000 homes, while England has contracted for 500,000 new homes, guaranteeing the price to the buyers.

The financial risk in buying in large quantities must be considered in determining present prices. Capital charges have also doubled. For if a carload of 2 x 4's took \$500.00 to handle three years ago, to-day it ties up \$1,000.00.

If the cost of manufacturing lumber has nearly doubled the cost of retail distribution has gone up even more rapidly. Here labor is again the greatest item of expense.

Not every common laborer can load and unload lumber which costs \$1.00 a thousand feet for each operation. The number of skilled laborers required to operate a modern efficient lumber yard would amaze the layman. Retail dealers are reluctant to advance the prices to keep pace with wholesale rates. The lower the price to the home builder the greater will be his volume of sales. He would rather take a small profit on a quick turnover than a long profit on a small volume of business.

Service That the Retailer Renders

The question arises as to whether the buyer can purchase cheaper from the mail order houses. The buyer who cuts the so-called middleman must render for himself the service which the middlemen or retail dealers supply. He must buy in carload quantities which means the tying up of considerable capital. He must hire men, often unskilled, to unload his material from the cars, reload on wagons and again unload on the job. He must take his material at once and not as he needs it. Trucks or teams for the handling of the lumber must also be considered in estimating the cost of lumber purchased in this manner.

On the other hand the retailer is ready to supply one board or a carload to any part of his community. He not only supplies dimension but finish stock as well. If anything is unsatisfactory he can

replace it quickly. If required to furnish additional materials he can do so at a moment's notice. However, to do this he must carry a large stock and bear the expense of rendering the service. Service is never gratuitous and must be added to the original cost of a bill when bought through so-called "cut-rate" channels.

So in summing up the situation we find these facts confronting us as possible causes for the present prices on lumber.

Manufacturers' Costs Have Jumped

The manufacturers' costs have nearly doubled, and because of this increase in production costs the expenses involved in the additional capital necessary are also increased.

More capital is tied up in a car of lumber than before the war. Transportation rates have increased, adding something to the final cost of the finished product.

Labor costs at the retail yard have more than doubled in the past few years.

Because of the increased cost of the product to the retailer there is more capital involved than formerly in a yard stock, which means an added expense to the final cost.

Taxes are higher than ever before.

Customers are demanding more service than they have ever before expected, and in order to supply this demand something must be added to the final cost.

A yellow pine 2 x 4, which sold for 3½ cents a foot several years ago, now sells for 6 cents. If someone should ask the reason why, this may help you to explain.

What Taking an Inventory Involves

The time of the annual inventory is at hand—one of the most disagreeable jobs in a lumber yard. But it has to be done, and, therefore, there is no use putting off the job of preparing for it until the day before. One may think his yard is in pretty good order, but when it comes to counting and measuring every bit of stock in the yard many things will be found out of place, and on a cold day it is not agreeable to have any delay from this cause. It is the proper thing to do, therefore, to begin early to put the whole yard in order, which not only means leveling off the piles and getting the grades together, but also cleaning the rubbish out from the piles; picking up the loose lath and shingles and the short pieces of lumber; sweeping the dust off the stock in the shed as much as possible; cleaning out the lime house, and putting in orderly shape the stock in there. The sash room is usually the most disorderly place in the yard. It is, moreover, the junk house of the yard. Everything is put there that is not desirable to have in the office. Get the sizes of the doors and windows together and plainly mark what they are. Get the dust out from the nooks and corners and off the stock. Don't let the auditor catch you with a dirty sash room. If you have much of a stock of molding, you can expedite the work by counting it all several days beforehand and keeping tab on what goes out in the meantime. It also gives you the chance to clean out your moulding rack.

Many of you won't probably have a very big stock of coal on hand, but what you have level off the bins for the purpose of getting a more accurate count of the cubic feet of coal in them, as the number of cubic feet in a ton is used to make an estimate of the contents of coal in pile.

Found Some Prices Exceedingly Stiff

Ex-Mayor A. R. McDiarmid, of Brandon, Man., who was in Vancouver recently on a business trip, states that while one of the heaviest building seasons in years is planned by the Canadian prairies, unless coast lumber mills can see their way clear to put into effect a considerable reduction in prices there is a serious possibility that they will kill the prairie market. Despite the plans for building now under way, he declares that present high prices will compel those contemplating expenditures in this direction to manage with the buildings they have now until prices show signs of falling off. Mr. McDiarmid is head of a large concern handling lumber products. He pointed out that present prices of lath, for instance, mean that he would have to charge the builder three cents apiece for them and this makes the use of them impossible.

W. C. Irvin
Chairman of Lumbermen's Credit Bureau

J. B. Reid
Treasurer of Lumbermen's Credit Bureau

T. H. Hancock
Member of the Executive Committee

Lumbermen's Credit Bureau Annual

Officers Elected for Coming Year and Tributes Paid to Worth and Work of Organization

The annual meeting of the Lumbermen's Credit Bureau was held on Friday, January 9th, in the Council Chamber of the Board of Trade, Toronto. There was a large attendance of members and the proceedings were marked by general satisfaction with the results secured from the Bureau's services.

Mr. W. C. Irvin, Chairman of the Bureau, presided. The Treasurer's report, which was presented by Mr. J. B. Reid, showed a satisfactory balance in the bank at the end of 1919. The report of the collection department, representing commissions upon accounts collected by the Bureau for members, was presented by the Secretary and adopted.

The election of officers for the year 1920 resulted as follows:—Chairman, Mr. W. C. Irvin; Treasurer, Mr. J. B. Reid; Secretary, Mr. H. Boulton. Committee, Messrs. T. H. Hancock, Wm. Britnell, F. B. McFarren, Walter Sutherland, T. E. Rathbone.

This concluded the routine business of the meeting and the members then took part in a round-table discussion during which practically every member present spoke, all expressing complete satisfaction with the service they had been given by the Bureau during 1919.

Mr. Wm. Britnell, in expressing his approval of the Bureau's service, said that it had lifted the builders' supply business on to an altogether higher plane than it had ever been before.

Mr. Frank Rogers said that if the Bureau were to go out of business to-day his firm would have to go back to the old state of affairs and decline to accept business from any firm or individual who they did not know to be absolutely safe. The Bureau had enabled his firm to more than double its business in supplies. If the Bureau were to make its membership fees four times what they were, his firm would have to pay up and continue as a member.

Mr. Wagstaff said that for many years he had been in the brick business and had lost a large amount of money each year in bad debts. Last year he had joined the Lumbermen's Credit Bureau and was glad to report that 1919 was the first year in which he had been able to close his books on the 31st of December, without showing a single cent lost upon a customer.

All the members who spoke had something similar to say, and after the discussion had continued for over an hour, the meeting was adjourned.

Canada Competitor in Export Lumber Market

"The need of Government intervention of some kind to conserve the waning timber supply stands out as extremely important," says the third annual report of the U.S. Tariff Commission, which has just been issued. It continues: "This is a policy the urgency of which the lumber interests themselves are beginning openly to acknowledge. They appreciate the necessity for conservation not only in the interest of consumers, agriculture, inland navigation, and water power, but also because the problem is one with which private enterprise is powerless to deal without governmental intervention or co-operation."

With reference to the lumber export trade, the Tariff Commission points out that the only country subjecting American producers to serious competition is Canada. "Nevertheless," it says,

"the United States is exporting lumber as well as importing lumber from Canada, and both the United States and Canada export lumber of the same general character to all important markets throughout the world. These facts appear to indicate that costs of production can not be markedly different in the two countries, and that, taken as a whole, producers in the United States are in a position to compete with those of Canada. However, the Canadian frontier is long and in some regions competition is severe."

How The Farmers are Selling Logs

An understanding of the elementary principles of farm forestry will enable the farmer to market his timber far more profitably than is done on the average farm, according to the news service of the Department of Agriculture, Washington, D. C. In the southern states, and in many other sections of the country, high-grade logs of such trees as white oak, yellow poplar, red gum, ash, cherry and black walnut can usually be sold in carload lots direct to manufacturing plants, even though these are located at some distance.

Large quantities of pine are cut and sold by southern farmers for paper pulp wood. Yellow poplar and cottonwood, red gum, tupelo, etc., are used for the same purpose, according to forestry specialists. Pulp wood is sold by the cord and the prices usually range from about \$4 to \$6 for pine and \$5 to \$9 for poplar, cottonwood, etc. Railroad ties have long been a standard farm timber product. As a rule, however, the price represents only fair wages for cutting, hewing and hauling, with little return for the timber itself.

Want More Wooden Vessels to Ship Lumber

Mr. C. E. Huddard, general manager of the Associated Timber Exporters of British Columbia, an organization which controls the export of several big lumber mills on the Coast, is an enthusiastic supporter of the proposition to build wooden sailing vessels to tide over the period of tonnage scarcity. In commenting on the matter he said: "This looks to me like a very wise move. While steam tonnage is the proper thing for lumber carriage, a very great deal of satisfactory business can be handled by sail tonnage. We ought to have at least twenty wooden sailing vessels of an average capacity of 1,000,000 feet of lumber. That added to the steam vessels now being put into commission and in the course of construction for the Canadian Merchant Marine would put British Columbia on a good footing for competition with her only competitor, the United States, for the lumber export business. Until we have sufficient tonnage we are handicapped." He said there was absolutely no limit to the demand for lumber from all parts of the world at present.

Harbor Engineer A. D. Swan, of Montreal, is in Vancouver busily engaged in preparing plans for the new Government double-decked wharf which is to be constructed alongside the present Government dock. As soon as construction is started the harbor commissioners will appoint a local engineer to carry out the harbor improvement scheme. They have already announced that returned men will be given the preference.

The Canadian Pacific Railway have completed plans for another big wharf to be constructed between the two wharves now owned and operated by the company, and it is expected that the two big additions to Vancouver's wharfage will be started almost simultaneously, probably some time in February.

Grading Deals in Ottawa Valley is "Life Job"

System Founded on Old "Quebec Standard" has not Changed for Generations— Experience and Instinct Guide Men in Their Work

Though science, modern invention, and legislation have within the last fifty years changed much in the lumbering industry, there are some things that have not changed in the Ottawa Valley, and one of them is the grading of deals.

The Ottawa Valley, is really in an unique position as to the grading of deals, inasmuch as it relies on what is commonly known as the old "Quebec Standard," which apparently is a legislative gift handed down from generation to generation. Still without anything else to go by a few Ottawa Valley companies manufacture perfectly good deals, which are sold and accepted in England as being quality stocks, according to their grades.

One naturally wonders how such a circumstance is brought about, and about the only visible answer that the "Canada Lumberman" could ascertain, is that the whole question rests with the "graders." Who are the graders? the layman asks naturally enough and in answer he is informed that they are certain employees of the company, who have been with the organization for a great many years, and whose services (though it is not openly stated) can scarcely be dispensed with. When they ask for a raise in salary, the application is usually considered.

"Deal" graders in the Valley are not altogether plentiful. There's a reason. First they come and acquire their qualifications and learn through the natural process of time, pretty much the same as the trees grow in the woods, and secondly they are not usually the product of any educational system, other than that contained in the good old book of nature, and experience.

How System Came About is Mystery

Where the germ for "deal" grading really had its birth so far as the Ottawa Valley is concerned is a question. Even in imagination one must undertake a flight of memory with the possibility of landing back a hundred years or more ago, or at whatever time some person or persons, acquired, devised or bequeathed the fundamental basic principles whereby the old "Quebec Standard" came into being. Certain it is that the present day school of lumbermen had nothing to do with it, with the possible exception of John R. Booth, Sr., and it is still more doubtful if even Mr. Booth today could tell precisely and exactly the real causes and reasons that lead up to the adoption of such a "standard" in the old Quebec lumbering days?

Still Mr. Booth, and W. C. Edwards & Co., are the principal manufacturers of "deals" in the Ottawa Valley, and their deals are made, and graded, and their output sold every year, and accepted as standard stock.

About the closest one can get to the situation is that a grader who has an uncanny accuracy, acquired his knowledge from some other grader older than himself, or its principles have been handed down to him from his predecessors. In some ways it might even be taken as a hereditary gift, or perhaps a providential perpetual art. Nevertheless he is recognized as a "grader," and when he is doing his grading he does not care very much for anybody else's interference or advice. He knows, that he knows his work and to perform it the way he feels it should be performed, is he thinks what he is being paid for. Thus he carries on, and if months afterwards some person on the other side of the Atlantic ocean rejects a deal or so that he has passed, as being a certain quality, the Company usually hears about it but the grader still goes on.

Descends From Father to Son

Deal grading in the Valley appears very much to be a life time occupation, and as reports from the lumber companies indicate, the son learns the business from the father, or if not a son some younger person, faithfully pursues it, until the time of his usefulness with a lumber company expires, or he dies.

Briefly the deals are graded as to quality, pretty much the same as the first, second, third and fourth grades of lumber are. In contrast with some grading rules followed by American lumber companies, the grader in the Ottawa Valley sorts the stock from his own fund of knowledge, rather than following any hard and fast rules or specifications.

The result is to all appearances quite satisfactory as the Valley deals as before mentioned are readily bought and sold, and their standard of quality is usually above question. To find out definitely what is meant by a No. 1 deal, one would have to be a grader or

get a graders' idea of one. So it is for the other standards. Graders during the fall and winter months are very hard individuals to find around a sawmill, as most of them depart for the woods camps after the sawmill season is over.

"There is very little difference of opinion as to a first grade or second grade deal among old graders" commented the head of one of the Valley Lumber Companies. "Through practice or their own experience they know with almost unerring accuracy, just what grade it is, by looking at it. If they are at all doubtful about it being a first quality, they do not hesitate to put it into the second grade, apparently for no other reason than their knowledge tells them it is not A. I. stock."

Lumber Retailer Who Sets Forth Facts

Just why lumber sells for more money to-day than it did formerly is the subject of a terse and timely talk by an alert retail lumber firm in Kansas. The announcement appears in a weekly paper and tells people what they want to know—how, why, when and where. True lumber has gone up in price but not so very much when other commodities are considered. It is pointed out that the chief contributing factors to the present condition of affairs have been a steadily declining production, shortage of labor and an abnormal demand. Read the advt. which needs no further comment.

"Why Lumber is Higher than Formerly"

"We are often asked why lumber is so much higher as compared to a few years ago.

"There are a good many reasons not known to the general public. Why are all other commodities higher?

"Lumber cut of the United States for the past ten years:

	Feet
1909	44,500,000,000
1910	44,000,000,000
1911	43,000,000,000
1912	45,000,000,000
1913	44,000,000,000
1914	40,500,000,000
1915	38,000,000,000
1916	40,000,000,000
1917	37,000,000,000
1918	32,000,000,000
1919 estimated	31,500,000,000

"Why this shortage of production since 1914, especially for the three years, 1914, 1915, 1916? Lack of demand on account of business depression. 1917, 1918 and 1919 Government forced the 8 hour instead of the former 10 hour day. This, in connection with the shortage and inefficiency of labor generally, the production of course is much below normal. There is a big shortage, costing much more to produce than the normal supply did from 1909 to 1916.

"This shortage will continue for a good many years. 90 per cent. of the shortage and advance can be charged up to the high cost of production.

"In order for the average lumber yard or manufacturing concern to keep up their business in the proper way, it will be necessary for them to anticipate their requirements for months in advance. This means that lumber will have to be ordered ahead of time as the supply is not on hand at the mills and will not be for a long time.

"The greatest timber resources of the country are on the Pacific coast.

"Fir, spruce, cedar, western pine, western larch, Idaho white pine, redwood, California white and sugar pine.

"We deal exclusively in the above products. Our different mill connections are the largest in the country, giving us a larger supply to draw from than any other concern in this line of business.—W. L. Blakely Lumber Co."

The live lumber dealer, and every other patriotic business man in every city and town of this land, should do something every day to offset the preachments of that element of our society which at the present time is so steadfastly engaged in preaching to our people the "something for nothing," and "the world owes you a living" line of thought.

Great Revival in Lumber Shipments

Best Showing Made Last Year at Port of Montreal Since 1906—Some Interesting Facts

The figures of the lumber exports from the port of Montreal during last season are of interest as showing a revival of trade in this department after a succession of lean years. They also emphasize the value of the purchases made for British government account. The total of 144,375,182 ft. b.m. is the best showing since 1906, and is an increase of 85,436,163 ft. b.m. over 1918. The great bulk of this was lumber purchased for the British government, and its prompt handling reflects credit on the exporters and the representatives of the British timber buyer, and is also a testimony to the facilities of the port. The latter are naturally capable of improvement, and with the resumption of constructional activities by the Harbour Commissioners, we may expect that additional facilities will be forthcoming.

The war severely affected the export of lumber from the port. The shipments dropped from 106,515,024 ft. b.m. in 1913 to 71,401,401 in 1914, and while the next two years witnessed a substantial recovery 1917 was the worst on record, only 39,429,497 ft. The war period was one of great difficulties for the exporters, who besides the submarine risks, had to contend with an enormous rise in freights. The government, too, commanded space very freely, and trade was therefore carried on under great handicaps.

The liberal purchases by the British Government, although restricting the ordinary commercial activities of the exporters, have proved of benefit to the lumber trade generally. There have of course, been snags in the path of the shipments, but the fact that such a large number of feet have been exported within a very short period is evidence of hustling methods all round.

The port of Quebec, too, did its share in the rapid shipping of government lumber, and the delegates of the Canadian Lumbermen's Association, when they visit the city, will be able to see for themselves the port facilities, and will also doubtless hear something of what can be done in the direction of the rapid handling of lumber for the overseas markets.

Sudbury's Young Lumberman Mayor

Speaking of the newly elected chief magistrate of Sudbury, J. A. Laberge of the Laberge Lumber Co., Limited, the following appreciative tribute is paid him by the Sudbury Star:

Mayor-elect Joseph Alfred Laberge, who will be twenty-seven years of age next month, is the youngest man to yet hold the office. Mayor Morrison was in his twenty-ninth year when he assumed office in 1917 and at that time old residents looked askance at the very thought of so young a man occupying so important an office. It is truly the young man's age so far as Sudbury's mayoralty office is concerned and, judging from the big vote, the electorate is quite content that it should be so.

Joseph Alfred Laberge, mayor-elect, was born in Sudbury in 1892 and is the first native-born to hold the position. He is a son of the well known lumberman and manufacturer, John B. Laberge. He attended Sudbury Separate School and Rigaud College, Quebec, and eleven years ago entered business with his father, some five years ago taking over the management of the Laberge Lumber Co., Limited. He is known in commercial circles as a shrewd business man, one whose time is valuable and one who comes to the point quickly. While he has had no council experience, he was for two years a member of the Board of Health, in one of which he occupied the chairmanship. He has been a member and secretary-treasurer of the Public Library Board, is a director of the Sudbury Club, President of the I. C. F., a Roman Catholic in religion and a Conservative in politics.

How Western Firm Sizes Up Conditions

The Pacific Box Co., Ltd., of Vancouver, B. C., who operate a sawmill, box plant and pail factory, have some interesting observations to present on the present situation and the outlook. The company state that the logger and the lumberman of the West will have an unusually active year in 1920 and that prices are now high and will continue high. They add that they are now shipping box shooks to New York and to Mexico whereas previously they could not quote against American mills for these points, but prices are so high there at present the Vancouver organization can secure business in these fields.

R. W. Sharpe, manager of the company, recently remarked that prices are everywhere too high and that rather than enlarge their plant at the present time—while, he admits, that it might be wise to do so,—they intend to operate two shifts in order to cope with the present abnormal demand.

"Labor will not be cheaper," continues Mr. Sharpe, "and wages

cannot go down and prices up. We will take export business this year in preference to domestic. It will help our country and what helps the country helps us. Regarding 1921 we cannot tell you what will happen. There must be a break sometime as present prices bear too heavily. We do not think there will be any break this year. We are going to make the best possible production during 1920 that it is possible to do with our present equipment, and endeavor to strengthen our financial position and so be prepared for any eventualities that may develop."

Breezy Paragraphs from New Brunswick

Lumber is being shipped out of St. John on a large scale. There were twenty-eight steamers there at a recent date and a number of these will take away many millions of feet for different parts of Europe. Owing to the scarcity of deep water berths some of these are being loaded by lighters in the stream. The lumbermen welcome the changed conditions for it means that the vast majority of the large amount stored on every available inch of ground will be cleared away before the mills resume operations at the opening of navigation on the St. John river and tributaries.

A delegation of lumbermen of New Brunswick met the provincial government recently and urged the establishing of stumpage, and the adoption of a uniform scale for New Brunswick. It was pointed out by the delegation that at the present time there was no stumpage scale laid down for the province. Although the lumbermen did not argue any specified term of years, it was pointed out that in Quebec a rate of \$1.00 had been fixed for five years with an increase of thirty cents for any additional years. No action was taken at the meeting.

The Fraser Companies Ltd. have added another to their list of sawmills in New Brunswick and Quebec, making a total of eleven lumber mills in operation. The latest mill that they acquired is that of the Hammond Lumber Company at Notre Dame du Lac, P. Q., on the Temiscouata Lake, twenty miles north of Edmundston. It is said that the Hammond Lumber Company will erect a new mill a few miles above Kent on the Canadian side of the St. John river.

Although the lumber operators would like a little more snow in the New Brunswick woods reports say they are making very good progress and from the present outlook fully 300,000,000 feet will be cut. It is possible that a new record will be established, although weather conditions will have a lot to do with it. About ten years ago 307,000,000 feet were cut and this stands as a record.

The Miramichi Lumber Company expect to cut about fifteen million feet of lumber on the Tauxes river and tributaries this winter. R. L. Young, the veteran lumberman of Taymouth, has a contract to get out six million feet and from recent reports he is making good progress.

Right to Cut Ties Awarded by Tender

The issuing of permits to cut ties, etc., at a stated rate has been discontinued by Hon. Beniah Bowman, Minister of Lands and Forests, and hereafter rights of this sort will only be given following the submission of tenders regularly advertised for. The change, which was put into effect shortly after the Drury Government took office, resulted at first in some delay to lumbering operations in some places, but this is now being overcome and tenders will shortly be dealt with in regard to several areas put up for sale.

Peter Heenan, Labor member for Kenora, met Hon. Mr. Bowman and members of the Government in reference to the opening of limits. Mr. Heenan, who is something of an authority upon lumbering, flatly contradicted the suggestion conveyed in H. Hartley Dewart's recent letter to Hon. Mr. Bowman that the sale of timber limits at the present time could only benefit those who had prior knowledge that the area was to be put up, since others desiring to bid would not be able during the Winter to have the areas properly cruised and the value of the timber estimated.

"That is absolutely contrary to the fact," said Mr. Heenan. "Timber men could not ask for a better time to cruise these limits than the present when they can travel over bogs and streams that would make work difficult during the summer."

The Kenora member, referring to the area in the Minnetakie district, said that there was not more than sixteen inches of snow on the ground, and that mostly in places where it had drifted. He understood that a permit had been applied for in connection with this area. It had been refused on the ground that the permit system had been discontinued, and the area had then been put up for tender. There was ample time for any lumberman to have the area cruised before putting in a tender.

Quebec City Will be Mecca of the Lumbermen

Great Gathering of the Industry Will Convene in Ancient Capital on February 4th and 5th—Profitable Programme and Many Attractive Features

Everything is in readiness for the twelfth annual convention of the Canadian Lumbermen's Association, which will be held at the Chateau Frontenac, Quebec City, on Wednesday and Thursday, February 4th and 5th. All the arrangements have been completed by the local committee and a hearty welcome is assured all the visitors.

The convention, in many respects, will be the most outstanding and representative ever conducted in the history of the Association, as many leading issues will be discussed and definite action taken on several problems that are now presenting themselves for adjustment. The local committee in Quebec has worked diligently and perfected all plans, and from both a business and social standpoint everything should proceed smoothly and satisfactorily. The programme, as published in the last issue of the "Canada Lumberman," remains unchanged, and every detail will be carried out.

Secretary Frank Hawkins of Ottawa, who has been on the job morning, noon and night for some time, writes to the "Canada Lumberman" as follows:—"Do you know that the twelfth annual convention of the Canadian Lumbermen's Association has shaped up so that it promises to be the best we have ever had. It is for all to work together so that the benefits not merely for the lumber industry but on behalf of the general public may be pronounced and lasting."

In previous issues of the "Canada Lumberman" much has been said respecting the character, work and worth of the Canadian Lumbermen's Association, and the interesting and instructive nature of the proceedings of the forthcoming convention. It is, therefore, not necessary to enlarge upon these features in the present edition except to reiterate that everything points to the most edifying and important gathering in the records of the Canadian lumber trade.

Many of the delegates will be accompanied by their wives, and every arrangement has been made for the entertainment of the fair sex.

In the last issue of the "Canada Lumberman" the portraits of several members of the local (Quebec) reception committee were presented along with leading exponents of the export timber trade in the Ancient Capital. In this edition the pictures of the remaining members of the committee are published as it was not found possible to secure all the photographs in time for the last number.

Every member of the committee deserves much praise for the way he has taken hold of the work. That lumbermen who attend the convention on February 4th and 5th will be amply repaid from every standpoint is making an assertion not only self-evident but one which carries with it weight, wisdom and every promise of fulfillment. Come to the convention and be convinced.

Beautiful beyond compare as Quebec is under all circumstances and at every season of the year, and world-wide as is the fame of her outstanding attractiveness, she is perhaps at no time more unique in her quaint picturesqueness than when the drifted snow envelopes Nature in regal ermine, and the Ice King bedecks her myriads of icy brilliants, scintillating in the sunlight and reflecting like so many diamonds the many colors of the rainbow.

From almost the earliest days of New France, as Canada was originally called, Canadians have given themselves up very largely in the winter season to various species of enjoyments, chiefly in the way of outside sports. In some form or another, the round of festivities and social enjoyments, including skating, sliding, trotting on the ice, snowshoeing, etc., were indulged in by the Canadians of old throughout almost the entire season from the premiere bordee de neige—the first light fall of snow which usually comes about the fete de Ste. Catherine, (St. Catherine's day)—November 25th—until the maple sugaring season in the country districts adjacent to Quebec, in the final month of the winter. The la tire or taffy making of the fete de St. Catherine is still a time-honored Canadian custom, and the popularity of sugaring parties in the woods, on the surface of the snow when the maples are yielding their sap and the boiling liquor poured on the snow crystallizes into a dainty confection, has never waned, but is rather on the increase.

It is rather, however, in the heart of the winter season,—in the weeks that come about half way between St. Catherine's day and the maple sugar season that winter sports are at their heights in Quebec. These have been much added to in recent years, largely by the introduction of ski-ing and the increasing popularity of hockey.

Historically, Quebec is the same, Winter or Summer. There are the same formidable walls with their reminders of bygone days. There are the same frowning cannons, that in the past have belched forth fire and destruction. There are the same picturesque streets and quaint houses with their pointed gables, steep roofs, and off-looking windows. There are the same monuments, the same historical tablets with their reminiscent inscriptions, and there is always present the undeniable impression that nowhere on the whole Continent of America is there a city that so calls up a picture of mediaeval Europe as Old Quebec.

The Chateau Frontenac has its gayest season just at the time when winter sport is at its height and there the twelfth annual convention of the Canadian Lumbermen's Association will be held on Wednesday and Thursday, February 4 and 5. The lumbermen will be given the entree to all public places in Quebec and every facility for sightseeing will be placed at their disposal.

Sawmill at Newcastle Most Complete

The Plant of James Robinson Represents the Last Word in Equipment, Convenience and Operation

The new sawmill, which has been erected by James Robinson at Newcastle, N. B., represents one of the best and most complete undertakings of its kind in the Dominion. The appointments and facilities have all been carefully planned with a view to easy production and maximum output. The lumber sawn is spruce, hemlock, white pine and Princess or Jack pine, and is distributed throughout the yards by live rolls. The output per day is about 65,000 ft. and employment is given to some eighty-five hands.

The plans for the mill were drawn by Mr. James T. Sullivan, who also looked after the construction of the plant and is now the foreman in charge. Newcastle is a thriving town and the work of erecting the mill was carried out during the season of 1918-19.

Mr. Robinson the proprietor, is one of the best-known operators

be greatly improved in its horse power capacity. A new Corliss engine is being built to replace the present engine, which is a little too light for the heavy work that it is required to perform. The new engine will be of 900 horse power rating, and will be especially constructed by the manufacturers for this mill.

When these changes are all completed the mill will be able to handle its full capacity with ease.

The mills annually begin operations about the first of April and usually continue well into November. Last fall owing to the early freeze up the saw mills closed about Nov. 4th. The annual cut is about 65 millions. The planer mills operate the year round and shipping is continuous. Recently over 65 million feet was in the yards but this will be reduced very considerably before sawing operations start in the spring. The improvements that are now under way will entail an expenditure of over \$100,000 and will employ a gang of millwrights and others working steadily until spring.

With the almost certain heavy demand that will be made for lumber the Shevlin-Clarke Co. are preparing to supply their share of the product and Fort Frances and vicinity will share in the benefit of the large outlay of money. The company are recognized leaders in efficiency and up-to-date milling methods.

Sell Shingles by Square After April 1st

A new system of selling shingles "by the square" instead of by the thousand has been adopted by the B. C. Shingle Manufacturers' Association, and will go into effect on April 1. It will be accepted by all shingle mills which are members of the Association, but some of the smaller mills may not fall in line. This innovation follows the action of shingle manufacturers in the Pacific coast states. It is taken because manufacturers concluded that they were at a disadvantage in competing with makers of roofing, because the latter sell by the square foot. On a basis of an exposure of 4½ inches to the weather, a thousand shingles will cover 112 square feet, whereas it is believed the average consumer thinks a thousand shingles covers a hundred square feet only and thus estimates the cost higher than it actually is. Under the new plan, every bundle of shingles will be marked with the roof area it will cover, and buyers will order so many square feet instead of so many thousands.

Live Lumber Concern Holds Convention

Every angle of interest to lumber salesmen was approached and discussed thoroughly at a meeting of The Long-Bell Lumber Company's salesmen in Kansas City, Mo. January 6, 7 and 8. Salesmen, mill managers and men from the general offices took part in the program and in the discussions which followed each talk.

The meeting was opened with a talk by Mr. R. A. Long, who welcomed the salesmen and spoke enthusiastically of salesmanship and of the necessity of thoroughness in every day work.

"We have noticed successful men about us," Mr. Long said, "and sometimes we have wondered what could be the secret of their success. The fact is that they concentrated on their work; that they bent every effort to accomplish their tasks, other men, perhaps just as competent, were not willing to pay the price; men who did not believe they could get as much enjoyment out of life in spending so much time over their work. Maybe not—but it is my thought that the man who gets the most out of life is the man who puts the most into it."

Mr. Long remained through practically all of the sessions taking part in the discussions and in making suggestions for better service between the mills and the retail dealer. The various addresses and discussions were bright, pointed and inspiring and the conference productive of much help and benefit.

Old Rates Have Been Restored

The Railway Board, on the application of the Riordon Sales Company, Limited, has suspended tariff No. 9-B, covering rates to become effective January 15 on wood pulp to Tacoma and Seattle for export. The effect is to restore the old rates. Much evidence of a very technical kind was heard in the case. It appears that the Canadian Freight Association asked for a withdrawal of these rates because the United States Railway Administration declined to publish rates over which they have no control in the United States. Representatives of New York shipping houses, who were present to ask that the rates to Seattle and Tacoma via the Canadian railways be maintained, learned that their trouble was really due to the action of the United States Railway Administration.

The successful lumber dealer used to depend largely on his shrewdness to keep in the game. Today he depends on his intelligence.

The well-equipped sawmill of James Robinson, Newcastle, N.B.

on Miramichi River, and has long been identified with the industry. He owns timber limits, which cover many miles, along the Southwest, Northwest and Bartibogue streams—all branches of the Miramichi.

The location is on the North side of the Miramichi river and is an ideal place for the manufacture of lumber, having a 300 yd. wharf frontage on the South of the property, while on the North it is bounded by the C. N. Ry., a branch of which is extended right to the mill. There is also a large boom for holding logs and the general surroundings are such as seem designed by nature for an undertaking of this character.

It may be said that the main building of the mill which is a two storey structure is 200 ft. by 40 ft., and on the South side there is a lath and wood-room 24 by 65 ft. The filing room at the top is 54 by 40 ft. On the North side is the engine room 24 by 35 ft.; in which are installed a 250 horse power Waterous engine, a 200 horse power Stearns engine, with large feed pumps and all the fittings necessary to make up a well-equipped engine room.

The boiler house and furnace, twenty feet from the mill, is constructed of brick and iron, and contains four boilers, each 66 inch return tubular 18 feet long. The boilers were built by the Robb Engineering Co.

The equipment of the mill consists of one Stearns Band Mill, with Waterous carriage and steam feed, steam loader and Kendal nigger, one H-6 Yates band resaw, two Hamilton 4 saw edgers, slashers, lath machines, two saw trimmer, round saw, resaw and five wood cutting machines, Hamilton hog, and all the fittings that make a first-class sawmill.

Big Improvement to Shevlin-Clarke Plant

Extensive improvements and alterations are being made to the sawmills of the Shevlin-Clarke Lumber Co. at Fort Frances, Ont. The planing mill is being equipped with a number of additional machines to take care of the growing demand for the finished product of the mills. The present engine room is being removed, additional equipment being installed. The present engine is of 400 horse power, while the new one, which is taking its place, will be of 620 horse power capacity, and sufficient to handle the planing machinery under full load. Two new boilers are also being put in position.

The company own and operate two sawmills, and the combined output of both is over half a million feet a day. No. 1 mill will

Radical Reforms to Check Timber Wastage

Exportation and Exploitation of Canada's Natural Wealth Cannot Forever Continue

—Dominion Can Learn from Sad Neglect of Other Countries

The time has now fully arrived when an embargo or export duty should be placed on the large amount of fee land wood that is being shipped across the line from the principal pulpwood producing provinces of Quebec, Ontario and New Brunswick.

These provinces now have enormous investments in pulp and paper mills which are increasing in number every year, and it seems incomprehensible that the owners and security holders of these splendid monuments to Canadian industry and brains should longer sit idly by and allow this steady stream of raw material to slip away from their very mill doors. The consumption of pulpwood in Canada has reached such enormous proportions that a halt should be called in such suicidal policy.—F. J. D. Barnjum, Annapolis Royal, N. S.

The wood resources of Canada have been so grossly exaggerated that very few are aware how meagre our supply of available wood really is. I have spent a large portion of the past few years in a personal investigation of the Canadian situation, the results of which are so alarming that I have refrained from publishing my findings, says Frank J. D. Barnjum of Annapolis Royal, N. S.

The theory of an annual growth that has been indulged in so freely in the past has simply become a popular delusion. There is, of course, a gross growth, and a net growth under some conditions, but to offset this the annual wastage by fire, wind, insects and fungi, taking the country as a whole, far over-runs the gross growth. Consequently we are simply consuming our capital year after year.

If anyone has any question as to the enormous amount of this wastage, let him explore the woods of Ontario, Quebec and New Brunswick, where one can travel day after day and see nearly everywhere the vast destruction caused by the spruce bud worm alone. There are millions of acres in these provinces where over fifty per cent. of the standing pulpwood has been completely destroyed.

To emphasize this question of growth, it is only necessary to refer to the recent reports on the growth in some sections of Quebec, which show only about 30 board feet per acre, meaning about one 6 inch tree per acre per year. It has never been disputed that there is no actual accretion in virgin timber as the mortality more than offsets all growth. Furthermore, even in cut-over land when one realizes that it is only necessary to have an average of one ordinary sized tree per acre per year blown down, how easy it is to see that the annual growth is wiped out by this one process of destruction. I have seen thousands of acres laid flat by wind, not only in cut-over lands but also in so-called virgin stands. So much for wind.

Now with regard to losses from forest fires, the spruce bud worm, borers and fungi. The figures are so appalling that I dare not commit the result of my findings to print, but these losses are so enormous that no one who is sincere will attempt to deny that they far over-balance any annual growth that there is in Canada or the United States. Cut out this mythical annual growth theory and what are we doing? As I said before, we are simply using up our capital.

One often sees the statement in print that we are "using more than three times our annual growth," while in fact, as previously stated, there is no annual growth to use, for the reason that enemies of the forest cited above, destroy much more than the growth.

The timberland owner has the satisfaction of knowing that even if he has lost one half of his standing timber, by the ravages of the spruce bud worm, still what he has left is worth double the previous price per cord, as the destruction is country wide, and the consequently diminished supply will necessarily create an immediate and substantial advance in land and stumpage prices.

Logging by Aeroplane—Not Yet

If some of the paper mills of the United States had not gone so far afield for their wood last year by invading the more remote sections of Ontario and Quebec, where the freight alone amounted to \$16.00 or more per cord and accepted wood down to a diameter

limit of one and one half to two inches, they would be short of wood to-day.

In some of the wild estimates of our supply of standing timber made in the past, they have simply taken the map of Canada, determined the number of square miles, and arbitrarily figured so many cords per acre. Now as logging by aeroplane has not been perfected as yet, there are only two ways you can get out wood, namely, by river or railroad. About all the more important rivers of Canada have been logged on and driven, from the very earliest days. Many of them have been practically stripped or cut out, while others are being operated pretty well back to their head waters, so far remote that it takes two years or more to drive logs to the mills.

In the case of the railroads the condition is pretty much the same with the exception of possibly the Transcontinental, but inasmuch as this road was built beyond the height of land, there is very little wood available north of this road, as the rivers all drain away from it towards Hudson Bay. This leaves only the territory that lies south of the railroad, but as sawmills are springing up along this line, like mushrooms over night, and as fire is taking a heavy toll in this section, the paper mills will derive only a small supply from this source. Every time a railroad is built in a wooded country, more wood is burned up than is hauled out.

When talk is made about obtaining pulpwood from the cold northern sections that have not been opened up, where it takes 150 years to grow a four inch tree, where the snow falls to a depth of 15 feet and the thermometer registers 50 below zero, it will be only when pulpwood has reached a price more than \$75.00 per cord. We hear Alaska suggested as a possible field for the making of paper, but all of the above handicaps apply to this section, except along the coast, as well as the fact that it is 4000 miles distant from the large paper consuming market.

What Pulpwood Exportation Signifies

All anyone needs to know is that in the United States more than 5,500,000 cords of wood are used annually for pulp alone, in order to realize that this appalling shrinkage in our capital stock of standing timber must necessarily all too soon wipe out the remaining supply.

I want the reader to pause a moment when he reads this paragraph, five million five hundred thousand cords—not feet, but cords, used every year in the United States for pulp, and principally in the Eastern and Middle States. Few can realize just what this really represents, but to try and make this comprehensible, it means a solid pile of four foot wood, twelve feet high reaching clear across the continent, or a pile four feet high, nine thousand miles long, and yet we may travel for days on the railroads and hardly see a spruce tree. Personally I should not want to take the contract to furnish this amount for even one year, and where is it to come from after the next ten years?

Imagination can hardly grasp the real significance of the terrifying estimate of the annual consumption of all wood products in the United States, namely 244 million cords. Even this estimate of consumption is doubtless conservative, as it is impossible for the Government to obtain complete reports of actual production.

In addition to this enormous amount that is being cut, fire is taking a terrible toll as well. Over a billion feet of timber was destroyed this present year in just one State—Montana. This means two million cords or just one half the entire amount consumed for pulp in one year, destroyed by the fire fiend in one state. Last year the same thing happened in Minnesota, and this same thing has been going on since this country was first settled and to such an extent that 75 per cent. of the original stand of timber has been destroyed by this same cause, and yet some authorities will still talk of an annual growth.

It is a curious fact that some of the coldest sections are the most prone to fire, such as Newfoundland, British Columbia, Northern Ontario, Northern Quebec, Minnesota, Alaska, etc. These fire zones are just as well defined as land and water.

How Timberlands Have Gone Up

In an article which I wrote three years ago when the publishers were complaining of 2¼ cents paper, I then stated that the question

of the future would be not one of price, but of obtaining paper at any price.

That prediction has already proved only too true in a much shorter time than I anticipated.

I have devoted the past 28 years to the study of the one subject of timberlands and wood supply, and during this period I have seen lands go from \$1 to \$15, \$20 and up as high as \$50 per acre for the same lands; and stumpage go for \$1.50 for a mark of logs that only took 4 to the thousand, to a price of \$20 per 1000 for a mark of 12 to the thousand; pulpwood from a low price of four dollars to a high of thirty-two dollars per cord, and spruce lumber from a low of twelve to a high of sixty dollars per thousand. Stumpage in New Brunswick even has been sold as high as \$15 per thousand during the present year.

In 1890 they were cutting trees that took not more than six or seven to make a thousand feet of lumber, while to-day they are cutting to such a small diameter limit that in many sections it takes 40 trees to make a thousand feet.

An Active Official in Lumber Arena

Paul G. Owen, Quebec, P.Q.

Paul G. Owen, the energetic secretary of the local committee of lumbermen, Quebec City, who have conducted the arrangements for the twelfth annual meeting of the Canadian Lumbermen's Association which will be held in the Ancient Capital on February 4 and 5, is well known to the lumbering interests of the province by reason of his long association and intimate acquaintance not only with the men in the trade but also their problems, work and expansion.

Mr. Owen, who was born in Liverpool, England, came to Quebec when he was twenty-one years of age, after having been five years as an apprentice of the timber trade with Carter, Tyrer & Parker, Liverpool. He was with Price Bros. & Co., Quebec until 1887 and then became Sec-

retary-Treasurer of the Province of Quebec Limit Holders' Association, with headquarters at 56 St. Peter St., Quebec. The character and standing of the Limit Holders' Association needs no extended reference, as its work and worth are widely known. Mr. Owen is also Honorary Secretary of the Quebec Forest Protective Association Limited, Secretary-Treasurer of the Laurentian Forest Protective Association Limited, and also holds a similar office with the Southern St. Lawrence Forest Protective Association. He is prominently identified with club, society and church work in the Ancient Capital and resides at 108 St. Augustine St., Quebec.

Owing to the excellent carrying out of all details by the local committee of Quebec City under the chairmanship of Sir Wm. Price and secretary P. G. Owen, the success of the forthcoming convention in the Capital City of the province is assured.

Personal Paragraphs of Interest

W. E. Bigwood of Graves, Bigwood and Co., Toronto, spent a few days recently in Kansas City, Mo., on business.

Mr. Givens of the Export Association of Canada, whose headquarters are in Montreal, was in Toronto recently, calling upon the lumber trade.

C. W. Wilkinson of the Union Lumber Co., Toronto, intends leaving shortly on a winter holiday trip to Cuba and other points in the South.

Geo. W. Grier, President of G. A. Grier & Sons, Ltd., wholesale lumberman, has been elected a member of the Council of the Montreal Board of Trade.

T. G. Hall, of Hall Bros., Ltd., wholesale lumbermen, Toronto, has been spending the past few weeks on a business trip to Vancouver and other points in the West.

A. E. Clark of Toronto, who is a member of the Board of Directors of the National Hardwood Lumber Association, was in Chicago recently attending an important meeting of the Board.

Sir George Bury, president of Whalen Pulp & Paper Mills, Vancouver, was in Toronto for a few days. He recently returned

from an extended business trip to Japan where he thoroughly enquired into the possibilities of the export of sulphite pulp to the Flowery Kingdom. Sir George reports many business openings for Canadians in that land, and having placed a large contract for the output of the plants of the company.

Leon Gagne, Jr., of the Exchange Lumber Company, Montreal, has been on a business trip to the Abitibi district, P. Q.

A. E. Gordon of Terry & Gordon, Toronto, sailed on January 21st from St. John, N.B., on the Empress of France for Great Britain, where he will spend several weeks on business looking into the general export situation and supervising the foreign interests of the firm.

Leonard Painter, a former newspaper man, has been added to the staff of Paul E. Kendall, advertising manager of The Long-Bell Lumber Company, Kansas City, Md. Mr. Painter only recently returned from France, where he served ten months as a first sergeant in a corps ammunition train. His organization went through the Chateau Thierry and Argonne offensives. Mr. Painter was at Saumur Artillery School, qualifying for a lieutenantancy, when the armistice was signed.

Thos. McGeachie, who was stricken with paralysis, died recently in Welland, Ont., while walking along the street. He was 63 years of age and was a native of St. Catharines. The late Mr. McGeachie had followed the lumber business nearly all his life and was widely known. He had resided in Welland for the past eighteen months, and is survived by his wife, five sons and one daughter. Mr. McGeachie was a man of splendid character and made many friends in his comparatively short residence in Welland.

Mr. Colin C. Tyrer, of the Colin Tyrer Lumber Co., of Halifax, Nova Scotia, who has been on business on this side, paid us a pleasant call this week. He reports that the outlook of the spruce market is somewhat precarious, owing to the large stocks held by the Government being offered at lower prices than recent imports. For next year f.o.b. prices of spruce are not likely to be reduced, but freights are already somewhat easier.—Timber Trades Journal, London, Eng.

F. H. Whittet, of Montreal, who has been connected with the Riordon Pulp & Paper Company, Limited, for the past eleven years, is now a director, secretary and treasurer of the company. In addition to his position with the Riordon Pulp & Paper Co., Mr. Whittet is secretary-treasurer and a director of the Rouge River Improvement Co., the Rouge Boom Co., Ticonderoga Pulp & Paper Co., Riordon Sales Co., and the Kipawa Co., Limited, who are erecting a six million dollar plant (the largest pulp and paper plant in America) at Temiskaming, which will be in operation the latter part of this year.

J. E. Tucker, chairman of the Board of Directors of the Vancouver Lumber Co., Vancouver, died recently in Bakersville, California. Some years ago he retired from active participation in the company, although always taking an active interest in its affairs. He was seized with a paralytic stroke when travelling by automobile from Los Angeles and expired a few days later. The late Mr. Tucker spent all his life in the lumber business and, at the outset of his career, operated in the Yellow Pine district, Texas. Fifteen years ago he came to Vancouver and established the company of which he was so prominently associated. E. C. Knight, managing director of the company, is a son-in-law of the deceased and went South to be present at the funeral.

Wm. Henderson of Toronto, superintendent of the Shantymen's Christian Association, recently returned from an extended trip in the interests of the work in Michigan and Wisconsin, and British Columbia. He also paid a visit lately to the Maritime Provinces and reports that the Shantymen's Christian Association has begun work in the lumber camps of New Brunswick and Nova Scotia. In the West good progress is being made by the three missionaries who are laboring in British Columbia, and it is expected by next summer that a boat will be purchased for the convenience of the men in visiting the different camps. In Ontario at the present time there are some twelve missionaries working under the auspices of the Shantymen's Christian Association, calling at the various lumber, mining and construction camps in the province and conducting religious services.

Last Month of Year Good for Building

December building permits indicate an unusual activity, showing an appreciable margin over November, says the American Contractor in its last issue. The report for 185 U.S. cities gives permits issued to the value of \$152,774,755, against \$149,643,956 in November as the record for 193 cities. This record is all the more striking as December is usually marked by a decided recession in building activity. August was the peak month of 1919 in the issuance of building permits.

The Essentials of Good Lumber Advertising

Why Certain Kinds of Publicity Have Brought Small Returns — Have Something Definite to Say and to Offer in Retailing Your Stock

More lumber dealers have tried the advertising game during the past year, than during any previous year. The germ of intensified merchandising has spread fast and furiously.

It is the safest bet in the world to state that the large majority of those dealers who have made an honest attempt at using publicity as a part of their operating effort this year, are highly pleased with the attempt.

But it seems best, just at this time, to address a few pointed remarks to the fellow who has tried advertising—or rather who thinks he has—and has found that it “doesn’t pay.”

The dealer who says he has tried advertising and has not found it a paying investment, comes generally under one of the following heads:

He has used space in his local paper simply to support the paper; or—

He has used newspaper space and left it to the editor to “Get me up something nice and attractive;” or—

He has tried writing his own advertising, and depended on a conglomeration of words to attract attention without considering the real aim and purpose of a real ad; or—

He has made statements in his advertising space that were not of a constructive character; and—

He has decided from one cause or another, that his advertising has not paid because it has not brought results.

In one case he is right. It has not paid. But the reason why it has not paid is because it was not advertising! That’s the answer.

Let’s go right back to the beginning (the only sensible place to start a beginner). We have told you a thousand times over that the fundamental necessity of successful advertising is to advertise something that will appeal to the other fellow by touching on a point that offers him something that concerns him, arouses his interest and arrests his attention.

Appeal to the Other Fellow’s Needs

Your advertising must aim to help him, not to help you, if it is to pay. The fact that you need his business, doesn’t appeal to him in the least, and if you are going to advertise with that thought in mind, you had better come right out flat-footed, be honest and above board, and say in your advertisement:—

“I am a good fellow, and trying to prosper in the lumber business, and I need your help to do so; let’s get together.”

That would bring better results than a whole lot of attempts at advertising which aim only at your desire, and not at the other fellow’s good.

Get the thought out of your head that to be a successful advertiser you must be a trickster on words. Not at all.

The entire story is that to be a successful advertiser you must successfully appeal to the other fellow’s needs and desires primarily.

While every local situation has its local conditions to contend with, the fact remains that there are mighty few places where advertising cannot be made to pay—big.

So, let’s try briefly to discover a better viewpoint for the next effort of the fellow who has tried advertising and found it “doesn’t pay.”

First, a don’t or so. For the love of Mike quit using those old-timey expressions that Capt. John Smith slapped an Indian for telling in the time of Pocahontas. Don’t say that,—“Our stock is large and well assorted, and our prices always the lowest.” If you can’t think of a more interesting thing than that to say about your business, either you have some mighty poor thinking machinery, or you are in a mighty poor business. Tie a can to everything of the same line.

Now, the first essential of a good ad, is something good to advertise; something that will appeal to the other fellow.

Pick Out What Your Trade Desires

If you are going to claim in your ad that you have bargains for the other fellow, have those bargains. Don’t let there be any doubt about that. Be sure that your merchandise is just as good as your ad.

If you have no special merchandise, no special bargains, then advertise some special service. But when you do be dogged on certain you have that service and are prepared to deliver it.

And if you haven’t either one go get some. Don’t try to adver-

tise your entire inventory. Pick out something special that your trade needs at this time and land on it like a ton of brick.

The next time you write an ad, sit down to do it with the big thought in the front of your head, that what you are trying to accomplish is to give some information in that ad concerning your business that will appeal to the reader’s desire for possession.

One of the greatest bars to proper advertising, is stinginess. There are a world of men who would give advertising a whirl, and enjoy the mental effort, if they didn’t so hate to loosen up on their dollars. Remember that advertising—the kind we are talking about—is an investment, and like any other investment, the dollars have to be transferred for the commodity before returns can possibly come.

The business man who watches all the other advertising business men in the world depending upon their advertising as the vital fluid of their success, who sees that other men depend upon their advertising to keep their business wheels turning; who sees the live advertisers forging ahead, and the non-advertisers pushed to the wall; who sees, as he must see, that to the successful merchant and business man of to-day advertising is the one thing that cannot be done without; and who still says that—“Advertising doesn’t pay”—must have something radically wrong with him, or a mighty poor opinion of the business he is in, as compared with all other lines of business.—J. C. Dionne in the “Gulf Coast Lumberman.”

What Would You Do With This Wholesaler?

A letter recently received from a sash and door manufacturer, of which the following is the substance, shows that he is in something of a predicament. He says:—

“We have bought several hundred thousand feet of lumber from a certain wholesaler. We got in one car of the lumber from him of which about two-thirds of the car was below grade. We have a very competent grader who has been borne up in his grade by Association Inspectors. We immediately took the matter up with the wholesaler and he wrote us that we were technical on grade and practically told us that we would have to take the car as he invoiced it or his mills would not ship any more to us. There has been an advance of about \$10.00 a M on the 200 or 300 M feet we have ordered from this man and we naturally would not want the order cancelled. We wrote him telling him that we would want to have an Association Inspector go over this car and he advised us that he would not consent to it as he does not want a technical Association Inspector to go over his stock. We, of course, would expect to pay for the inspection if we were wrong, and we so wrote this wholesaler—he to pay the costs if he was in the wrong. He advises that he will not pay anything for an inspection and we could have the stock gone over at our expense, but he would not abide by the inspection if we did.”

It can be plainly seen that the buyer is in a difficult position. If he has the lumber inspected and if his claim is borne out by the official grade, the wholesaler will refuse to settle on that basis, and unless the lumber is accepted and paid for on the grades the wholesaler says he shipped, he will refuse to ship the balance of the order.

We would advise the following course, says the “Mississippi Valley Lumberman:—

If the wholesaler is a responsible business man, and the facts are as you have stated, you can compel him to ship the balance of the order and furnish the grades you bought. Even though you may have no written acceptance of the order, the fact that he has shipped a part of it, is an acknowledgment that he has contracted to fill the entire order.

If you bought certain grades, the understanding being that they should be such grades as are recognized as standard in the kind of wood bought, the seller must deliver such grades as interpreted by an official inspection. If he still refuses to ship the balance of the order, you can buy that much lumber of the desired grades at the current market price and sue him for the difference.

The case can be handled in another way.

You can withhold payment for the car you have received and wait until he has shipped the remainder of the order. Then have the whole amount inspected by an association inspector and pay him on the basis of the price at time of purchase for the grades developed by the inspection.

Lumbermen Speak on Price Situation

**There is No Indication of Any Weakening for Many Months—
The Scarcity of B.C. Stuff.**

"I do not know where prices are going to," remarked a leading sales manager. "Many of the mills are asking more for their cut for the coming season than we are obtaining just now for the lumber that we have in hand. We are not looking around for stocks at present quotations, and are determined that we will not pay any such figure as is being called for at this juncture. However, we are fortified in one respect in that we have several million feet of lumber on hand and are not forced into the market. Perhaps other concerns will have to enter, and if they want stock at all, they will have to meet the prevailing figure."

Some large purchases in birch have been reported during the past few days one Ontario firm having bought 6,000,000 ft. in the province of Quebec, taking the entire product of the log.

There is practically very little stock from British Columbia coming in. One Eastern sales representative of a large B. C. mill, which turns out 75,000,000 ft. during the year, stated that an inventory of stock was mailed him recently. There was only a little over 1,000,000 ft. which was in shipping condition and was not covered by orders. Before the document had arrived by post, a wire was received from the mill that 650,000 ft. had been sold through the Chicago office of the firm since the list was despatched."

Continuing, the speaker said: "In other words, before we had even received the list, the big bulk of the stock was already disposed of, and I presume that practically the entire balance will be sold by the time that we are able to secure an order here. Generally speaking, conditions point the same way as at the end of last month, stocks are low and are decreasing in spite of the best efforts of the manufacturers to build them up. Shingles are firm at eight dollars and twenty-five cents, with only a few orders being placed. Cedar logs are high and scarce, and there is no indication of a price weakening in this line. Timber inquiries are numerous with none of the mills in a position to take on the business offered. A few sales of rough clears are reported, but the supply is very limited. As soon as the odds and ends which the mills listed for sale after inventories are disposed of, I believe that the situation will be even tighter than heretofore."

In a letter recently distributed to the Eastern trade, a leading western firm states that the demand is daily increasing, and stocks, owing to the decreased production on account of log shortage, are gradually decreasing in spite of the best efforts of the manufacturers to build them up.

"We are met with a contention among some dealers that prices are too high. Possibly there is some vestige of truth in the statement, but the fact remains that the advance in lumber has not been disproportionate to that in other lines. Dealers must have stock and there is absolutely no indication that there will be any weakening in prices before many months; in fact it seems to us that the tendency will likely remain upward and with stocks the lowest that they have been in the history of the industry, it is apparent that they will be harder to obtain in thirty days than at the present time. There is only one logical conclusion on which can be drawn after a survey of the conditions prevailing to-day and that is—buy now.

Material listed on enclosed sheet is subject to prior sale. If interested in any items please wire your orders at our expense.

Buying Lumber for Needs in Montreal

"The most acute condition of house starvation and overcrowding that I have come across I found the other day when staying in Detroit, where many families are actually living in box cars, tents and other similar places and where even schools have been emptied in order that families can be accommodated in them," observed Mr. James H. Maher, a prominent Montreal builder, who was recently in Vancouver. One reason, he explained, of this housing shortage in Detroit was the fact that the population had been greatly augmented, practically upon war work during the great struggle that had just closed. "I could easily have got a contract to put up a thousand houses there," he exclaimed, "but it was impossible to get the necessary material."

Mr. Maher, who put up 300 houses in Buffalo a few years ago has contracted for a few carloads of lumber from the Coast for his Montreal operations, but he finds that so much lumber is being exported from the province overseas and to the United States, and the cost of transportation east is so high—\$21 a thousand feet, he explained—that he will have to rely on Quebec lumber in the main. There they have lots of spruce, hemlock and pine, but not in the long lengths the builders would like and their hemlock, he said, is not of the fine quality grown out west. Conditions in Montreal, he stated, are very good just now, but labor is difficult to get.

An Aggressive Leader in Organization

The unanimous election of A. C. Manbert, president of the Canadian General Lumber Co., Toronto, as chairman of the Wholesale Lumber Dealers' Association, Incorporated, for the coming year, is a tribute to the worth and work of an able and aggressive member of the whole-sale ranks. Mr. Manbert succeeds Mr. A. E. Clark, who has been chairman for the past two years, and it is generally conceded that Mr. Clark showed organizing ability, foresight, discretion and skill of a high order to carry the new-born organization through two successful years and wind up with such a satisfactory showing in every department, as the recent annual meeting revealed. Under the direction of Mr. Manbert there is no doubt that this representative and wide-awake body will continue in its widening career of usefulness and importance. The regular monthly meetings are becoming more and more helpful, owing to the live wire topics discussed and the heartiness and enthusiasm which characterizes the proceedings. Practically all the members take part in the discussion and many new viewpoints are effectively brought out.

Mr. Manbert has long been a staunch advocate of the value and benefit of trade associations and has spoken on this interesting theme on numerous occasions. He has always believed in organization, and done whatever possible to advance the interests and welfare of any federation with which he has been identified.

At a recent business conference when a talk on "Salesmanship" was being given, one of the tenets laid down by the noted speaker was that the salesman had to "sell himself first," or, in other words, be convinced of the soundness, fairness and practical advantage of his own proposition before he could interest others. Assuming this observation applies with equal aptness and point to organization, Mr. Manbert will make a progressive chairman, for he has always believed in the purpose and plan of trade movements and co-operation. He will now be more closely linked up to his ideas and ideals than ever by reason of the new distinction conferred upon him.

Want Special Duty on Maple Lifted

Attention was lately called to the fact that 10 per cent. duty had been levied at ports of entry upon certain cars of maple which had been recently shipped to the United States by an Ontario wholesale lumberman. The interpretation of the special clause under which this wood came, was that it ranked as a "cabinet wood" and the special wording in the U. S. customs tariff was to the effect that birch and maple being classified as cabinet woods, could be charged 10 per cent. If such a clause exists, it has been a dead letter until recently.

This matter was brought up at the last meeting of the Wholesale Lumber Dealers' Association in Toronto when the secretary was instructed to write the Department of Customs at Ottawa and the Department of Customs at Washington, submitting the question to them with a view to having maple and birch admitted free.

The following reply has been received from Washington, which is not very satisfactory in its interpretation of the situation:—

The Wholesale Lumber Dealers' Association, Inc.,
Toronto, Canada.
Gentlemen,—

The Department is in receipt of your letter of the 30th ultimo, requesting information as to the classification of hardwoods, especially birch and maple imported into the United States from Canada.

You are advised that birch lumber is not classified as a cabinet wood, but that maple lumber not further manufactured than sawed is now classified as a cabinet wood, dutiable at 10 per centum ad valorem under paragraph 169.

Under paragraph N, Section 111, of the act of October 3, 1913, the importers, if dissatisfied with the action of the Collector in the assessment of duty, may file a protest in writing with the Collector within 30 days after the liquidation of the entry, supported by a fee of \$1.00.

Respectfully,
(Sgd.) Geo. W. Ashworth,
Chief, Division of Customs.

It is the intention to discuss this matter further at the annual meeting of the Canadian Lumbermen's Association, which will be held in Quebec on February 4th and 5th and take definite action therefrom. It may be stated that the great shipments of maple and birch from Canada to the United States are not used for cabinet-making at all but for flooring, trim, automobile construction, etc.

The Beaver (Alberta) Lumber Ltd., Winnipeg, Man., have been incorporated to conduct a timber, lumber and milling business in all its branches. Capital \$300,000. D. R. McCann and H. Spencer, solicitors, Winnipeg, are two of the incorporators.

Retail Dealers Will Assemble in Hamilton

Live Topics Will be Discussed at Annual Gathering in Ambitious City on February 24 and 25—Two Days' Session Will Close with Big Banquet

Arrangements are rapidly being completed for the annual convention of the Ontario Retail Lumber Dealers Association, which will be held at the Royal Connaught Hotel, Hamilton, on Tuesday and Wednesday February 24th and 25th.

The Hamilton lumbermen are uniting whole-heartedly to insure a warm welcome for the visitors, and replies have been received by Secretary Boulton from all parts of the province indicating that the attendance will be unusually large and representative. The social features will also be worth while and the Hamilton retailers will entertain all the delegates to a dinner. Secretary Boulton was in Hamilton recently conferring with President Thomas Patterson in regard to the programme which will be drafted in a few days. Many important matters will come up for consideration, and as the convention lasts two days, there will be ample time afforded for discussion and the presentation of important topics which, heretofore, had to be eliminated owing to the brief nature of the session. It is believed that the two days' assembly will prove more profitable, interesting and instructive than any that the retail trade has ever held.

The membership of the Association is increasing rapidly owing to the recent aggressive campaign which has been conducted by the present members. The reports of the past year will show financially and numerically and in the matter of practical results the O.R.L.D.A. has justified its inception and enjoyed two years of success and expansion.

Proceedings of the Gathering

At ten o'clock on the morning of Tuesday, February 24, there will be a meeting of the directors of the Ontario Retail Lumber Dealers' Association while the forenoon will be devoted to the reception of the delegates, registration, etc.

In the afternoon at 2 o'clock the business sessions will open when President Patterson will deliver his annual address. The reports of the Secretary-Treasurer as well as the different permanent committees will be presented. There will also be appointed the various committees who will carry out such work during the convention as may be in hand. In the evening there will likely be a theatre party.

The second day will be devoted largely to discussion and suggestions on many important matters. Secretary Boulton has sent out to the members a list of subjects which will likely be taken up and among them are:

An Association Traffic Department—Shall we establish a traffic department to deal with members' transportation difficulties, such as claims for overcharges, classification problems, freight rates, etc.?

Standard Order Form—Shall the Association endeavor to draw up a form for use by members, when placing orders with wholesalers and manufacturers, so that there will be no doubt about the binding nature of the order and the obligations which it places upon both the buyer and the seller?

Standard Sizes—Shall we adopt standard sizes for mill work? What standards do you suggest as most suitable?

Standard Grading of Lumber—Shall the Association prepare standard grading rules for the chief lines of soft woods?

Quotations and Deliveries—Shall we induce a practice of requiring a customer to accept a quotation within 10 days and take delivery of the entire list of items within 30 days? This is a suggestion submitted by one of our members who believes that prices should be subject to revision if the customer cannot take delivery within 30 days.

Workmen's Compensation—How is the act working out in connection with your business? Are there any features about it that you would like the Association to take up?

Mechanics' Lien Act—What features about the present act do you think should be changed, and how? We are urging the Legislature to introduce a new Mechanics' Lien Act and want all the practical suggestions you can give us on this subject.

Standard Moulding Patterns—Would you like to have the Association adopt a definite set of moulding patterns? Let us have your reasons in full.

Business Assessment Act—Have you any suggestions to make regarding its application to your business?

Local Associations—Is there a good chance to start a local Association in your district? These Local Associations are a great factor in making the general Association useful to individual members. There should be one in every district of the Province.

Trade Relations with Wholesalers and Manufacturers—How can we make our influence most effective for the promotion of fair business methods between the retailers and other branches of the trade? We have done a lot along this line and can do much more. It is a problem of making our combined influence effective when seeking our rights, and playing the game fairly, when the other man's rights and our interests happen to clash. Give this subject a lot of thought and tell us your opinion.

The dinner and entertainment, which will be tendered by the lumbermen of Hamilton to all the delegates will be held at the Royal Connaught hotel on the evening of the second day, Wednesday, February 25. All the members of the Wholesale Lumber Dealers' Association Inc., of Toronto, will be extended an invitation as well as the visiting retailers. There will be a splendid programme of speech, song and music.

Among those who have been asked to speak are General L. C. Boyle of Washington, counsel of the National Retail Lumber Dealers' Association, and C. A. Bowen of Detroit, secretary of that organization, both of whom are able and convincing talkers and have been heard with profit and delight at many similar gatherings.

Some interesting street scenes in Hamilton's commercial and financial district

Hamilton Will Extend "Glad Hand"

Many Attractions Offered in Way of Busy Plants, Lovely Views and Excellent Accommodation

By C. W. Kirkpatrick, Industrial Commissioner

A warm welcome awaits the members of the Ontario Retail Lumber Dealers' Association when they come to Hamilton for their annual convention at the Royal Connaught Hotel on Tuesday and Wednesday, February 24th and 25th, although it is to be regretted that the convention was not set for a day during the spring or summer months, when the delegates would be able to see the city to better advantage. However, the local lumber dealers may be depended upon to make up in the warmth of their hospitality for any chilliness that there may be in the atmosphere outside, and when the convention is over, the delegates will undoubtedly carry away with them very kindly recollections of their visit to the Ambitious City.

Hamilton has all of the attributes that go to making an ideal convention city. Not the least of these is convention headquarters, located right in the city's new million dollar hotel, the Royal Connaught, which makes it most convenient for visiting delegates, the majority of whom stop at this hotel. In addition, the city's transportation facilities are of the best and winter or summer it is possible to get to and from the various points of interest with little or no difficulty. The street railway lines reach all parts of the city, while four lines of suburban electric railway tap the surrounding country in all directions. The city's steam railway facilities are also such that it is an easy matter to get to and from all points on the Canadian railway lines with the least possible delay.

Many Busy Industries—Largest Woodworking Plant

There are many things of interest for visiting delegates to see in and about Hamilton during the hours that they are not in attendance at the convention sessions. It is one of the chief industrial cities of Canada, and it has many industries that are well worth a visit. All told, it is the home of upwards of 500 factories, including the largest factory in Canada for the manufacture of wood-working machinery.

It has been claimed, and the claim has yet to be questioned, that there is more American capital invested in Hamilton than in

The Convention Hotel—King Street East, Hamilton, showing the Royal Connaught Hotel in the foreground

any other Canadian city, and that is not at all surprising when it is remembered that the Canadian plants of such large concerns as the International Harvester Co., the Westinghouse Co., the Firestone Tire & Rubber Co. and many others are located here.

Visitors will be surprised at the amount of industrial building going on during the usually slack winter months in the North East section of the city, where the majority of the factories are located.

During the past year Hamilton added thirty-two new industries, representing a capitalization of over \$15,000,000, to its already long list, and the buildings that will house the majority of these are now in the course of construction.

Local Lumbermen Had Splendid Year

The lumber industry has always been an important one in Hamilton, but never more important than at the present time. All of the lumbermen, both wholesale and retail, had in 1919 the biggest year in their history, but the outlook for 1920 indicates that this year will surpass its predecessor.

If there is one thing Hamiltonians are more proud of than another, it is their Mountain. This point of interest is worthy of a visit, even though the breezes may not be so balmy or the scenery so beautiful as during the summer months. A view from the Hamilton Mountain out over the City and Harbour, with Lake Ontario in the background, and also over the Niagara fruit belt to the east and the Dundas valley to the west, certainly justifies the pride of native Hamiltonians. On a very clear day one can see, with the naked eye, the outlines of the spires and smokestacks in Toronto, which is 40 miles distant.

For those that enjoy indoor amusements during winter time, Hamilton has a hockey arena, two indoor skating rinks, 17 theatres and moving-picture houses and many other forms of amusement. It is a city of 110,000 population with all of the desirable features of the larger cities and none of the undesirable features of the smaller communities. To be up to the standard of the city itself, the Lumbermen's Convention will have to be a "humdinger."

Joseph Oliver of the Oliver Lumber Co., Toronto, and Mrs. Oliver will leave in the near future to spend a few weeks in Florida.

James Street, Hamilton, looking north from Main Street

"Building Specialists"---Not "Lumber Dealers"

What Future Will Develop in Way of Service, Plans, Displays and Specialization in the Creation of Larger Business for the Yard-Man

A crying need of the retail lumber industry for 1920, is rapid conversion of its followers from "Lumber Dealers" to "Building Specialists." The world has come to look upon expert retailers of various commodities, as people who are specialists in their particular line, who anticipate the needs of the trade, arrange to supply them to the complete satisfaction of the purchasers, and who are prepared at all times to create business in their particular lines by intelligently displaying what they have to offer. It goes without saying that the quality and attractiveness of such displaying and selling has much to do with the popularity of the merchant, and with the volume of his business.

It's a fact that the public at large knows without hesitation, just which merchants carry the best stocks, display them to the best advantage, and thereby hold prominent places in the regard of the shopper?

Isn't it a fact that the clothing man, the shoe man, the tailor, the furniture dealer, the jeweler, and scores of other merchants who sell the commodities that are dear to the regard of the average human, would starve to death if he operated his store on the same plan which is followed by the average lumber merchant?

What would you think of a clothing man who took you down a back street somewhere in the mud, introduced you to a few stacks of perfectly unattractive raw material; sat you down in a dingy office that was unsightly to an extreme degree, and which reflected and advertised no business on earth;—and then wasn't even prepared to show you in any shape or manner how a suit would look on you—wasn't prepared—Lord help us—to even make the suit for you; was prepared only to sell you the rawest of raw material that gave you absolutely no idea on earth how it would look when ready to wear?

Yet that is the way the retail lumber dealer used to do business, exclusively. That is the way the majority of them are operating to-day.

Four Distinct Points for the Yardman

The rest of the five merchants of the world recognize that there are rules of modern business which apply alike to them all; that what is sauce for the goose, is sauce for the gander—and vice versa.

They recognize the first four salient and fundamental obligations of a merchant seeking to serve the public, as follows:

First.—To secure and arrange an attractive place of business, that will properly dignify the goods they sell, and provide a welcome to the business visitor.

Second.—To anticipate the necessities and the desires of the public in the stocking of the establishment.

Third.—To properly advertise and exploit his store and his goods so that those whose trade he is interested in securing will have his business brought pleasingly and frequently before their eyes and their minds.

Fourth.—To render such complete, thorough, and intelligent service in the displaying, selling, and delivering of the goods, as to improve the impression that an attractive store, a satisfying stock, and pleasing publicity, has already created.

Those, kind friends, are the four original, fundamental principles of the modern merchant, which are recognized as indispensable to success.

The average retail lumber merchant fails in only four of these—just four.

As compared with the business places of other merchants his place of business is unsightly and impossible. He equips himself with raw lumber, cement, paint, and other building materials, and when a would-be purchaser comes along, he quotes him on this raw material at so much a thousand feet, or a sack, or a gallon, regardless of what the buyer wants it for, or is going to build. Thus he fails in the first two essentials.

Statistics show that he is the poorest advertiser of all merchants, so he has failed in the third particular, also. He was hopeless in

this particular to begin, for having failed in the first two, he has nothing to advertise.

In the fourth particular he also fails. He cannot furnish service, when "service" means nothing but the prompt delivery of raw materials to a designated spot. With the average country lumber dealer it does not mean even that, because the customer, having decided that he wants to build, and figured out his material bill, has to come and get the stuff and haul it home.

So the retail lumberman fails utterly—the old fashioned, unimproved retail lumberman, understand—in the first four prime essentials of the successful merchant.

We raised our voice years ago in protest against the old order of retail lumber merchandising. Many changes have taken place since that time. Thousands of dealers in this good land of ours have turned right-about-face since then, and are doing splendid work along lines of modern building merchandising.

But the best of these has not yet reached the state of mind that the average of them all must reach, before the building business comes into its own.

Rendering Alert Service is Sadly Needed

The consumer is King, and until the lumber industry reaches that stage of development which provides the consumer the same service in buildings that he gets from the tailor, the clothier, the furniture man, and the automobile man—we will continue to preach "Better Merchandising," and to point out the way that the lumberman must go to reach his business salvation.

We can go down town, and in attractive, interesting luxurious stores, we can buy our rugs, our stoves, our furniture, our fixtures, our clothing, shoes, hats, groceries, meat, jewelry, automobiles, etc. We can go to such stores, and see for ourselves what we are going to get; select from an assortment our choice of patterns, and materials.

But if we are considering a home—that dearest of all human possessions;—or if we want to improve our home, remodel it, enlarge it, modernize it, etc., there is no such opportunity left open for us. We can go to an architect and get a plan—and have to guess what the house will be like; we can go to the lumber yard—and be tickled to death when we can get away from it—and buy the building material; we can go to the painter, and the fixture man, and to the contractor. When we get through, we feel that we have been through a train wreck.

There is no one we can go to for a modern, low priced, step saving, attractive home, unless we are fortunate enough to live in a town where there is a real building merchant.

If we want a library built into our home—there is no one we can turn the job over to who will take the thing off our shoulders and deliver the completed article for a reasonable price. We can go to an architect, of course, and hire his services, but the expense is prohibitive to the average person.

We are barred from the same service in building that we get in any other line, simply because the lumber dealer is not a merchant, and the other fellow is.

Facilities for Selecting Future Homes

But the day is coming, friends of ours, when the man or woman who wants building service, will be able to go down town, on a paved street, enter an attractive store, be shown building pictures, building plans, building ideas, building improvements, building materials in their finished state, building colors, etc. We will be able to select our home there, contract for it there, arrange the finances there, select our finish from samples there, see and know just how it is going to look without leaving that store.

Then the building business will emerge from its ungainly swaddling clothes, and take rank as it rightfully should.

They will be able to walk into that same store, select a built-in bookcase, or a sleeping porch, from scores of attractive pictures and plans, arrange for it there, and for a fixed price have it built right on your old home, and delivered finished and ready for use.

Heaven send the day, for the modern man and woman do not deserve to be confined to the bleak and dreary lumber yard for their building ideas and service.—Gulf Coast Lumberman.

The New Shingle Sales Basis

The new square, in place of the per thousand basis, for marketing red cedar shingles is to be generally adopted in the West Coast territory April 1 as the result of action at the Annual Red Cedar Shingle Congress held in Seattle, U. S., early last month, and completed arrangements and resolutions at a special meeting of the shingle branch of the West Coast Lumbermen's Association held December 30.

It was decided by resolution to pack 16-inch shingles $4\frac{1}{2}$ inches to the weather, four bundles two courses to the bunch for a standard covering for 100 square feet of surface. It was the unanimous decision of the meeting to endeavor to hold the pack true to form, that there be no complaint among Eastern consumers as to shortage of surface covered. Estimates offered by Secretary J. S. Williams and President E. C. Miller, of Aberdeen, were to the effect that the pack designated would run over the space named. It was regarded as vital that there be no shortage of pack if red cedar shingles are to go into active competition with patent roofing, which was the outstanding note of the entire campaign.

President Miller called for statements of fact and experiences in changing over from the perennial per thousand to the square basis from the floor. Representation of 150 manufacturers from Washington, Oregon and British Columbia was of such a character that practically every angle of the project outlined, and the action that followed, it was felt, was a step of wisdom and economy.

Salesmen from Kansas City and contractors and builders who had been invited to attend, gave expression as to the feasibility of the new move, but all coincided with the resolutions and the former action at the congress.

Secretary J. S. Williams reported that he had acted at the congress as a result of questionnaires. He stated that he had previously sent these queries for and against substituting the square for the per thousand basis of packing and marketing to 900 retail yards, extending from ocean to ocean and from British Columbia to the Gulf of Mexico. Ninety per cent of the replies, he said, favored the change. Mr. Williams reported that as soon as the news of the action at the December congress reached the outside through the lumber trade journals he received an urgent letter from a big buyer at Toledo, Ohio, approving the act and urging its adoption at the earliest possible.

Manufacturers present said they had already anticipated uniform action on the change, and were now attaching stickers to the bundles for the information of consumers as to how to lay the shingles most economically to cover a given surface. The Jamison Lumber and Shingle Co., of Everett, pioneering this feature, submitted stickers which read as follows at the right of the trade mark:

"This bunch contains sufficient red cedar shingles to properly cover:

"25 sq. ft. laid 4 in. to the weather.

"29 sq. ft. $4\frac{1}{2}$ in. laid to the weather.

"Wet the shingles thoroughly before laying. Use 3d. zinc-clad nails. Leave $\frac{1}{4}$ " space between shingles. Use two nails for each shingle about 6" from butt and $\frac{3}{4}$ " from sides. Break all joints at least $1\frac{1}{2}$ " on each three consecutive courses.

It was pointed out by numerous speakers from the floor and by the chair that the square basis was suggested by the retail trade and did not originate with the manufacturers. It was earnestly urged that some plan was essential, if competition with patent roofing trade was to be maintained on an equality, at once be instituted. Speakers said that in selling argument for shingles the retailer talked in Greek to the consumer because of inability to make it clear how much surface 1,000 shingles would cover. The change, it was stated, would equip the retailer to talk in "patent roofing" terms, easily understood by any builder or investor.

Ontario Cannot Interfere in This Matter

While the Ontario Government has always made certain regulations with which purchasers of pulpwood limits have had to comply, these restrictions do not permit of interference with the subsequent business and trade of a pulp and paper company, once the initial terms of the contract are met. Under such conditions the Provincial authorities have no means of going to the support of the Dominion Government in compelling the Fort Frances Pulp & Paper Company to supply Western newspapers with newsprint, as ordered by Paper Controller R. A. Pringle, Ottawa.

It has been customary in years gone by for the Government to draft certain regulations which must be complied with by those tendering for pulpwood berths. Usually the terms are that all pulpwood taken off Crown lands must be refined in this country, and not exported to the United States in a raw state, that a certain minimum quantity of paper must be manufactured within a stated number of years, and that so many men must be employed after a named date.

The timber limit has then been leased for a period of 21 years, and once the aforementioned general terms are complied with the Department of Lands and Forests has no further control over the manufacturing company. Trade and commerce restrictions, it is pointed out, are matters for which the Dominion Government is responsible.

B. C. Lumbermen Have Record Business

"The past year has been a period of prosperity in the lumber business. I am expecting my department to show a revenue \$600,000 greater by the end of the year than we calculated upon in the estimates."

Thus did Hon. T. D. Pattullo, Minister of Lands for British Columbia, sum up the year's work in his department in a recent statement.

Figures of the forest revenue calculated up to the end of September were quoted to bear out the minister's claim for a bumper year in the timber department as follows:

For year ending Sept., 1916	\$1,851,000
For year ending Sept., 1917	2,094,000
For year ending Sept., 1918	2,172,000
For year ending Sept., 1919	2,735,000

"A great deal of the increased revenue," stated Hon. Mr. Pattullo, "is due to closer administration of the law, and to amending the war relief legislation so as to limit its benefits to arrears only, except in the case of soldiers. Thus, for instances, for the 56 million feet cut in the summer of 1916 from crown timber sales the revenue was only \$87,561. For a cut of 108 million feet from crown timber sales this summer, we have a revenue of \$271,407, or in other words we got over three times the revenue from less than twice the quantity of timber.

"Revenue from timber royalty last year came to \$831,000, or nearly double the \$440,000 revenue of three years ago.

"We are co-operating at every point with the lumber industry by means of joint committees composed of lumber operators and forestry officials, to discuss scaling, log exports, market extensions and any questions which arise. We have a trade extension office in Toronto with a trade commissioner in charge. As a result of the visit of the commissioner to England before the close of the war, our lumbermen received an order for 700 million feet of lumber," concluded Hon. Mr. Pattullo.

The Wayagamack Co. Looks Ahead

The financial statement of the Wayagamack Pulp and Paper Company for the year ended November 30 last showed profits of \$1,103,687, an increase of \$45,945. After making provision for depreciation, bond interest charges, and writing off stumpage allowance,—(\$172,100) there remained a balance of \$551,587. With the previous year's surplus, amounting to \$908,060,—added to the net result of the 1919 operations, there was \$1,459,648 to be disposed of and from this sum, there was deducted \$500,000, which was transferred to general reserve, leaving the amount to be carried forward into the current year's profit and loss account \$956,648 against \$908,060 in 1918 and \$864,023 in 1917. The timber limits are valued at \$5,890,925. The president states that looking to the future the directors have acquired additional timber limits. The Gaspé Limits, 451 square miles; and the Portneuf Limits, near the Saguenay River, 484 square miles.

The Selling End is Paramount

It will pay handsomely any retail lumberman to devote 90 per cent. of his time, energy, and capabilities to the selling department of his business, and that includes efficient, creative, and trade pulling publicity and the selling of a service of value.

The retailer who masters with any great degree of efficiency, the selling end of his business, will find his earned profits increasing and his competition constantly decreasing. It will be found that when a sale is properly made, credits and collections cease to be a problem, and the lien law rights are seldom, if ever, thought of or employed. It will also be found that the percentage of cost of doing business will be satisfactory, and a lesser per cent. than formerly.

There is no department of the retail building material business as pregnant with wonderful profitable possibilities as is the selling department.

Timely Topics for the Sawmill Operator

New Timber Limit Brings High Price

Mr. George Farlinger has been awarded the right of cutting timber on the Minnetakie Lake limit, tenders for which were closed recently. This is the limit that gained prominence when the Ontario Liberal Leader, Mr. H. Hartley Dewart, K.C., protested in a letter to the Hon. Beniah Bowman, Minister of Lands and Forests for Ontario, that it had not been properly advertised, and that it could not be cruised at this time of the year. Mr. Dewart's assertions were subsequently denied by Mr. P. Heenan, the Labor member for Kenora, in whose locality the Minnetakie limit is situated.

There are between 15 and 20 square miles in the limit, and it was stated that the tender of Mr. Farlinger was unusually high, as compared with the prices received for other limits which have been disposed of in recent months. Mr. Farlinger has been cutting timber on the adjoining limit.

The prices quoted by Mr. Farlinger in his tender were: \$2 dues, plus a bonus of \$7.75 per thousand for spruce; \$2 dues, plus \$19.50 per thousand for white pine; \$2 dues, plus \$10.75 per thousand for red pine; \$2 dues, plus \$7.75 per thousand for jack pine; 5c dues, plus 17½ cents each for ties; 40 cents dues, plus 75 cents a cord for spruce for pulp; 20 cents dues, plus 25 cents a cord for other pulp woods such as balsam, poplar, etc., and 25 cents dues, plus 3 cents a cord for all other rough timber.

How Johnson Lumber Stamper Works

Lumber may be just lumber assorted into different grades, but give it a trade-mark—use care in grading and teach the user to look for that trade-mark when buying, and you will have created an asset which has a big market value. The Johnson lumber stamper is a simple device, to be attached to the two-saw or automatic trimmer for the purpose of stamping boards with some letter or design that will identify that particular board later. Each plank or board is stamped or trade marked after it passes the butting machine. This machine is built to last, and its simplicity is such that it never gets out of order or fails to deliver the service expected. The machine consists, primarily, of a spring-operated stamping hammer, placed on the same side of the trimmer as the butting saw, but just behind it; a revolving shaft, carrying two engaging and disengaging clutches, and an operating trigger. The operating trigger is hinged to the trimmer timbers, just beyond the butting saw. As the trimmed plank, carried along by the chains, strikes the trigger, the latter is moved forward with it. This movement engages the operating mechanism below the trimmer table, at once compressing and releasing the hammer die smartly into the trimmed end of the passing plank. The blow is powerful enough to drive the die 1-32nd to 1-16th of an inch, depending on the hardness of the stock one is cutting. As long as the trigger is held down by the plank passing above it, the device is arranged to continue to strike a blow for every 4 in. forward movement of the trimmer chains. Thus every board more than 4 in. wide will receive more than one impression, according to its width. This speed of stamping can be increased or diminished as desired. The action of the Johnson lumber stamper is not only automatic, but absolutely positive—every board that passes the trimmer being clearly and evenly marked so that all may read. There are no skips in this work, and there is no extra handling—the boards are not held up in any way while the stamping is done. The machine is made by the Waterous Engine Works Co., Ltd., Brantford, Ontario.

Where Term "Profiteer" is Mis-applied

On the subject of profiteering in the lumber business Hon. John Henry Kirby, of Houston, Texas, President of the National Lumber Manufacturers' Association, said in New Orleans, La., recently:—

Who is a profiteer? Is he one who has profited, because of general conditions, more than his neighbors? If he is, could this not have been made possible by conditions induced by favorable physical situation, volume of production, careful planning as to the future, and the operation of natural laws?

Where the relation of supply and demand is such that supply is inadequate to meet demand, will not natural laws operate to permit the highest cost production in industry to function at a profit? When this occurs will not the lowest cost production make what could be said to be unusual profits, and might this not be construed to be profiteering? As a matter of fact, if this were not the case, the highest cost production could not function, and the public would be unable

to secure supplies necessary to its well-being. Further, the high price of a commodity has a tendency to curtail non-essential consumption and permit essential requirements to be provided for. When non-essential consumption has been curtailed and production has been increased to more than necessary to fill the essential requirement, the tendency will be to cause reduced values, which will be followed by wage reductions and subsequent reductions in costs. So it will be with the lumber industry. The costs of production range, in the South, by reason of density and quality of timber, topography of country, quantity of production, proximity to consuming markets and labor supply, from \$16.00 to \$42.00 per M. It naturally follows if the production of \$42.00 operations is necessary to fill the world requirements, the price must be such as will permit them to operate. When that occurs, such price will permit the \$16.00 production to earn a profit of \$26.00 per M., which might be termed abnormal profit. As it is with industry so it is with labor. Can labor be properly said to be profiteering? Labor is referred to in its broader sense and not to organized labor. Wages like values are dependent on supply and demand, living conditions and inflation of money. High wages like high values are not necessarily remunerative. Costs of living absorb increased wages, while costs of production absorb increased values. Every man is confident that his neighbor is profiteering, while he is convinced that he is not doing so himself. He possesses an intimate knowledge of his own activities and knows nothing of those of his neighbor.

The term "profiteer" is a term which was coined with malicious intent to mislead an already misguided and befooled public and to inflame radical elements of the public against those who might be recipients of "abnormal profits" due to "abnormal conditions." It is an effort which was conceived in iniquity and may be born in destruction. It is an effort to array those who do not possess property against those who do. The people should realize that those who are seeking to fool them have, through the graduated income and excess profits tax scales, been careful to absorb all abnormal profits and still encourage the goose to lay golden eggs to provide for further governmental extravagance.

Relative Durability of Fir Ties

Before the preservative treatment of ties was practised as extensively as at present, the railroad companies using Douglas fir ties held the opinion that the Douglas fir grown in the Rocky Mountains was more durable than that grown on the Pacific Coast. In some of the copper and lead mines in the Rocky Mountains the mountain fir was also considered more durable.

No authentic records are available where coast and mountain fir ties are set in the same locality. Such service records as there are, however, fail to show that the mountain fir has superior lasting qualities. In some instances the mountain fir and in others the coast fir has proved more durable.

Botanically there is no difference in Douglas fir according to the locality in which it grows. Tests made by the Forest Products Laboratory, Madison, Wis., indicate that Pacific Coast fir is on the average somewhat denser and, therefore, stronger and harder than mountain fir. However, the parts of coast timber usually cut into ties are boxed hearts or wood cut near the piths or from the tops of trees. These are the poorer parts, and coast fir ties therefore generally contain no better wood than mountain fir ties.

The conclusion of the laboratory is that there is practically no difference in the durability of Douglas fir ties cut in the mountains and those cut along the Pacific Coast. It has been observed, though, that the latter receive preservative treatment a little more readily than the former.

Timber Dues Will be Increased

Premier Drury said recently in an address that he anticipated an increase in the revenue of the province of Ontario from timber dues. This, however, turns out to be little more than a matter of routine. The tariff of timber dues is fixed in ten-year periods, and it happens that the period of the present tariff expires April 1, 1920. That there will be a general upward revision of dues goes without saying, but it is not anticipated there will be any drastic increase, though the present and prospective condition of the lumber market seems to justify something substantial.

Canada's Lumber from National Viewpoint

Alleged Inexhaustibility of Forest Wealth is Myth—How Growth May be Speeded and Present Possessions of Dominion Conserved for Future

With the world facing an actual paper famine at the present time, Canada's actual lumber resources are daily attracting greater attention from other nations, especially from the neighboring republic, which, having wantonly slaughtered the bulk of her eastern forests, is turning her eye upon the resources lying north of the boundary line. Pulp companies in Canada are enjoying the greatest prosperity, and, on account of the depreciation in Canadian dollar values, United States investors are purchasing large blocks of stock in these concerns, so large indeed, that it is quite possible that control of our big mills will pass into United States hands.

Should such be the case, influential Canadians are wondering whether Canadian forests would be as ruthlessly massacred as those of the United States have been in the past few decades. Men of big business, and not merely the pulp business, are beginning to view Canada's forests from the national view point and the subject of forest conservation is becoming a topic of general conversation.

A new angle on the magnitude of our forest areas as wealth producers is advanced by Henry K. Wicksteed, Chief Engineer of the Surveys of the C.N.R., father of the Georgian Bay Canal scheme, and one of Canada's personalities in the opening up of new territory during the past few decades. Discussing the question of forestry from the viewpoints of production and conservation, Mr. Wicksteed stated that forest products are the one tangible asset to-day in an area comprising fully two-thirds of that part of Canada which lies within the Temperate zone. In other words, the forest crop is potentially the greatest in the Dominion, and as such worthy of as much care as is given any other important crop.

Emphasizing the fact that the alleged inexhaustibility of Canada's forests is a veritable myth, Mr. Wicksteed states that the great forests of his youth are gone, never to return. In the race to convert trees into gold, more timber has been wasted and burned than utilized. The best of the white pine has gone, together with the white cedar and tamarac—all slow growing trees, which take the better part of a century to replace. The Douglas fir and cedars of the Pacific slope still remain, as does the abundant spruce in the north country and the hitherto scorned poplar, birch and balsam. These, with proper care, he asserts, can not only be made to last for centuries, but to increase in value with coming generations, at the same time yielding excellent returns.

Slaughter or Conservation—Which?

Two alternatives face the lumber and pulp companies at the present time: The first, the slaughtering of their limits, which would double their existing output for a short while; the second, which is based on conservation, will result in a diminished annual yield and immediately higher prices for lumber, pulpwood and newsprint. Having almost unrivalled resources, Mr. Wicksteed suggests that Canada is in a position to dictate prices to the outside world and so make conservation both possible and profitable.

What is most needed at the present time is the inauguration of a system which will virtually make the forests perennial, giving a steady and sustained yield. This, it is estimated, will take some four decades if nature is assisted by scientific reforestation, or sixty years if she take her own course. The bull should literally be taken by the horns at the present time, in his opinion, for once the move is made, there is likely to be little difficulty in carrying it out.

This opinion is based on the fact that the first year of conservation will be the worst for the pulp companies, and each succeeding year will be accompanied by a slightly increased yield, until the ideal of conservationists is reached in the next generation, when timber lands will not only return their present yield, but quadruple the average crop now reaped. This high return could then be maintained in perpetuity. Those in control of the pulp industry, he states, are fully aware of the eventual benefits of conservation, and would consequently be likely to lend a friendly ear to all serious suggestions.

The crux of the whole matter in Mr. Wicksteed's opinion lies in Ottawa. The Dominion of Canada actually owns by far the greater bulk of forest lands, many of the great timber limits being operated now under lease from the Crown. Companies owning their own limits in fee simple are avowedly anxious to perpetuate their productive powers as long as possible, but find it impossible to compete with other concerns which are slaughtering leased land. They feel

that it is up to the Government to take action, as that body is the only one capable of handling the problem in its entirety. For one thing, the time necessary to replant areas makes it almost impossible for private capital to handle it, whereas a perpetual body such as the Government could take the matter over and handle it profitably.

The question at the present time is the taking of the initial plunge. So far as actual reforestation goes, the pioneer work has been done in the experimental tracts of the pulp companies themselves. The Laurentide Company, for example, is planting fully two million trees from its experimental plantations this year, and this is to be increased largely in 1921. The Riordon Company has also been at work for several years and will plant about half as many as the first named concern. The Abitibi Company has also begun to replant, and Spanish River and Wayagamack are likely to make a start this year.

Careful planting and reforestation, said Mr. Wicksteed, in conclusion, will make Canada the greatest pulp and paper producing country in the world. Fire protection is already saving millions, and also saving the mosses in which the young saplings take root. In Ontario and Quebec alone there are roughly a million square miles of Laurentian or primary forest land, of which a bare five per cent. is arable. With such an area carefully handled, these two provinces can in future lead the world from the viewpoint of forest products.

Norway Wants Canadian Spruce Seeds

Norway, one of the most advanced countries in the world in the science of forestry, is looking to Canada for seeds of trees which grow faster in Norway than the native tree seeds do, according to Harold Lynum, master of forestry of Norway, who is in Toronto, where he begins a two-year term of study of the trees and lumbering conditions of the Dominion.

Mr. Lynum arrived in Toronto lately and intends to take a course at the University before setting out to do field work, which will extend from coast to coast.

"The seeds which we have got from Canada in the past have not been very satisfactory, because they were obtained from the wrong places very often. A spruce tree, for instance, is found in the far south, in the far north, near the sea level, and high up in the mountains, but the seeds which we want for Norway must come from the coast to be of any value. The place and time of collection, the age of the trees and the elevation at which they grow are all important," he said.

During his visit to Canada Mr. Lynum will go as far north as Alaska and will study the trees of the clay belt north of the Great Lakes. "I am going wherever there are trees and sawmills," he concluded.

Japan Anxious to Get Douglas Fir

"Especially Japan wants the great Douglas fir. We have very much extended our steamship companies, our trans-Pacific traffic, and we want your wood badly. We have plenty of cedar, but Douglas fir and also cascara bark for drugs and wood pulp for the manufacture of paper—these we are very anxious to get."

The speaker was Mr. Tobey Hosoi, who, with Mr. S. Oka, recently arrived in Vancouver from Tokio, via San Francisco, on a world tour of business investigation. They represent Mogo and Company, of Tokio, which has branch offices in nearly every part of the world and probably has the biggest turnover of any firm in Japan. Their silk business alone with the American continent in 1918 amount to 300,000,000 yen, (about \$150,000,000). They are the biggest silk company in Japan and also deal upon an extensive scale in fancy goods, cotton, machinery, etc., and own and operate a number of steamships.

While it has been expected that Spanish River Pulp and Paper Company would wipe out the arrears in the preferred at the special meeting to be held next month to clear up the interest on bonds and notes, there is a feeling now that no action will be taken until the fiscal year ends on June 30 next. By that time the arrears will amount to an even six years, from July 1, 1914, or 42 per cent.

Striking Displays of Forest Products

Exhibits at Windsor Street Station, Montreal. Which Reveal Possibilities of Lumber Industry

In these days one is accustomed to observing evidences of a liberal policy with regard to advertising. A community of producers of a certain article agree to bring that article to the notice of the consuming public as being generally excellent. No advertising of brands or trade marks accompanies such publicity, the policy being that the actual advertisers will benefit sufficiently by the increased demand. Essentially the same policy has been followed by the Canadian Pacific Railway with regard to Canadian produce. Such a corporation can afford to take the attitude that anything which benefits Canada is of advantage to themselves. In pursuance of such a policy the Canadian Pacific Railway is always bringing to the notice of the public in Canada and abroad the numerous and valuable natural resources of the country by means of attractive exhibits of grain, fruits, minerals, fish, game and forest products.

The obvious place for such displays (obvious now that it is demonstrated) is the entrance to an important railway terminus, and the Windsor Street Station at Montreal offers an ideal position in that respect. At this centre a large lobby is devoted to an exhibit of Canadian natural products on the one side and products of the Province of Quebec on the other. In these exhibits forest products find a prominent place. Fine examples of panelling showing eastern and western woods line the cases. An arrangement of woods cut to lengths corresponding to their relative importance as lumber doubtless serves to correct the impressions of many. Such an exhibit is more impressive than statistics in type—a man from Vancouver gains at once an adequate idea of the great importance of spruce, and one from Nova Scotia notes the increasing significance of Douglas fir in the lumber markets of the world. An observer who had fancied that white pine was as scarce as some dealers pretend might have a shock, and the extent of the cut of that excellent hardwood yellow birch as shown graphically here might stimulate a foreign consumer to make further inquiries. Such exhibits cannot fail to teach the transient merchant or manufacturer the possibilities of the Canadian lumber industry.

In the window devoted to the products of Quebec is a set of specimens of woods grown in the province which demonstrates the variety which the valley of the St. Lawrence encourages.

Lumbermen should welcome industries which use wood unfitted for their own purposes and should be interested in the possibilities of using trees and waste for pulp and distillation products. An exhibit of pulpwood and its many products is a feature of this display and illustrates the value of wood even when disintegrated to its ultimate fibres. The Wood Distillation exhibit shows one hundredth of a cord of birch, beech and maple and the primary products in their true proportions which may be obtained therefrom. The final products—methyl alcohol, formaldehyde, acetic acid, acetone, and the rest are also displayed. Other products obtainable from Canadian trees are also shown and coloured illuminated transparencies showing logging scenes, shipbuilding and other industries make the exhibit an attractive one.

The specimens were provided by the Forest Products Laboratories of Canada and any enquiries concerning them should be addressed to that institution at 700 University Street, Montreal.

Breezy Notes from Western Provinces

The Arrow Lumber Co., Limited, Edmonton, Alta., was recently granted a Provincial charter.

The Union Saw Mills Ltd., Edmonton, Alta., were recently incorporated with a capital of \$50,000.

A charter has been granted to the Wilson Shingle Co. Limited, Vancouver, with a capital stock of \$25,000.

Recent incorporations in British Columbia include the Newcastle Logging Co., Limited, of Vancouver, capital \$10,000, and Charlotte Islands Spruce Products Limited, capital \$300,000.

The Abbotsford Timber, Mining & Development Co., Abbotsford, in addition to giving every married employee a fine turkey for Christmas, provided a turkey dinner at which 32 sat down the day before Christmas.

A fire occurred at the Pacific Tie & Lumber Co.'s mill, Hope, recently. Mr. Holden's shack was totally destroyed, including tools and everything contained in it. The fire originated, it is believed, by an over-heated stove.

The Beaver (Alberta) Lumber Ltd., Winnipeg, Man., have been incorporated to conduct a timber, lumber and milling business in all its branches. Capital \$300,000. D. R. McCann and H. Spencer, solicitors, Winnipeg, are two of the incorporators.

S. P. W. (Doc) Cooke

W. F. Cooke

Members of the new wholesale lumber firm of Cooke Bros., Montreal

During the recent heavy rains the flood waters on Silver Creek, Mission District, carried away the logs and booms at Hanna & Williams' camp. This was the highest water yet seen on the creek and for some time the camp was in danger of being under water.

The old settlement of Durien, situated to the north of Dewdney, and served by the C. P. R. main line, has taken a new lease of life. There are now two saw mills and one shingle mill operating in the settlement, and though sawing ceased for a while, owing to the weather conditions, shipments have continued right along.

In order to tap some of its timber limits near Harrison Lake the Rat Portage Lumber Co. Limited will build six miles of logging railway from the shore of the lake, about twenty miles from Harrison Mills. Surveyors are already on the ground locating the right of way and the line is expected to be ready in six months.

Messrs. Webb and Gifford of New Westminster, have recently put on the market a new Ideal shingle machine, embodying many improved ideas over the types that have been on the market in recent years. It is claimed that the new machine, which is of rugged type, turns out a uniform shingle together with a saving of lumber.

The directors of the Moore-Whittington Lumber Co. Ltd., Victoria, with premises on the waterfront, Pleasant street, and the directors of the E. W. Whittington Lumber Co., Ltd., with plant on Bridge street, Victoria, have decided to amalgamate, the two concerns, retaining the name of the Moore-Whittington Lumber Co. Ltd.

Fire losses of the forest reserves in Alberta during 1919 aggregated more than \$2,250,000, or greater than the estimated loss of the previous ten years, as reported lately by the Forest Reserves Inspectorate. Fires swept over 548,000 acres of forest reserve in 1919, while 20,000 acres were burned in 1918, which was chiefly open land.

Another addition to the business life of the community is to be started at Langley Prairie, Messrs. Mills Bros. deciding upon the erection of a shingle mill which will be located at the lower end of the spur on the B. C. E. R. Active construction is to commence at once. The bolts for cutting will be collected from the neighborhood of Langley Prairie.

The baby is Opportunity.

How Foreigners May Become Good Citizens

Alfred Fitzpatrick, Principal of the Frontier College (formerly the Reading Camp Association), Toronto, writes the "Canada Lumberman" as follows:

"We are sending you under separate cover a copy of our latest publication, "Handbook for New Canadians," which we hope you will find interesting and instructive.

For many years we have been endeavoring to meet the needs of camps, works, and industrial plants, not only in the matter of general education but also of the citizenizing of foreigners. This little book is the product of years of effort, and it hopes to meet the needs of newcomers wishing to attain citizenship. Even if they have no other book they will by its use become intelligent citizens.

We believe that even without the aid of an instructor the foreigners may by a study of this book acquire a creditable fund of information. It not only starts with the simplest form of object words, phrases, and themes, leading in paragraph lessons, but it has also enough geography of the provinces, fundamental principles, of civics, and the story of Canada in outline form to enable a man to acquire intelligent citizenship.

Besides this the various steps in attaining naturalization are simplified. Translations are made into six native tongues of more than a thousand of the most used stock-words. In addition the lessons and the subject matter of the whole manual is permeated with wholesome Canadianism, which should prove a factor in paving the way for a broader and fuller Canada.

We think, too, that even immigrants from the United States though able to read English, should become familiar with the outlines of government and civics of Canada such as are set forth in this work of reference. Many thousands in the West who have come from the United States, after residence and other duties have been performed, because of their knowledge of English, usually acquire citizenship and obtain the right to vote. They still have as their background, in matters of government, ideas previously obtained in their respective states of the union. Even they should be required to have information regarding Canada, its provinces and ideals governing the life of the Dominion as briefly set forth in the volume.

The handbook sums up the season's work of many an instructor, who year after year has been doing in out-or-the-way camps what is now being recognized as a necessity in the future welfare of the Dominion.

Eastern Lumbering Conditions Favorable

A correspondent writing from Earltown, Colchester county, N. S., says lumbering conditions never were better, as far as logging is concerned, but deal hauling is held up for want of snow. Lumbering is carried on extensively by H. H. Johnston, just across the Kemptown border, where Mr. Alex Fraser of Hopewell, Pictou Co., has a contract of logging, while Mr. Johnston's men look after the sawing. Mr. Adam MacDonald is busy logging near Earltown village. Hayman Bros. and Sutherland and Matheson are lumbering on a large scale at Balmoral Mills for A. McKenzie of River John Choppers of the right stamp are in great demand.

Wayagamack Co. Buys More Timber Limits

The limits owned by the Portneuf Pulp & Lumber Company of Albany, N. Y., comprising 484 square miles and said to be the best on the North Shore in Quebec have been sold to the Wayagamack Pulp & Paper Company Limited, Three Rivers, Que. It will be remembered in this connection that it is only a few weeks since the Wayagamack Company purchased the valuable Breakey limits in the Gaspé Peninsula, so that they now hold standing timber far in excess of the requirements of their mills.

Industrial Work in the Lumber Camps

An important dinner and conference was held at the West End Y.M.C.A., Toronto, on Wednesday January 21st under the Industrial Section of the Y.M.C.A. There was a large and representative attendance of business men, and bright, snappy addresses on various features of work were presented, showing how it has been extended in a number of cities in Ontario and among the large employers of labor. Many firms now have their own Y.M.C.A. secretary and buildings which are popular and well patronized by the employees.

The four sides of the work, physical, social, educational and religious, were touched upon by various speakers. J. W. Gibson, General Manager of the Canada Cycle & Motor Co., Toronto, presided, and among those who gave utterance to virile thoughts on the timely subject of industrial work and worth were Charles R. Towson, International Industrial Y. M. C. A. Secretary, New York, who has been a leading exponent for fifteen years, of what the Y.M.C.A. can do in industry, M. R. B. Boyes, Y.M.C.A. Industrial Secretary for the

Central West spoke of the work among the lumberjacks and told how it had been carried on among seven companies with forty camps reaching about four thousand men in Manitoba and Saskatchewan. It was asserted that the work appeals strongly to both the foreigner and the Canadian and tends to increase the efficiency and loyalty of those in the bush. Further reference to this phase will be made in an early edition of the "Canada Lumberman," in which Mr. Boyes will deal with different angles of the movement.

Another speaker was J. R. Harris, National Associate Industrial Secretary, Canadian Y.M.C.A., who talked on the Canadianization of industrial aliens. John Sumner, former Secretary of the Industrial Department Y.M.C.A., New York, and now National Industrial Secretary of the Canadian Y.M.C.A., delivered a short, forceful address as did also W. A. McKinnon of the McKinnon Industries Ltd., St. Catharines, who gave his views from the employer's standpoint of what the Y.M.C.A. means to industry, and told of the splendid results in the Garden City.

The gathering was brought to a close by Capt. Chas. W. Bishop, General Secretary of the National Council of Young Men's Christian Associations of Canada. He referred to the steps necessary to give effect to this great project and pictured its progress from the mount of vision to the summit of achievement.

All the addresses were practical and told of something that had been accomplished rather than outlining a fine theory or painting a beautiful picture. It was emphasized that the Y.M.C.A. in industry has proven its capability to serve capital and labor by bridging the gap between these two indispensable forces; that, wherever it had gone it had made good, and that all over Canada the Association, through its industrial department, had entered large plants of all kinds with a programme and a message.

Too Much Good Stuff Goes Into Burners

"It's almost a tragedy that all this good fuel should be going to waste year after year. You may depend upon it the people of British Columbia will regret it one of these days."

The above remark, or some other remark like it, has fallen from thousands of lips in the province during recent years, particularly when the speaker has been gazing at one or other of the refuse burners, one or other of the wood slab heaps, connected with B. C. lumber mills. Today fuel—even wood fuel—is so expensive in the few cities and towns of any size in the province that the remark has often had a very personal significance.

Mr. Charles E. Huddart, general manager of the Associated Timber Exporters of British Columbia, Ltd., a lumberman who is in close touch with all the mills in the province was asked his opinion.

"Yes, I've often heard comments about the destruction of this refuse," he replied, "but practically no wood refuse is destroyed in the mills about a city Vancouver that would be of any use as fuel: it is chiefly sawdust, rubbish, bark, etc., that is so destroyed. Away back at sawmills in the woods and near small settlements, where the inhabitants cut their own lumber from the surrounding woods, it is different, as there is no market for the slabs from the sawmills and so they are destroyed. Here that is not so, or only in a very minor degree."

In reply to another question as to the by-products of sawmills Mr. Huddart said: "There is no question that all the sawmills would be glad to have some company or organization get to work in a centre such as Vancouver and take all this sawdust and other refuse off their hands to be manufactured into dyes or other useful manufactures, as these refuse burners are always a menace around a sawmill. A plant of that kind, however, would have to be central and deal with a number of mills—it would not pay to establish one in connection with even the biggest individual mill. There would have to be a system of scows or cars to collect from many different mills. Of course there are here and there small pressing plants attached to a mill, and these manufacture bricks from sawdust and from shavings, but that is all."

Here is a chance for some enterprising company or organization to step in and do something—the material is there for the asking.

One of the largest timber deals put through in recent years is that of Messrs. Abernethy and Loughheed, who have purchased the entire timber limits around Steelhead, B. C., including those formerly held by Mr. W. J. Clarke. The purchasers are now constructing a logging road for the purpose of getting out the logs. Motor trucks will be used.

Keep your yards and sheds scrupulously clean. Don't do anything, or permit anything, that could possibly start a fire. Lumber and building material generally, is entirely too high to sell to the insurance man in times like these.

Review of Current Trade Conditions

Ontario and the East

In the lumber arena everything is moving along with a swing and any stocks on hand can be readily disposed of while prices are still ascending. Even the fact that a buyer does not close a deal at once, does not cause the wholesaler or manufacturer one minute of worry as he realizes that, within possibly an hour or two, he will likely be able to dispose of whatever width, thickness and grades he has to another customer at a higher figure. There is practically no current standard market list of prices. Much depends on where the stock is located, the condition it is in for shipping, how badly it is needed, the quantity, availability, etc. All these are governing factors and cause values to differ a great deal. If local purchasers are disposed to complain of the seemingly excessive figure asked for white pine, hemlock or spruce, wholesalers report they they can obtain equally as good or even a better quotation across the line and also reap the benefit of the premium on the American dollar which, in itself, constitutes a handsome profit on a carload of lumber at present exchange rates. There has been no disposition to take any undue advantage of the present situation and raise prices unjustifiably. It is simply the application of the inexorable law of supply and demand that is driving values up to the highest pitch ever known in the history and development of the industry. To what altitude these will go no one is prepared to state, but it looks as if the end was not yet, and just how long present or increasing figures will prevail will be determined very largely by the cut this winter in Ontario, Quebec and the Maritime Provinces, driving conditions in the spring, state of the labor market, building operations, etc.

At the present time the weather in most parts of the country has been favorable for hauling logs to the streams. Labor is a little more settled and plentiful, but, on the other hand, prices are ascending all the while. There is a disposition for wages to increase, camp supplies, in which flour forms a constituent part, are aviating, and everything else in sympathy. This all means greater disbursement on production account, and higher costs of production, coupled with abnormal demand, low stocks and the rapidly multiplying uses of forest products naturally have only one interpretation and that is value-raising levels.

The reasons why lumber, which was one of the last commodities to advance, is now so steadily on the upgrade, are fully pointed out in special articles in another portion of the "Canada Lumberman."

Coast stocks are practically unquoted with the exception of shingles. There is every hope that release may come in the near future of certain lines, but just now there is very little doing and most Eastern representatives of B. C. mills are marking time. Stock sheets are now being prepared by some of the Western mills, and there may be a few lines in which it is possible to make offerings to Eastern customers. In the meantime, orders for millions of feet have been turned down by Ontario representatives of B. C. firms. Prices remain very firm with a strong upward tendency.

Some mills report that they are not taking orders at the present time as shipments are too far behind. The recent storm has somewhat delayed car service, particularly in Canada, which, up to the present, has been fairly satisfactory. There are rumors of an embargo being placed at the Niagara frontier. A recent despatch from Montreal says that serious results for Canadian shippers, both exporters and importers, are foreshadowed in the announcement of an embargo on all freight moving East from Canada to the United States by way of the Niagara route. The embargo has been placed by the U. S. Railway Administration, and bad weather conditions are given as the reason for the action.

Attention of Canadian shippers is being called to this important embargo by the Railway Association of Canada (Railway War Board). It will affect not only Canadian goods moving into the eastern United States either for shipment to Europe or for United States, but it will close off the eastern movement of United States goods which usually cross Canada from Detroit to the Niagara frontier. It is suggested that Canadian importers may also be affected by the possible delay of supplies coming from the United States by way of Niagara. The Railway Association points out that the same congestion which compels the United States to place this embargo is obviously likely to have a corresponding effect on the import movement into Canada through the Niagara frontier.

The announcement of this embargo might also embarrass Canadian lines which have already accepted cars destined for eastern

United States via the Niagara frontier. These cars will have to be held until means of disposing of them are made. This may cause a strain on the track facilities of Canadian lines.

The seriousness of the situation is indicated by the fact that the Niagara gateways carry the heaviest volume of interchange of all the frontier points, the Association said.

Between December 21 and 31 practically 10,000 loaded cars were handed to the United States lines by the Canadian lines at the Niagara frontier. At that rate this embargo would leave one thousand cars per day in the hands of the Canadian roads, for which they would have to find track room. Certain exceptions are allowed in this embargo, live stock, perishable freight, newsprint paper, wood pulp, pulp wood, Government freight, coke, petroleum products, and freight for movement through Atlantic seaboard points covered by special permits.

United States

The trend of prices is constantly upwards and in spite of complaints and criticism buying continues on a heavy scale. Business at most centres has opened up well for the new year and nearly all mills have more orders on hand than they can fill. There is every indication that the demand from the present sources will continue—it will probably increase with the advent of open weather. At the same time, there are indications that spring building will be curtailed except in the industrial centres and other crowded cities where housing facilities must be extended. While above normal in some sections it will be decidedly subnormal in others. If production is brought to approximately normal proportions within the next thirty to sixty days, it is probable, therefore, that prices will be stabilized without further decided advances over present levels.

Prices on all hardwoods are holding level with a tendency to increase. Conditions that have caused decreased production continue about as previously reported; very heavy rains in the South last week, in fact, have made the outlook even poorer for resumption of logging and many mills that were running on reduced schedule have been forced to close temporarily. In the Northern woods too much snow has fallen for operations to be conducted economically and the winter run of logs threatens to be curtailed. There is nothing to indicate recession of prices for at least three or four months to come, when production will, it is expected, resume normal proportions. Conditions then will depend largely on the activity of the demand; also on whether the high price fabric in other lines is sustained.

The various spruces handled on the New York market went up \$4 to \$5 again recently and Canadian spruce lath is selling at \$17. As high as \$18 and even \$20 is being asked. Cypress advanced \$10 all along the list, and African and Mexican mahogany increased \$20 at one clip Monday. There is a strong advancing tendency in other building materials, notably Hudson brick, which is selling at \$23, but which will doubtless bring \$25 before many days.

Advices from Buffalo are that the demand for the various grades of white pine continue strong. It is stated that some of the wholesale dealers have refused to accept any more orders for the present. This condition is expected to last for some time, and naturally prices will advance.

The demand for hemlock dimension is greater than the supply and prices on all items are strong. Demand for hardwoods also continues active in all items with plenty of orders at satisfactory prices.

Southern pine lumber is hard to get at any price. Flooring and other shed stocks are in great demand.

Production, as shown by the Southern pine barometer, is still considerably below the average of the last few months. Very heavy rains in most of the manufacturing districts account in part for this low production. Some of the mills, too, were delayed in getting their crews fully reorganized after the holiday shut down. Reports indicate that output will continue restricted for a time, as wet woods make logging conditions very difficult. The car situation is little changed, but shipments are about on a par with present production. There is ample basis for the opinion that the market will hold all of its strength for some time to come, and further advances in prices are probable.

The problem to-day in all woods is supply and delivery. The demand is good, but some business is going begging because of the

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 20 cents per agate line (14 agate lines make one inch). \$2.80 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Wanted-Lumber

Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 8-t.f.

Spruce and Shingles Wanted

We are always in the market for Spruce boards and 2 in., also Furring, Lath and Shingles.

RICE & LOCKWOOD LUMBER CO.,
1-4 Springfield, Mass.

Lumber Wanted For Cash

Will pay spot cash soon as on the cars at shipping point for Log Run Basswood, Elm, Birch, Maple, Beech, also Hemlock, Pine and Spruce Lumber and Lath, dry or new cut. Box 117, Canada Lumberman, Toronto. 3-6

Wanted Lumber

Hardwood lumber wanted. Birch, Maple, Ash, Elm, Basswood, and other hardwoods. Dry or sawn to order. We send inspector. Apply Box 97, Canada Lumberman, Toronto. 1-4

Basswood and Maple Wanted

Fifteen carload dry 1sts and 2nds or No. 1 Common and Better, white winter cut Basswood, pump 1 in. thick.

Twenty carloads dry hard Maple, 1 1/4" x 3 1/4" multiples of 9" and 12" in length, one clear face and square edges.

Twenty carloads Hard Maple, 6 1/2" x 6 1/2" and 5 1/4" x 5 1/4" x 22" and 26" in length or multiples, practically clear stock and free from checks; can ship green.

For further particulars apply to Box 85, Canada Lumberman, Toronto. 24-t.f.

Wanted To Buy LATH

We are in the market for a large quantity of Lath, including No. 3 grade and 32 in. for immediate shipment or will contract for output. Paying good prices and cash on receipt of B/L.

What have you to offer? Send good description, quote F.O.B. Chicago; state quantity offered.

COVEY DURHAM COMPANY,
431 South Dearborn St.,
Chicago, Ill. 24-8

Stocks Wanted

Stocks of Lumber and Lath wanted—Spruce, Hemlock, Pine and Birch.

The Elgie & Jarvis Lumber Co., Limited,
2-3 18 Toronto St., Toronto, Ont.

Birch Wanted

No. 1 Com. and Bet. 4/4 to 16/4". Name best prices delivered Philadelphia, Pa. rate. Warren Ross Lumber Co., Jamestown, N.Y. 1-4

Sawmill Men!

Standard Hardwood Lumber Co., Weston, Ont., will buy your entire output, all grades and kinds. Highest cash price paid. 2-5

Lumber Wanted

Send us list of lumber you wish to move either car lots or block. Advances made. Our buyer is now out and will call on you.

The Elgie & Jarvis Lumber Co., Limited,
2-3 18 Toronto St., Toronto, Ont.

WANTED

White Pine Spruce
ALL GRADES.

Also LATH of all grades

JOHN F. BURKE,
2-t.f. Aeolian Bldg., New York City.

PULPWOOD

We are open to purchase peeled Spruce and Balsam Pulpwood in carload lots. Quotations furnished on request. Also Deal ends.

The Jost Company, Limited,
285 Beaver Hall Hill,
Montreal, P.Q. 1-t.f.

Crating Wanted

A quantity 1" and 1 1/4" dry Box and Crating Lumber, White Pine, Spruce or other soft woods, good widths and lengths. Quote price delivered F.O.B. cars Syracuse and Rochester, N.Y. or point of shipment. State amount you have of each kind, etc.

Advise if you can dress and resaw.

Wilson & Green Lumber Company,
1-4 Syracuse, N.Y.

For Sale-Lumber

SPRUCE KNEES FOR SALE

150 Crown Spruce Knees, 4' x 3' 6", finished 8', 9' and 10" thick; thoroughly sound, ready for immediate delivery. For particulars, apply A. K., Box 78, Canada Lumberman, Toronto. 24-4

Lumber For Sale

100 M Ft. of 3" x 4" up Cull Pine.
200 M Ft. of 1" x 4" up Cull Pine.
100 M Ft. of 1" x 4" up Cull Spruce.
200 M Ft. of 5/8" Cull Spruce.
Apply: J. P. ABEL, FORTIN, LTD.,
3 Maisonneuve-Montreal.

B. C. SPRUCE

15c. per Thousand Feet

We offer slightly over one billion feet. Seventy-five per cent spruce, balance pine, fir and hemlock. Close to G. T. P. Near Fort George. Timber well located on good drivable streams. For particulars, cruiser's report, etc., write

LOUGHEED & TAYLOR, LIMITED,
3-6 Calgary, Alberta.

FOR SALE

200 M. ft. 1" and 1 1/4" Dry Basswood.
1 car 6" Hemlock Ties.
1200 6" Cedar Ties.
500 cords dry 4 ft. Hardwood Cordwood.
500 cords dry 4 ft. Softwood Cordwood.

Can make prompt shipment.

THE PEARCE COMPANY, LIMITED,
3 Marmora, Ont.

FOR SALE BIRDS EYE MAPLE

Could load two or three cars of Birds Eye Maple. The timber is standing and will not be cut unless sold. For particulars apply to Box 214, Thessalon, Ont. 3

Wanted-Machinery

Motor Wanted

35 to 50 H.P. Motor for Hydro. Apply Box 70, Sarnia, Ontario. 3

Band Mill

Wanted, Pony Band Mill, complete. Box 122, Canada Lumberman, Toronto. 3

Conveyor Chain Wanted

400 feet of conveyor chain heavy enough to handle ties.
Box 101, Canada Lumberman, Toronto. 2-3

Band Mill Wanted

1-7 ft. Double Cut Band Mill. Give description and condition, also price. Box 80, Canada Lumberman, Toronto. 24-1

Band Resaws Wanted

Band Resawing Machines, Vertical and Horizontal, up to 48" or 54". What have you to offer. Box 115, Canada Lumberman, Toronto. 3

Refuse Burner

Wanted, second hand refuse burner complete, ten or twelve feet diameter, thirty to forty feet high. Give price and full particulars. Box 121, Canada Lumberman, Toronto. 8

EQUIPMENT WANTED

1 Buhl Wheel for saw-mill log haul.
370 Ft. good used No. 500 Roof Back lumber conveyor chain.
75 boom chains, 1/2", with clevis and toggle.
1 Iron friction wheel, 8" or 10" x 30" to 40" and 10" paper friction to match.
1 8-20 worm roll.
2 good used double cut band saws, 9-10", 15 gauge, 35' long.
1 Live roll for edger table, 6" diam., 2' 4" long, with gear.

THE PEARCE COMPANY, LTD.,
3 Marmora, Ont.

Sawmill Wanted

Second-hand saw mill with circular or band, with gang or gang edger. Cutting capacity 50,000 feet in 10 hours. All machinery must be in good condition. In answering please give full inventory and specification of mill.
Box 100, Canada Lumberman, Toronto. 2-3

36" Edger Wanted

Must be in first class condition.

The Laberge Lumber Co., Limited,
2-4 Sudbury, Ont.

WANTED

Good Alligator Engine

complete including double propellers, with or without usual tackle. Give full particulars.

W. C. EDWARDS & CO., Ltd.
Ottawa, Ont., Canada. 24-3

WANTED—Part Equipment for Sash and General Planing Mill

Band Saw, Shaper, 4-sided Sticker, Jointer, Double Surface Planer, Chain Mortiser, Tenon Machine, Boring Machine, Power Feed Rip Saw, Cutoff Saw, Glueing Press, Clamps, etc. Must be modern and in good shape. Spot cash. Apply Box 110, Canada Lumberman, Toronto, Ont. 2-3

For Sale-Machinery

Engine For Sale

One Goldie & McCulloch Engine, 16" x 38", complete with heater, pipes, oil pump, etc., in first class condition.

R. Laidlaw Lumber Co., Ltd.,
1-4 65 Yonge St., Toronto.

Steam Plant For Sale

First class steam plant for saw mill. Boiler nearly new, 110 H.P. Engine 60 H.P. in first class shape. Also smokestack and all steam and water connections. A snap if taken immediately. Apply George A. Oldrieve, St. Thomas, Ont. 1-t.f.

Boilers For Sale

Two Return Tubular Goldie-McCulloch Boilers, 18 ft. long, 72 in. in diameter, 74 four inch tubes, together with Dutch Oven Fronts, steam gauges, water columns with mountings; blow off cocks; grate bars; safety valves and breeching. Boilers now in use carrying 100 lbs. steam. Can deliver by February 10th. Address,
Cleveland-Sarnia Saw Mills Co., Ltd.,
3 Sarnia, Ontario.

For Sale at Bargain

to make room for heavier machinery.

1-3 saw Lath Machine Iron Frame Bolter combined.
1-Bolter for making Lath Bolts out of round timber.
1-45 H.P. Engine, line shaft 8 ft., flywheel 14 in., 7 ft. pulley.
1-Goldie-McCulloch Single Surface Planer and Matcher, weight about 3 tons.
1-3 saw Edger.
Will sell any of above machines separately. Machinery can be seen at Utterson Lumber Co., Utterson, Ont. 3-6

Machinery For Sale

- 1 Eighty Horse Power Boiler.
- 1 Set of Governors for 25 H.P. Engine.
- 1 Three Block Log Carriage, equipped with boss dogs.
- 1 Jack Ladder Gear and Friction Core.
- 1 Double Action Force Pump.
- 1 Set of Reece's Patent Taps and Dies.
- Quantity of Shafting and Pipes.

MARK ROGERS,
Parry Sound, Ont.

2-3

For Sale

- 1—No. 303 C.M.C. Extra Heavy Four-Sided Moulder, only used three weeks. Price, \$1,100.00.
- 1—New No. 110 C.M.C. Single Surface Planer and Matcher, with Moulding attachment. Price, \$800.
- 1—New No. 272, Machinery Company of America Automatic Circular Rip and Cross Cut Saw Shafter, capacity up to 72 in. Price, \$295.00.

WILLIAMS & WILSON, LTD.,
84 Inspector Street,

Montreal, Que.

3

Wanted-Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents.

WANTED—POSITION AS BOOKKEEPER or Lumber Grader. Eight years' experience sawmilling. Not afraid of work. Box 113, Canada Lumberman, Toronto. 3

WANTED—By a capable man of 25 years' experience, a contract of manufacturing Lath and Pickets by the thousand. Satisfaction guaranteed. Address T. G. R., Box 819, Pembroke, Ontario. 3-5

BAND FILER with helper open for position. Several years' experience, capable of looking after circular and gate saws, also can furnish best of references. Reply Box 118, Canada Lumberman, Toronto. 3-5

OPEN FOR A POSITION as manager or representative; married, with twenty-five years' experience in the wholesale lumber business; can give reference as to capabilities. Box 87, Canada Lumberman, Toronto. 3-t.f.

TO LUMBER OPERATORS—I am open to consider position as manager of woods operations, sawmill or selling force; experience in hardwoods in the United States and in New Brunswick Spruce. Can handle men and get results. Box 84, Canada Lumberman, Toronto. 2-4

SECRETARY—Canadian, twenty years' experience as accountant, auditor, compiler of publicity literature, editor, and secretary, desires position as Secretary or Secretary-Treasurer of lumber, pulp or paper manufacturing company with headquarters in Toronto, Montreal or Vancouver; at present in government service handling timber berths on behalf of the Crown. Box 111, Canada Lumberman, Toronto. 2-4

Wanted-Employees

BAND RESAW AND STICKER MAN WANTED. Apply Box 70, Sarnia, Ont. 3

WANTED—a First-class, experienced Kendall Gang Filer; good opening for the right man. Apply at once to Davison Lumber & Mfg. Co., Ltd., Bridgewater, N.S. 2-3

SAWYER WANTED—For double cut pony band. Must be first class man. Apply Box 112, Canada Lumberman, Toronto, Ont. 2-4

WANTED, AN EXPERIENCED FOREMAN to take charge of box shop, young man preferred; knowledge of both French and English necessary. Timber For Sale

3,000 acres Crown Right Virgin Timber in Ontario. Birch, Hemlock, some White Pine, Basswood, Elm. Warren Ross Lumber Co., Jamestown, N.Y. 1-4

Timberland For Sale

Let us prove that we have the best timber proposition on the Pacific Coast; \$30,000 cash takes it. Hollis R. Anderson, Fort Jones, Calif. 2-3

Pulp, Paper and Saw-Mill Proposition in British Columbia

Owner offers for sale on Vancouver Island, B. C., approximately 1,000,000,000 feet of timber, 1/3 Fir, 1/3 Hemlock, balance Spruce and Cedar. Best land-locked harbor on Pacific Coast. Complete cruise by firm of Forest Engineers with international reputation. Full investigation solicited. Price, terms and complete details furnished to principals who can exchange satisfactory financial references. Owner, P. O. Box 189, Vancouver, B.C. 3

Saw Mill Plant For Sale

Practically new and modern Saw Mill Plant, capacity about 30 Million feet per annum, located in the Interior of British Columbia on a beautiful inland lake and on the main line of the Grand Trunk Pacific Railway. About 500 Million feet of timber on and adjacent to lake (about 90% Spruce) and another Billion feet available at reasonable prices. Natural conditions ideal for economical logging, manufacturing, piling and shipping. An advantage of about \$4 per thousand feet in freight rates to the Prairie Provinces over Coast shipments. This property offers unlimited possibilities as a lumber, pulp and paper property. Would consider selling a half interest. Terms reasonable.

Auction Sale

of Valuable

Quebec Timber Limits

R. H. Klock & Co., through W. A. Cole, Auctioneer, on the Nineteenth day of February, 1920, at the hour of three o'clock p.m., subject to one reserve bid, will offer for sale by Public Auction at the Russell House in the City of Ottawa, in the Province of Ontario, timber berths numbers 176 and 177, Kipawa, are 100 sq. miles more or less. These timber limits contain large quantities of pine, spruce, and other wood goods. For further particulars apply to James B. Klock, 70 St. Matthew St., Montreal; Errol M. McDougall, K.C., Royal Trust Building, Montreal; D. B. Rochester, 145 James Street, Ottawa, and W. A. Cole, Hope Chambers, 63 Sparks Street, Ottawa, Auctioneer.

21-26

TIMBER LIMITS

We have some very attractive offerings in Standing Timber, Cedar or Spruce, in Alberta and B. C., with or without sawmills. Lougheed & Taylor, Ltd., Calgary, Alberta. 2-3

Timber Land For Sale

Circumstances permit us to offer a very desirable B. C. Timber land for sale at very advantageous terms to purchaser, and on main land.

Area 23 sq. miles. Estimated stand 250 million ft. B.M. 80% Fir, balance Hemlock, Spruce and Cedar. Has also camps and logging equipment practically ready for immediate operations.

We also have Hardwood limits of moderate size in Ontario, right along Railway and within 50 yards of siding, also Pulpwood Tracts.

Let us know your wants and we will tell you if we can suit you.

Principals only.

WM. COOKE & SON,

2-3 Stair Bldg., Toronto.

Auction Sale

of Saw Mill Machinery and Timber Limits at Bannockburn on the C. N. Ry., Hastings County, Wednesday, February 11th.

LIMITS—Lots 27 and 28 in the 1st concession of Tudor.

Machinery—75 H.P. Boiler, 65 H.P. Engine, Water Wheel, Gear, Main Saw Frame, with cable drum, Heavy Log Carriage and Track, 60 in. Inserted Tooth Saw, 24 in. Planer and Matcher, Edger and Trimmer, nearly new, Rip Saw, Slab Saw, 20 in. Smoke Stack, Belts, Pulleys, Shafting, Tools, and other machines.

Also Sawmill Building, 40 x 60, 20 ft. high. Heavy pine timbers. Make good Barn.

For further particulars apply to

W. A. INGLEHART,

2-3 Oakville, Ont.

Sale of Timber

Tenders will be received by the undersigned up to and including Monday, February 2nd, 1920, for the right to cut the timber on the Township of Hele, situate west of the Township of Nipigon in the District of Thunder Bay, containing an area of 48 square miles more or less.

Tenderers will state: (1) the amount they are prepared to pay for Pine and other timber respectively, in addition to Crown dues of \$2.00 per M. ft. B.M.; (2) the amount per tie in addition to Crown dues of 5 cents each, for such timber as may be suitable for making railway ties; (3) the rate per cord for Spruce Pulpwood in addition to the Crown dues of 40 cents per cord; (4) the rate for Balsam and other wood suitable for pulpwood in addition to Crown dues of 20 cents per cord; (5) the rate per post for Cedar posts in addition to Crown dues of 1 cent each; (6) the rate per pole for Cedar posts, if any, in addition to the following rates of dues, namely: (a) Poles 30 ft. and less in length, 15c each. (b) Poles 31 ft. to 40 ft. in length, 25c each. (c) Poles 41 ft. to 50 ft. in length, 50c each. (d) Poles 51 ft. and over in length, \$1 each.

1. Any Pine timber on the berths which the successful tenderer may cut into square or waney board timber, shall be subject to a flat rate of \$200.00 per M. feet cubic.

2. The rate of bonus to be offered on Pine sawlogs shall be uniform for all classes of Pine.

3. Licenses to be annually renewable for five years or until the 30th of April, 1925, after which no further renewals will be given and the territory shall revert to the Crown.

4. An annual ground rent of \$5.00 per square mile, and an annual fire protection charge of \$6.40 per square mile to be paid and license issued upon payment of these charges for the current season. No cutting to be done until license issues.

Parties making tender are to accompany their tender with a marked cheque for \$20,000.00 to be held as deposit, cheques to be made payable to the order of the Provincial Treasurer.

The Department does not bind itself to accept the highest or any tender.

Tenders to be enclosed in sealed envelopes marked "Tenders for Timber Berth," and to be addressed by registered letter to the Minister of Lands, Forests and Mines, Toronto.

Maps showing the berth offered for sale may be obtained upon application to the undersigned or from Mr. J. A. Oliver, Crown Timber Agent, Port Arthur.

BENIAH BOWMAN,

Minister of Lands, Forests and Mines.
Toronto, Dec. 22nd, 1919. 2-3

The following limits are offered for sale. Cruiser's Reports and blueprints where available will be sent to Principals or their accredited Agents:—

British Columbia, Prince Rupert District:—

160 acres freehold within ¼ mile of Skeena City on the Grand Trunk Pacific Ry. Estimated stand 5,000,000 bd. ft. within a few miles of Prince Rupert.

British Columbia R. R. Belt:—

Estimated stand approximately 300 million bd. ft. Capacity of mill 60,000 bd. ft. per day. The plant is on the main line of the C. P. R. and logs can be driven into the millpond at a minimum cost.

Quebec, Bonaventure County:

A Crownland limit of 4 sq. miles, estimated at 20,000 cords of Spruce and Fir is offered for sale. This limit is on Metapedia waters with a driving distance into the Metapedia, just above the Metapedia boom, of about 25 miles. The limit is about 14 miles from a station on the Intercolonial Ry. and the settlement extends back to within 3 or 4 miles of the northern boundary. Logs can be landed on a drivable stream for \$10.00 per M. bd. ft. and can be driven into the Metapedia boom for about \$2.00 per M. There should be a minimum profit in operating this tract of \$40,000.

BRADLEY & AVERY,
Timberland Factors & Cruisers,

The Use of Tractors in Woods

The early passing of the mule and the ox from the economy of logging operations in the Southern forests, to be supplanted by the gasoline driven tractor, was strongly indicated in the portion of the discussion of logging difficulties which ensued at the meeting of the Memphis, Tenn., section of the American Hardwood Manufacturers' Association, held recently. Testimony interjected by several of the manufacturers present showed that many of the lumber mill operators in the flooded woods of the South are turning to the tractor to get out the logs which they cannot bring out with mule or ox team. They stated that the tractor will go in and bring out logs where the mud and water would dishearten the mule and make him quit trying or bog the ox up so deeply that he could not pull. Stories were told of the tractor traveling along with its load of 8,000 feet of logs in twenty inches of water; of the breaking of a bridge and the pulling out of the tractor by its own power from the ditch into which it had dropped from the broken bridge; of a tractor which hauled 12,000 feet of logs out nine miles over a road upon which an ordinary log wagon could not operate, on a logging job near Vicksburg.

A correspondent pursued the discussion informally with several hardwood lumber manufacturers who are using tank type tractors or wheeled tractors in logging operations and got some information very flattering to the tractor. One man declared that "it is simply a question of dollars and cents;" in short, that it is too expensive to stick to the mule and ox teams. In his opinion, there is no longer any excuse for the use of anything but trac-

tors on large logging operations, and the only excuse for anything else on small operations is the fact that the firm doing the logging may not be able to afford the large original investment required for a tractor. Feed for live stock has gone out of sight, making the maintenance of mules and oxen a great burden. But a tractor can be operated on about \$5 worth of gasoline a day, to put it liberally. A good man can be hired to run the tractor for from \$6.50 to \$7.50 a day, while a "mule skinner" costs \$4 to \$5 a day. A ten-ton tractor will do the work of six and even eight mule teams of five each. Tractors of this size are regularly hauling six eight-wheel wagon loads of logs, and have been known to pull eight of these wagons. Tractors of the tank type will work where mule and ox teams are utterly ineffective. A tractor will often take the place of a short spur track to a logging operation.

The American Hardwood Manufacturers' Association has been gathering data for some weeks from its members on the possibilities of the tractor in logging and other lumber operations. A cursory digest of this information has convinced J. M. Pritchard, secretary-manager of the association, that the future is very promising for the tractor.

Rapid Depletion of Southern Timber

Five thousand sawmills in the southern United States will discontinue operations within the next few years owing to the decline in the supply of southern pine. This statement of Col. Henry Graves, Chief Forester of the United States Forest Service, is a startling reminder that the timber resources of America are not unlimited. The men who openly scoffed at the idea of such depletion occurring at all are being rudely awakened and a national forest policy is being advocated and considered with unusual interest in the United States.

The outstanding features of the forest policy recently enumerated by Col. Graves are: First, that the federal, state and municipal governments largely increase the area of public-owned forests either by purchase, or exchange for stumpage; second, that federal aid be provided to the states which are willing to provide the necessary machinery for the protection and reproduction of the forests. The scheme also suggests that assistance be given annually to timberland owners who may be prepared to practise forestry on their lands.

The first, and by no means the smallest, obstacle to such proposals is public apathy. A vigorous educational campaign will be

necessary to undo the work of those who persistently instilled the idea into the minds of United States citizens that the forests could not be exhausted. The people must be brought to realize the fallacy of such a doctrine and that only a united nation-wide effort can save a great national industry from decline. As soon as a public opinion has been aroused, a complete census of existing supplies will be necessary, for such information has never been brought together in the United States.

Canada is undoubtedly in a better position than the United States because a much larger area of her forest lands are still held under the Crown and exploitation has not proceeded so far. American governments have postponed action so long that the outlay necessary to retrieve their position will be enormous.

Timber Sales Show Gratifying Gain

According to a statement issued by the Hon. T. D. Pattullo, Minister of Lands for British Columbia, the value of Crown Timber disposed of during the past year aggregates \$654,372, as against \$259,769.13 for 1916; \$483,281.50 for 1917, and \$380,400 for 1918.

Vancouver and Island districts top the list at \$223,166.21; Fort George comes second with \$134,650.33, and Prince Rupert a very close third with \$133,596.98.

The number of sales and quantities involved is greater in every district than in any previous year. This increase is particularly noticed in the upper Fraser River district, east of Prince George, where over 56,000,000 feet of saw timber, besides a considerable quantity of ties and cordwood were disposed of as against 11,000,000 during the previous year.

Another noticeable increase is shown also in the Upper Thompson River district, north of Kamloops, where some 16,000,000 feet of saw timber and 390,000 ties were sold as compared with 12,000,000 feet and 78,000 ties in 1918.

The total number of sales for 1919 is 356 as against 133 in 1916; 255 in 1917 and 227 in 1918, while the area cruised for sales has increased from 23,318 acres in 1916 to 61,809 acres in 1919. It is pointed out by the minister that this striking increase in timber sales, involving the cruising of a much larger area, entails a good deal of additional work on the part of the forestry officials, as a consequence of which a reorganization of the department has been effected in order to cope with its growing business. Returned soldiers and men from the temporary staff already have been brought in.

In the matter of piling, the min-

ister's statement shows that over 4,000,000 lineal feet were sold in 1919 as against 378,000 feet in 1918 and a large increase also is noted in the number of cords of shingle bolts and cordwood.

Canadian Forests as Permanent Producers

In the amount of lumber cut, though not in its value, British Columbia has displaced Ontario as the premier province. The cut for the former for 1917 was 1.2 billion board feet, and for the latter 1.1 billion. Increasing ascendancy of British Columbia in this respect may be expected, since that province contains approximately half the merchantable saw timber of the Dominion.

It should be noted that the white pine cut of Ontario has diminished very considerably, due to depletion of virgin supplies, and that an increasing percentage of the spruce timber is going into the manufacture of pulp and paper, rather than lumber. Further, while extensive lumbering in British Columbia is of comparatively recent development, it has been going on in Ontario since a very early period, with consequent heavy destruction due to fires and the absence of restrictions upon logging methods calculated to leave cut-over areas in a productive condition.

The forests of British Columbia, like those of Quebec and New Brunswick, are administered by the Provincial Forest Service, a technical organization of trained foresters. This development has not yet taken place in Ontario, though representations have been made to the Provincial Government in that connection.

In Nova Scotia the appointment of a technically trained Provincial Forester is under consideration.

The importance of handling forest areas from the viewpoint of permanent production, rather than for immediate profit only, is becoming increasingly recognized.

Current Trade Conditions

(Continued from page 59)

scarcity of lumber in the hands of the manufacturers, according to Chicago advices. Idaho white pine is in big demand with prices holding exceptionally firm. Redwood also is in demand, but there is little to be had and prices are soaring. Bevel siding and finish show big gains in price, and lath and shingles are exceptionally scarce. It's the same story in cypress—high prices, a good demand, but stock sheets showing little to offer for immediate shipment.

The one subject for discussion in this market is prices. Opinions as to the near future differ, but even the most conservative manufacturers and wholesalers predict a higher level before values become stabilized. Small dealers are inclined to believe that there is a limit, and that stability is what is needed at this time to insure the predicted home building activity during the coming early spring season.

Great Britain

The monthly report of Alfred Dobell & Co., Liverpool, affords a very fair indication of the status of the British timber market on the present occasion. The import of Nova Scotia and New Brunswick spruce deals more than accounted for the consumption. There was a good demand and values were firmer all round during the past few weeks. In Douglas fir there was only a moderate demand; c. i. f. values have depreciated. The consumption of Scandinavian deals and boards was very satisfactory, while flooring boards were again in good demand at increased values. The total imports of pitch pine to Liverpool amounted to over 500,000 cubic feet, consisting of nearly 50% lumber. C. i. f. values for all qualities and specifications advanced considerably, and are very firm. Owing to the strong domestic demand in the U.S.A., Prime Qualities were difficult to obtain.

The improvement in the demand for hardwoods from the United States reported previously has been maintained during the past month, and values for all grades of lumber are much firmer, but the volume of business for forward shipment was restricted on account of the high prices demanded by Shippers. The Government Auction Sale of Hardwoods sold without reserve, on December 17th, attracted a large company. The bidding was brisk throughout, and the various stocks offered were rapidly disposed of at satisfactory prices.

The quantity of mahogany offered at the Auction Sale of De-

cember was small, and competition was extremely keen. The upward trend of values continued, and prices reached a still higher level. Sapeli Mahogany showing narrow stripe continues to be in eager demands for continental markets.

Mr. W. R. Hapkins, secretary of the Cardiff and Bristol Pitwood Importers' Association, has notified members that with regard to the control of pitwood he had been informed by the Board of Trade Timber Supplies Department that the limitation of prices on imported props was withdrawn and all restrictions removed. Up to the present the maximum price of 65s. has been in force.

The scarcity of tonnage is still most pronounced. Even America is unable to obtain anything like an adequate supply to meet her needs. She could do a much larger trade if only she could secure the necessary space, but she cannot. It will be seen, therefore, that a great many more boats are required to carry on the trade of the world, and that England is not alone in this respect. The call for tonnage is incessant, in spite of the fact that a large number of new steamers are continually being put on the water. It will take a long time to make up for the sinkings during the war. To bring the amount of the world's tonnage up to the pre-war level will, however, not be sufficient, as requirements in future are likely far to exceed that quantity.

"There is going to be a much bigger overseas trade done than ever before, and, therefore, a big increase in the world's tonnage will be necessary in order to cope with it. England must not be left behind; in this all important matter it will be necessary for us to keep abreast with the times, and consequently we must embark on an increased building programme. Other nations are doing everything in their power to increase the number of their steamers, knowing that, with an insufficient supply of tonnage, their trade in the future will be hampered considerably. "We must not sink from the proud position we held before the war in the matter of tonnage, though, if we do not look at it, we shall, as other nations are building faster in proportion than we are. There is little doubt that America sees the necessity of having more vessels, otherwise there would not be so many new boats coming under her flag. For the time being Germany is not able to do much in ship construction, though her enforced idleness is only of a temporary nature. Once she starts she will no doubt go ahead very quickly by building on the standardized system and confining herself to a few types," says the "Timber News."

ON CONDITIONS AT
HOME AND ABROAD**

Ottawa Prices Advance and Orders Increase

The prophecy made some weeks ago by Ottawa lumbermen, that prices were going to go considerably higher before the spring months has, in part, been fulfilled in the Ottawa lumber market, where prices generally showed a sharp advance, during the closing period of January.

With the recent aviation a new record for high prices was set, and those who late last summer and the early fall delayed buying and scoffed at the suggestion that good pine siding would ever reach \$120 per thousand have been set at naught. It costs the buyers now just \$125 per thousand to purchase inch and a quarter, inch and a half by 8 in. and for 2 by 7 in. and up. Incidentally 1 by 7 in. advanced another \$5 per thousand and from predictions made to the correspondent of the "Canada Lumberman," "the end is not yet."

All pine with the exception of the red grades, showed advances ranging from \$2 to \$15 per thousand, the greatest jump of all being taken by 2 in. good pine strips which travelled from \$90 to \$105, per thousand feet.

The market all around appeared to be based on real "bed rock" with indications pointing that the "bottom" was going to grow harder and more secure. As against this optimistic outlook, there was a growing scarcity of foreign cars, and the still unknown yield of this year's bush operations. On the extent and cost of the bush operations will depend the price of sawn lumber for several months to come. Indeed they appeared to be the governing factor by which the manufacturers were to be guided.

Outside of the advances in price the features of the Ottawa market were; increased orders and inquiries, a shortage of stocks, and the general expression of confidence by the trade that the year of 1920 was going to be a banner one for lumber sales and uses. Events and happenings in markets kindred to and having a bearing upon the lumber market, justified the existence of such an outlook. Briefly the situation appeared to be that dealers are not looking

for any new business. Rather the demand, asserting itself, came to them. They were more concerned about meeting and filling the orders of their old customers than trying to hunt up new sales. If they had the stock they, in most cases, got the prices they asked for it, and if the customer thought it was too high or wanted to grumble the stock owner was smilingly willing to keep his stock, and passed up the sale with the confident expectation that before the spring months had passed, he would receive more money for it.

The general feeling is that prices while establishing a high record now, will further carry and go higher before next June.

For one reason or another, there had previously been a feeling in some circles that the price of lumber had to come down. The prices asked were too high. Talk of further increases in price, were to the minds of some, mere bosh. Individuals holding such views last summer and fall, who did not buy, figuratively "kidded" themselves. There is nothing in the symptoms or conditions surrounding the Ottawa market, to indicate or warrant the price of lumber coming down. Nobody a year or so ago thought lath would go to \$15 per thousand, but the fact that buyers are finding out today is that it has. So it is with lumber.

Builders and contractors, together with the great army of lumber users anywhere naturally, register a strenuous kick about every advance in price. Often perhaps in the past they have been justified. But in the present instance, they can either pay the price asked and get it, or grumble, and go without. The dealer or the holder of the stock hardly needs to worry as within the next four or five months, indications are that prices will be still higher.

The public and buyers naturally enough look to the manufacturers to bring down the price of lumber and be the court of first relief. What many of them fail to consider is that lumber production in the Ottawa Valley has every year for the last three years been getting lower, in regard to the log output and the sawmill run.

For war and other purposes the demand on lumber stocks was heavy, and now that a revival of building is taking place in the

ST. JOHN, N. B.

United States and Canada there is a strong and insistent call for lumber, with stocks much lower than what they were four or five years ago. Besides the shortage of stock, many persons have failed to grasp the fact that lumbering and logging operations have brought with them, their increased cost of production just the same as anything else. Food and labor in the woods camps, are higher, freight rates have increased, and the cost of doing business has advanced. Lumber has been one of the last commodities to advance in price during the war, and lumbermen assert that, in the ordinary course of events, it can be expected that it will be one of the last to drop following the cessation of hostilities.

Increased production in the woods and a reduction in food and labor charges seem to be about the only thing that justifies the price of lumber coming down.

The first month of the new year did not bring any signs of a reduction in the cost of labor, or the price of food.

The actual extent of bush operations are of an unknown quality. So far as compared with December and the early part of January, the situation showed little change. Reports indicated that some camps were running as high as from seventy five to ninety per cent. of the production expected. The log output of others dwindled downward. As effecting the future prices the whole question, outside of demand, apparently is buried in the woods.

In export business to the United Kingdom and Europe the situation showed little change. The feeling for the future of this market was that it was going to be a good one and command higher prices even in face of increased competition by foreign competitors. An opening up of shipments was not expected to take place until late April or early May.

General conditions with woodworking plants did not show any change. The plants remained fairly busy considering the season of the year, and the prospect was that there would be a heavy run on sash and doors, in the spring months, due to the expected increase in building operations. Building permits issued at Ottawa during December 1919 showed a substantial advance in the value of prospective building as compared with 1918. The real estate market also showed most promising signs, indicative that a greater volume of building, than for the past four years, was to be undertaken.

Lath remained pretty well off the market, though there continued to be a good demand. Shingles were only fair, and the spruce grades of lumber though not showing any exceptional activity remained absolutely firm.

St. John Reports Higher Prices and Active Trade

The last two weeks have certainly been the best two the lumber business has seen at St. John in as far as prices are concerned. Any merchants, who are fortunate enough to have any stocks available for immediate shipment are getting for 2 by 3 and 2 by 4 about \$45.00 on cars, 2 by 6 and 2 by 7 bringing the same; 2 by 8 \$48.00 to \$50.00, with 2 by 9 and 2 by 10 \$53.00. All random 8 to 20 feet long merchantable spruce boards is bringing \$38.00 to \$39.00 on cars same point. Refuse commands about \$30.00.

About all the stocks here are cleaned up and a great deal of car shipping has taken place. Cars are fairly plentiful for foreign shipment and it is a great help to the country at large for it is all the people have to depend upon. Laths are simply a commodity equal to gold. Anyone who has any can get any price asked—We know of one concern on the North shore which received \$16.00 per thousand Canadian funds, f.o.b. cars shipping point—cash—for winter's cut. This was paid by an Ontario brokerage house—Laths are selling here at \$14.00 on cars but really only a car or so for sale.

The St. John correspondent of the "Canada Lumberman" adds: What will happen in the market for the coming season it is almost impossible to forecast. One guess equals another. Certainly the American market is going to absorb about all the probable winter cuts—and no doubt a great lot of early Spring and Midsummer stocks from larger mills. If all the building takes place in the United States which is needed, there will be a steady demand for everything in sight—This does not consider the English market at all. Really they are only beginning to waken up and the last few days have seen some improvement on this market. We would believe that they are not aware of the conditions here or they would be buying. If they do not buy soon, all cuts will be taken up.

British and American Buyers Busy in East

Nothing has taken place to darken the horizon of the lumber trade at St. John. While considerable cold weather has caused local business to show easing up, still the factories are very busy on old orders and the yards, which are connected with the factories, need a breathing spell to try to tidy up. Prices have not weakened and stocks are not heavy as far as local conditions are concerned. Practically all the country stocks are being shipped to United States

points, and very little of this rotary stock finding its way to market at St. John. The mills are all idle, having finished the season's sawing, and are now being repaired for next season's work.

The British market seems to be showing signs of improvement. The buyers are beginning to look around and seem to have come to a conclusion that they might as well buy as wait until it is too late. United States is buying every winter-and-early-spring cut possible to find at good prices, taking the run of the mills at around \$38.00 on cars and paying for it in American funds, which is equal to around \$40.00 per M on cars, St. John and vicinity, and they are paying these prices for poor rotary sawn stocks. There does not seem to be any large quantity of this stock offering on the market, as many mills which were to start have been short of labor.

The majority of log operators on the head waters of the St. John have finished yarding their logs and are hauling. Many of them have long hauls with log haulers. The cut for St. John will be as follows:—

A. N. Nobles for Stetson, Cutler & Co.	about 8 million feet
Flavien Cheound for Murray & Gregory	" 4 "
Currier for Stetson, Cutler & Co.	" 5½ "
Sullivan & McCormack for Murray & Gregory	" 3½ "
Pelletier for Stetson, Cutler & Co.	" 1 "
Cunliffe Bros. for Stetson, Cutler & Co.	" 14 "
In all about 36 million feet.	

Montreal Reports Stock Low and Prices Firm

Some Montreal wholesalers are in the unfortunate position of having orders, but no stock. The scarcity of lumber has become accentuated and there is no relief in sight. "Unless I am greatly mistaken," said one wholesaler, "we shall witness a famine in a very short time."

In the local market there is a scarcity in some lines, which is enough to be felt. The car shortage is the main cause of the limited arrival of B. C. woods this month. The demand for western stock is heavy, and up to the present more car loads have been sold so far in January than the whole of last month. The American market is still strong, showing a decided increase over last month.

The shipments of lumber from the port of Montreal during the 1919 season totalled 144,375,182 ft. b.m. compared with 58,39,019 ft. b.m. in 118. The total was the largest for many years, and consisted mainly of lumber shipped to the United Kingdom on British Government account.

Why Birch is in Urgent Demand

It was rumored recently that the furniture manufacturers of Canada would shortly wait upon the federal authorities at Ottawa, asking that an export embargo be placed on birch, urging the necessity for so doing on the ground that practically prohibitive prices are being asked for this wood, which is now so largely used in all cabinet work. It appears, so far as can be learned, that there is little foundation for such a report, and even if a move were made on the part of the furniture manufacturers, the lumbermen, who specialize in birch, would, possibly, present a counter plea that owing to the rapidly ascending price of furniture, it might be well to have the present protective duty of 30 per cent., plus the war tax of 7½ per cent., abolished and thus allow Canadians to acquire household equipment at a more reasonable figure.

Speaking of the present value of birch and the rumored attitude of the furniture manufacturers, a leading wholesaler stated that the prices of birch to-day, delivered in Canada, were considerably less than those across the border, f.o.b. shipping point. On all grades from 4/4 to 8/4 the average quotation in the Dominion is several dollars less than Michigan or Wisconsin mill prices and on the thicker lines the rate ranges still lower per M.

"One reason that the price is stiff at present," he continued, "is that furniture manufacturers are now eliminating oak owing to the staggering figure which values in that wood have reached, and are now turning their attention more particularly to birch. The result is that the excessive demand is naturally causing prices to climb. Thus the present wide requisition for birch has been largely brought about through the action of the furniture men in concentrating more on this wood than on any other at this period. It is one of the leading hardwoods of Canada, and being right at home, manufacturers have, naturally, reverted to it in preference to other lines which have to be imported."

"I think I have stated enough to show that there has been no undue profit made or any selfish move made on our part," he concluded.

It is the little things that make the home attractive. Something more than four walls and a roof are necessary. One of these things is a fire place.

Wm. Gerry & Sons, of York St., London, intend erecting extensive lumber sheds.

The sawmill of Campbell & McNab, Douglas, Ont., was completely destroyed by fire. The loss is covered by insurance.

The Fesserton Timber Co., Limited, of Toronto, have become members of the National Hardwood Lumber Association, Chicago.

Jas. McBurnie, Jr., who owned a small sawmill in Widdifield, was killed recently by the falling of a tree. He leaves a wife and eight children. He was well known in North Bay and locality.

The general offices of Terry & Gordon, in the Confederation Life Building, Toronto, have recently been enlarged. Much needed accommodation has been secured by taking in several adjoining rooms.

Garlock-Walker Machinery Ltd., Toronto, was recently incorporated, with a capital of \$500,000, to manufacture and deal in machinery and equipment of all kinds, and to take over and carry on the business now known as the Garlock-Walker Machinery Co., Limited, Toronto.

The mills at the Chaudiere Falls, Ottawa, have been much affected by the recent cold weather, and the late violent storm. J. R. Booth's paper mill was partially closed down and the power companies had great trouble with anchor ice which is more difficult to handle this year than for many winters back.

Hon. Justice Kelly, sitting at the Winter Assizes, Hamilton, reserved judgment in the action of Butler vs. the Hamilton Lumber Company. Eighteen plaintiffs sued the Hamilton Lumber Company, C. H. Taylor and F. W. Brennen, for \$2,000 and costs for alleged misrepresentation of the prospectus relating to the Hamilton Lumber & Coal Company.

The Dominion Railway Commission recently in the matter of the application of the Riordon Sales Company for suspension of the Canadian Freight Traffic Association's order relative to rates on wood pulp to Seattle and Tacoma, granted the request, thereby restoring former rates. The majority of the shippers agreed, if necessary, to assume cost of local rates from Vancouver to the United States points.

Reports from practically all the neighboring rural districts around London indicate that more wood and lumber are being produced than for many years. This fact is due to the severe windstorm which swept over Ontario several weeks ago. In many districts large numbers of fine trees were blown down, and these are being converted into wood and lumber. In some districts the sawmills will be busier than for many years.

Firstbrook Bros., Limited, of Toronto, are completing a new plant at Thessalon, Ont., for the making of box shooks. The industry will require from 8,000,000 to 10,000,000 feet of lumber per year, and it is expected that operation will begin early in April. W. R. Benson, superintendent of the company's plants in Toronto and Penetang, has been spending some time at Thessalon, looking after the erection of the new unit in that city.

Representatives of the Dominion Commission of Conservation lately had a conference with the Ontario Government in reference to the conservation of timber areas and reforestation. Plans were discussed for a survey of the timber wealth of the province. The deputation was composed of Messrs. James White of the Commission; Mr. Clyde Leavitt, Chief Forester, and Mr. R. D. Craig, the Commission Forester in Ontario. It was received by Premier Drury, Hon. Beniah Bowman and Mr. Zavitz, the Provincial Forester.

Mitchell Bros., Holland Centre, Ont., who are manufacturers, dealers and exporters of hardwood lumber, report that on account of scarcity of good bushmen they are not taking out much timber from their own limits this winter, but expect to buy from the farmers most of the stock they will require for the coming season. The local and export demand for hardwood lumber is strong and the firm have now export orders for 1,000,000 ft. In 1919 they exported some 500,000 ft. of hardwood.

Few people in Old Ontario and not many in Northern Ontario realize the extent to which the pulp and paper industry has grown in that section of the province. Perhaps the greatest producer of the area is the Abitibi Company, and this industry, practically in its infancy, made a remarkable production last year when the average output per day was 150 tons of sulphite; 300 tons groundwood pulp; and 250 tons of newsprint. Plans are now going ahead and in a short time an additional 200 to 250 tons will be turned out each day or a total around 500 tons. The average production in 1918 was 220 tons.

Eastern Canada

The sawmill of Auger & Leclerc, Lotbiniere, Que., was completely destroyed by fire. The owners contemplate rebuilding immediately.

Wm. F. Cooke and Sydney P. W. Cooke were recently registered in Montreal as wholesale lumber dealers, under the name of Cooke Bros.

The Owes Head Lumber Company was recently registered in Totton, P.Q. W. C. Perkins, N. R. Aikenhead and F. H. Perkins are the registered partners.

The Laurentide Co., Ltd., Montreal, P.Q., have been incorporated with a capital of \$35,000,000 to take over and acquire as a going concern the business now being carried on by the Laurentide Co., Limited.

Martin McPeak Lumber, Ltd., Montreal, P.Q., has been incorporated to manufacture and deal in lumber, timber and wood products of all kinds. Capital \$50,000. L. A. Martin and J. Archambault, of Montreal, are among the incorporators.

The Ideal Shoulder Pad Co., Ltd., has been granted a federal charter with a capital stock of \$49,000, and headquarters in Montreal. The company

is empowered to manufacture shoulder padding and men's and boys' clothing, trousers, overalls, etc.

Rapid progress is being made by the Dry Dock and Shipbuilding Co., at East St. John. A breakwater 7,070 feet long has been constructed and the excavation is nearing completion for the dry dock which will be 1,150 feet long, 133 feet wide and 42 feet deep.

The Eastern Canada Saw Mills, Limited, have been formed, with a capital of \$250,000, and have opened offices at 604 Shaughnessy Bldg., Montreal. The company are manufacturers and exporters of rough and dressed lumber. Mr. Stanley G. Denman is the managing director.

Messrs. Champoux Bros., of Campbellton, N.B., have purchased a controlling interest in the Matapedia Lumber Company, with mills at Milmikek. This company has in past seasons cut about five million feet of lumber, which under the new management will be increased.

The Town Council of Grand Mere, P.Q., have accepted an offer made by the Laurentide Company, Limited, to spend for the welfare of the town, the sum of \$50,000 per annum for twelve years, of which \$40,000 will be spent on permanent improvements and \$10,000 for administration.

The offices of the Imported Timber Disposal section of the Board of Trade, England, have been removed from the St. Nicholas Bldg., to the Shaughnessy Bldg., Montreal. This department of the Board of Trade has the handling of the lumber bought in Eastern Canada by the British Government.

Speaking of the recent severe storm in New Brunswick, a Fredericton paper says the snowfall is exceptionally welcome to lumbermen all over the province, however, as they were in a bad way for facilities to carry on their log hauling operations, there being less snow in the woods than for many years at this time.

The Canada Lumber and Box Company, Limited, is the name of a new company which has commenced the manufacture of boxes at Limoilou, Que. The president is Mr. Noel Belleau, the vice-president Mr. L. Bolduc, and the directors, Messrs. R. F. Seale, L. J. Conway, and C. S. Garneau. Mr. Conway is the manager. The company will make a general line of boxes.

The Kent Lumber Co., Granby, P.Q., are erecting a sash and door factory and planing mill, 38 x 80. The equipment, which is electrically driven, includes a full line of sash and door machinery, in addition to planers, moulders and a matcher. A shavings exhaust system is being installed. About twenty men will be given employment, and the plant is expected to be in operation February 1st.

The Quebec Railway, Light, Heat & Power Company is stated to be negotiating with a syndicate with a view of disposing of part of their line. With the construction of a line up the Murray River to Lake St. John and thence to Chicoutimi, the extensive pulpwood lands of the Saguenay River will be tapped. The Delaware and Hudson Railway Company is stated to be interested in the deal.

Eugene Patenude, of Nominique, Que., who is a well-known contractor and lumber merchant, is engaged in changing over certain machinery in his mill and getting ready to saw twice as much during the coming season as during the past. Mr. Patenude expects to have his improved plant in full operation about June next, and reports that the prospects for the coming year are exceptionally bright.

Canadian Paper Barrel Co., Ltd., Montreal, P.Q., have been incorporated with a capital of \$500,000, to operate sawmills and to manufacture and deal in timber, lumber and wood products of all kinds, and to acquire timber limits and operate pulp and paper mills, and to carry on business as dealers and exporters in paper and paper products of all kinds. C. Sinclair and R. E. Allan, advocates, Quebec, P.Q., are two of the incorporators.

The limits in Quebec owned by the Portneuf Pulp & Lumber Co., of Albany, N.Y., comprising 484 square miles, and reported to be the best on the North Shore, have been sold to the Wayagamack Pulp & Paper Co., Limited, of Three Rivers, Que. It will be remembered that only a few weeks ago the company purchased the valuable Breakey limits in the Gaspé Peninsula, so that now the Wayagamack Co. holds timber far in excess of the requirements of its mill.

Brompton Paper directors recently fulfilled expectations by advancing the quarterly dividend from 1¼ per cent. to 1½ per cent., thus placing the common stock on a six per cent. basis. Anticipations of a further increase were encouraged. The vice-president, Mr. Beauclerk, stated that two of the American subsidiaries, in which the Brompton concern owns all the common stock, would show earnings of some \$300,000 for the last calendar year and that it was possible "to look forward with hope for further dividends from the earnings of subsidiary companies."

The E. Burt Lumber Company has recently been improving its sawmill at Burt's Corners, N.B. A larger boiler has been installed and the engine room has been enlarged. The company, at the head of which is Mr. E. Burt, expects to cut 5,000,000 feet of logs during the winter, which will be taken out along the Keswick River. So far this year there has been a very light fall of snow and operations were impeded to a certain extent by the lack of a sufficient quantity to begin hauling. However, conditions have improved of late and hauling is now in progress on the Keswick and Tobique Rivers.

The T. M. Lewis Lumber Co., Ltd., Vancouver, B.C., has been granted a federal charter to carry on business as timber merchants, and to own and operate sawmills, shingle mills, pulp and paper mills, and to manufacture and deal in lumber, sash and doors, portable houses and wood products of all kinds. Capital \$10,000. T. M. Lewis, lumberman, and J. S. Jamieson, barrister, both of Vancouver, are among the incorporators.

Woodsmen employed in piece work in the Idaho camps are reported to be making as high as \$10 a day. Many employed for the regular wages, \$5.50 a day, which is a big wage for the woods, are changing to piece work and thus almost doubling their receipts. Large numbers of discharged soldiers are finding jobs waiting for them in the woods.

PUTS AIR TO WORK

A system that is designed right means less friction in pipes; consequently a large power saving. Sturtevant Systems are right and stay so.

A Typical Sturtevant Made-to-Requirement Planing Mill Exhaust System

KEEP YOUR PLANING MILL "CLEAN AS A WHISTLE"

Sawdust and shavings removed directly from the saws and planers, do not get on the floor, scatter, and hide parts of moving machinery. The workmen are not endangered nor are accidents possible which often result in costly injuries.

Sturtevant
(TRADE MARK)

PLANING MILL SYSTEMS

remove the sawdust before it gets into the room; therefore, your workers are given better air to breathe, production is accelerated, and the men are happier. The Sturtevant System is built with great care and to your requirements. All the galvanized iron piping, hoods, and collectors are built to measure—to fit your machines and the rooms they are going into. The fans and fan wheels are very rugged and assure operating satisfaction under severe strain. There is a distinct advantage and assurance of satisfaction in having a system built in one factory where your complete interests are supervised. Many of these systems have been put in operation in the United States and Canada and all are working to the entire satisfaction of the owners.

LEVIATHAN-ANACONDA

A REAL GUARANTEE

Our responsibility for each LEVIATHAN and ANACONDA Belt extends beyond payment until the belt has earned in actual service its full cost as compared with the service of any other belt of any kind, under the same or similar conditions, barring accidents.

We regard this as the only guarantee that is fair to the buyer.

THE NEW MAIN CATALOGUE

Our New Catalogue is ready.

We believe it to be one of the finest reference works on power transmission, conveying and elevating, yet published. A worthy addition to a manufacturer's office library.

It is profusely illustrated and contains a mine of information, the work of many technical experts of broad practical experience.

A few pages are occupied with a short history of the first primitive appliance used for transmitting power, then through the experimental stages of leather, rubber and balata, right up to the present-day superfine products known as Leviathan-Anaconda Belting.

Numerous photographs show these belts under actual working conditions, and with each is a carefully prepared talk in explanation.

Many original drawings and a number of rules and tables for the information and guidance of belting users, together with price lists, combine a work which will solve many of your problems and be of inestimable value.

This book will soon be in the hands of Belting users throughout Canada. We will be pleased to send you a copy immediately, upon request, carrier charges prepaid.

The edition is limited.

DISSTON-SAWS

THE BEST KNOWN SAW IN THE WORLD

Each year finds a greater number of leading mills using Disston Saws exclusively. Mill operators know that the success of their mill—the quality and quantity of lumber they turn out—depends on the saw they use.

It is natural, therefore, for them to choose Disston Saws—the acknowledged standard in quality for 80 years.

GOOD YEAR MADE IN CANADA EXTRA POWER BELTING

Pulling the Peak Load

Nearly every industry has some belt-drives with variable loads.

Nearly every industry has had belt trouble when the peak came on these drives.

One of the best things Goodyear Extra Power Belting does is to take care of peak loads without trouble.

How it has solved one peak load problem is told in a letter to us from the Chisholm Milling Company (reprinted here).

The very qualities which give Goodyear Extra Power its great advantage where loads vary, make it a better belt for all-round use.

The pulley-gripping friction surface pulls over the stiff places and prevents power waste through slippage.

The great strength of the fabric plies which are welded into one by much fine rubber, gives very long life.

Practically all the stretch is taken out of Goodyear Extra Power before you buy it—saving costly shut-downs to tighten belts.

The fine rubber, which seals the seam, prevents ply separation.

Over 1000 Canadian industrials have found Extra Power Belting an economical proposition—in price, in length of service, in efficiency of service. Some of them have solved problems exactly similar to yours. Let a Goodyear-trained belting man tell you about it. No obligation. Just phone, wire or write the nearest branch.

Corn rolls and degerminator in the Chisholm mill.

The Chisholm Milling Co.
CEREALS, GRAIN AND FEED
TORONTO

The Goodyear Tire & Rubber Co. of Canada, Ltd., Toronto, Ont. Nov. 15th, 1919

Gentlemen:—

About five years ago we bought our first Goodyear Extra Power Belting. To-day half our belts are Goodyear Extra Power, and as fast as old belts wear out we are replacing them with Extra Power. The performance of the first belt has brought about this change.

We were having trouble with our corn degerminator. Every now and then the machine would stick. Although we were using the highest priced belts we could buy, they continually burnt through when the sudden load of a sticking degerminator came. One expensive belt went in two days. The next one lasted but little longer. Then we tried a Goodyear Extra Power Belt. It gave us 18 months' service. When the degerminator stuck, Extra Power just seemed to buckle down to the job and pulled right through the peak load. It wasn't long before we decided to use Extra Power Belts on all our equipment.

Now we have installed them on grinding mills, corn mills, shaft drives, etc.

We figure that we save a great deal in price, save power, and get surer service.

Yours very truly,
The Chisholm Milling Co., Limited

W. Flegg

ALPHABETICAL INDEX TO ADVERTISERS

Would You Spend \$575 to Save \$2,000?

Last Fall a certain lumber concern in Ontario purchased a small 10 H.P. Double Drum Belt Driven Hoist from us for handling logs. This machine cost them \$550, plus \$35, freight, total \$575. They operated this small Hoist by a belt from a gasoline Engine, the whole making a light, compact, portable outfit, easily moved from place to place.

They were able to work this outfit in the coldest weather, and found that it did the work of three or four teams.

As it required only one man to operate the Hoist, it is easy to figure the daily saving effected by the use of this machine. In other words, compare the wages and board of one man and the cost of a little gasoline with the wages and board of four drivers and the feed and upkeep of eight horses.

This machine handled up to one thousand logs per day.

We make these machines for either Steam or Gasoline Power, and in 7 sizes, one of which should be just right for your use.

TRADE MARK

Kendall Gang Circular

The Machine that will convert your small logs into more and better lumber, quicker than ever before.

The illustration shows one of the latest designs of gang circular patented by Mr. I. N. Kendall, the well-known millwright, of Ottawa. This machine takes 16-26 in. diam., 10 gauge saws—will cut cants up to 8 inches in thickness, and we furnish with it necessary saw collars for any thickness of lumber desired. It has a hollow mandrel, water cooled saws; each saw has a separate guide; easily accessible and readily adjustable, and the bridge tree is so designed that it can be removed, the saws taken off and a new set put on in 7 to 10 minutes. Safety fingers hung just inside the front press roll prevent a cant flying back off the saws. Lumber cut on these machines is guaranteed to come out absolutely true to size from end to end, and so smooth that 1/16 in. over size is all the allowance necessary for finish.

Read what one user says about it:—

"The machine has given every satisfaction and in many cases far exceeded my idea of sawing lumber; the proof of this being that our customers are paying me \$1.00 to \$1.50 per thousand more for certain classes of lumber than they can purchase same quality elsewhere—this advantage being purely on account of the uniform and smooth sawing this saw is capable of doing."

We are the original manufacturers of these machines

We have been manufacturing them for the past fourteen years, and the experience gained in all those years is at your disposal. We make these machines in three sizes, as follows, using

- 26-in. saws for 8-in. cants, as illustrated.
- 32-in. saws for 10-in. cants.
- 36-in. saws for 12-in. cants.

Each size is of the very latest design and up-to-date in every improvement.

May we send you a list of satisfied users?

We also make a complete line of twin circulars with chain or steam feed for slabbing logs for these machines.

VIVIAN B. SMITH
ARCHITECT
GUARANTEE TRUST BUILDING
ATLANTIC CITY, N. J.

June 18, 1919.

The Beaver Board Co.,
1033 Calvert Building,
Baltimore, Md.

Gentlemen:

It is with pleasure that I give you this brief outline of my satisfactory experience with Beaver Board. I recently superintended the three-million dollar housing proposition for the Bethlehem Steel Co., at Baya Landing, N. J., in which there was approximately five-million feet of various wallboards used. In this operation, we learned from experience that coveboard, applied in a cheap way, are expensive at any price.

The Beaver Board that was used was entirely satisfactory and my advice to prospective users of wallboard is, first to get a good board; secondly, to use the co-operation like that offered by the Beaver Board companies in properly laying off and designing for effect, and thirdly to be certain that it is properly applied and finished. If this is done, most excellent results can be obtained. I can recommend Beaver Board to anyone who will follow this simple advice.

Yours very truly,
V. B. Smith

ARCHITECT

SOMERS LUMBER CO.
LUMBERMAN AND WOODWORKER
OFFICE: 2105 N. MINNISTON ST.
ATLANTIC CITY, N.J. June 16, 1919.

The Beaver Board Companies,
1033 Calvert Bldg.,
Baltimore, Md.

ALL AGREEMENTS ARE FURTHER SUBJECT TO THE TERMS AND CONDITIONS OF THE BEAVER BOARD COMPANY'S GENERAL CONDITIONS OF SALE, WHICH ARE OBTAINABLE UPON REQUEST.

Gentlemen:

It is hardly necessary for us to tell you of the satisfaction we are having in the handling and sale of Beaver Board, for you must surely have been aware of this long ago.

To begin with, from a dealers standpoint, it is as good a commodity to handle, for it not only carries a desirable margin of profit as the average stock we handle, but there is satisfaction in knowing that this stock is obtainable when you want it. We have also found that by handling Beaver Board, we have increased our other sales, for with each Beaver Board order, additional items of moulding and lumber are required.

There is considerable satisfaction also in handling the real Beaver Board rather than a mere wallboard, for we find that the cooperation and assistance and service offered by the Beaver Board Company has helped us to double our original wallboard business. We say nothing as to the satisfaction a dealer has in handling any product of a supremely high grade.

Our relationship has been very pleasant, and we are delighted to give you this letter to use, if you so desire.

Yours very truly,
SOMERS LUMBER COMPANY.

DEALER

SATISFACTION

"Satisfaction for all parties concerned" is just the kind of performance that can be expected from Beaver Board.

Here is an example from Atlantic City. The four letters illustrated above testify to good work accomplished, for architect, dealer, builder and owner. Each letter is an expression of satisfaction. Each letter shows how Beaver Board has measured up to demands from the four corners of the building trade.

There is more than individual satisfaction in this performance for the *lumber dealer*. It means a closer relationship with the architect and the builder while it is building up good will with the owner. It means more business and greater profit.

ATLANTIC CITY, N. J. July 16, 1919.

The Beaver Board Companies,
 1633 Calvert Building,
 Baltimore, Md.

Gentlemen:

It is with pleasure that I write you of my recent experiences with your Beaver Board. My attention was called to the reconstruction and addition to a building at 3705 Winchester Avenue, this city. After going into details as to the best possible reconstruction of this building I decided to use on the interior walls your Beaver Board. There was seven thousand square feet of this material used in this building. The different rooms of this building were laid out in panels and in connection with this I used Belgian bronze brick for the fire places and in decorating used a putty color with cream ceiling with the result I have a very pretty and artistic interior.

I must say Mr. Wm. Riddle our ex-mayor of the city, who is the owner of this property, is highly pleased with this work. The building has been leased to a wealthy family from Philadelphia and they are carried away by the appearance and sanitary condition that this building presents.

If all my experience in the future with your Beaver Board are as satisfactory as this one I shall be greatly pleased.

Very truly yours,
 SAMUEL H. HEADLEY.

BUILDER

OWNER

The Beaver Board Companies,
 Baltimore, Maryland.

Gentlemen:-

We are pleased to state that our experience with Beaver Board has been highly satisfactory. Our entire large basement rooms were Beaver boarded two years ago. The test we have given it would be a severe one to any walls, for the basement is not only naturally damp on account of its depth but the openings on one side of the room directly face the ocean. The walls and ceilings are today in excellent condition, and we do not hesitate to say a good word for the merits of the genuine Beaver Board.

Yours very truly,
 Wm. Riddle

Link-Belt Saw Mill Chain

"H" Class Link-Belt for refuse and sawdust, has proved its durability by years of operation in lumber mills. Ample metal in the link assures long service. Rotation or rocking of pins is prevented by T-head rivets held securely between lugs cast on one side bar.

An instance of the service-giving qualities of this chain is furnished by the following:

In 1915 we furnished to one of our Washington customers a shipment of H-480 chain for handling hog fuel. This chain was sold on a two-year guarantee, and replaced some steel box chain. It has been in use four years and eight months, and the customer has been carrying a duplicate chain in stock for over two years, which has never been required.

The Carriage You Are Looking For

Our No. 1 Size

CARRIAGE—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1 3/4 in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

SET WORKS—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

FEED WORKS—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

The Quality Standard that Produces "Plus" Service Belting

The only sure way to get satisfactory service is to buy products of known worth.

In Dominion Rubber System Belting, the worth is known because every ounce of material—each individual operation and each finished belt must test up to the highest quality standard ever made for belting.

From the time the materials come into our factory until the belt is running on your pulleys, there is no chance of your getting anything but "plus service" belting.

This is the result of over fifty years of belt making experience and research by the oldest, largest and most completely equipped rubber organization in Canada.

The rubber that goes into Dominion Friction Surfacing Belting is not a mere waterproofing substance—our chemists have given it a far greater value by making it into a friction compound that prevents practically all power wastage on the pulleys.

"Plus service" includes the free technical advice of our belting engineers who are ready to help you with your transmission and conveying problems without placing you under obligation to us.

A phone call, wire or letter to our nearest branch places all of our facilities at your disposal.

Do Your Planers and Matchers Balk at 300 Feet Per Minute?

Are you letting real dollars-and-cents profits slip through your fingers because of slow-feed, worn-out or small capacity machines with their high operating costs and small production of poor quality work. If so, you owe it to yourself to investigate the H. & B.

No. 115 Fast Feed Planer and Matcher

—the greatest development in fast feed machinery, producing 250 to 300 feet per minute of the finest grade flooring, dimension, shiplap and baseboards and, when equipped with a Profiler, working ceiling, partition, mouldings and all novelty drop sidings at the same rate of feed and in many cases raising the grade from 30 to 50 per cent.

No. 115 is built in two sizes to surface up to 9 and 15 inches wide respectively, each size to joint from $\frac{3}{8}$ -inch to 6 inches thick. It will produce more and better lumber per minute, per day or per thousand feet of rough stock handled than any machine of its class on the market.

Learn more about the No. 115 and its possibilities for lower costs and added profits in your mill—we'll send you all the facts on request. Write today.

DIXIE DRAG SAW

A 4 H. P. Portable Single Cylinder 2 Cycle, Gasoline Rig, upon skids. Weight, 280 Lbs. Makes 125 strokes per minute. Cuts Logs 7" to 72" Diameter.

Easily started and moved. Runs as smoothly as the Liberty Motor. The Solution of the present and future Fuel, Labor and Car Shortage. Economical of fuel and never grows weary.

Saves Labor. May be taken to the Forest for cutting Logs, Fuel and Short Bolts for Stave, Heading, Shingle Bolts, Handle, Charcoal and Alcohol Wood.

When not required for sawing, Dixie Engine may be used for driving Pumps, Dynamos, Churn, Feed Cutters, Mixer, etc.

Price \$225.00

Extra 5 ft. or 6 ft. Saws, each \$12.00
Extra 6½ ft. or 7 ft. Saws, each \$14.00

F. O. B. Cleveland.

Manufactured By

The Peter Gerlach Company

Cooperage Machinery and Saw Makers

Established 1854

CLEVELAND, OHIO, U.S.A.

BRAND
Pure Wool Underwear

O.V. (Ottawa Valley) brand has been worn for fifteen years by Canada's nation builders—on railroads, farms and the Empire's battlefields; in mines and in construction camps. Made for warmth and durability, in medium and heavy weights, in combinations and two piece suits. Guarantee with every garment.

Moderate prices.

Sold throughout the wholesale trade only.

"ASBESTOL" Gloves and Mittens

have been tested and found worthy.

Lumbermen like "ASBESTOL" because they stand the gaff. They stay soft and pliable and render the kind of service that pleases.

Be sure the "ASBESTOL" trade mark is stamped on the gloves you buy.

Mortise Chisel**

An exclusive feature of Tapatco Pads is the Tapatco Stapling Device.

U.S. Patent Dec. 1, 1914
Canadian Patent April 6, 1915

This gives a firm hold and makes the hooks secure, long after the fabric itself has become weakened by use.

See that you get "the pad with the felt washer under the hook staple." For sale by Dealers everywhere. If you have any trouble in securing these Pads, write direct to our Chatham office.

Right willingly they tug—

When their necks are comfortable

The work your horses do, depends largely upon the condition of necks and shoulders. That's where the strain comes, as they tug at the traces. That's where protection is needed. The only proper protection is that afforded by stuffed collar pads such as

TAPATCO

REGISTERED TRADE MARK
BRAND

Made of a splendid grade of drill, stuffed with a special composite "stuffing," these Pads fit snug to the neck, absorb the sweat, and so completely "cushion" the shoulder muscles that the comfort of your horses is ensured.

Think of the loss you suffer when horses are laid off—do away with sore shoulders by this sure protection, and so keep your horses at work every working day in the year.

Tapatco Pads are soft, springy, absorbent—they prevent galled, bruised and chafed shoulders.

THE AMERICAN PAD & TEXTILE COMPANY,

Chatham, Ontario

"Thirty-eight years making pads."

USE YOUR MOTOR TRUCK

Erect gin poles where logs are to be stored and let your truck do all the stacking at these locations.

BAY CITY WINCHES

will meet your needs better than any other equipment on the market. Other designs made for loading trucks and trailers. Write for pamphlets on this equipment.

Bay City Foundry & Machine Co.
1601 Water Street - BAY CITY, MICH.

The above illustration portrays our circular saw mill. We manufacture this model on 12 and 16 foot carriages.

We manufacture all kinds of Sawmill and Woodworking Machinery. Write us for further particulars. We can solve your machinery problems

THE BERTRAND CIRCULAR SAW MILL

This model is of modern design and has been giving complete satisfaction to millmen throughout the Dominion. Of the best materials and made by the most skilled workmen this machine is rapidly becoming known for its smooth working qualities and its dependability of operation without repairs.

This is an advertisement in the Graton & Knight campaign on Standardized Leather Belting. It appeared in the Saturday Evening Post, January, 3, 1919.

This 18-inch Spartan Double Belt was installed July 1917 in the plant of the Western Malleables Co., Beaver Dam, Wis. It has been frequently exposed to steam without injury.

This Husky Belt Stands Steam

STEAM quickly plays havoc with most belts. Not so with this Spartan Leather Belt, which for more than two years has been frequently exposed to this destructive agency.

Why? Because it is made of Spartan Leather—a specially tanned leather which resists exposure to steam, oil, chemical fumes, heat, and other conditions which quickly destroy ordinary leather.

The greater load-carrying power of Spartan is due to its unusual pliability and high coefficient of friction.

With production costs at unheard-of levels, Spartan's wonderful efficiency is of more interest to you today than ever before.

Spartan is one of the Graton & Knight Standardized Series Leather Belts. In that Series, there is a belt standardized for every drive. Write for our book, "Standardized Leather Belting."

The advice of our Engineering Department is at your disposal on any power-transmission problem. Ask us questions about belts and their uses and treatment.

THERE IS NO DRAG!

- An Aloxite Saw Gumming Wheel cuts clean.
- There is no drag—no rasping or tearing—no unnecessary friction.
- Just free, fast cutting, without drawing the temper or case hardening the saw teeth.
- Every hard, sharp, tough Aloxite grain works just like a tiny lathe tool—cutting easily, smoothly.
- Aloxite Wheels are made for saw gumming in just the right grits and grades and shapes.
- They will do everything a good saw gumming wheel should do—plus.

Ban on Cheapness

"Proctor"
DRYERS

There is something worth while in the establishment of a reputation for quality. The manufacturer reputed to make the best veneer, has the best chance for the most desirable business.

The former disposition in the trade to see how cheaply, instead of how well, veneer could be produced, has been a plague to the veneer industry.

It is advantageous to seek for the premium that comes with the quality guaranteed by the "Proctor" Veneer Drying Machine.

The Philadelphia Textile Machinery Co.

Oldest and Best

HOE

Chisel Tooth Saws Choice of Lumbermen Everywhere

The even temper of these saws and the fine quality of steel from which they are made have proved Hoe saws reliable for nearly one hundred years.

More than one hundred thousand "Hoes" are to-day successfully sawing lumber in all parts of the globe. The Hoe Chisel Tooth Saw, invented 40 years ago, is still the best for cutting hardwood.

Special Flanged Shanks and Superior Bits Supplied

R. HOE & CO. 504-520 Grand Street New York City

America's Oldest Saw Manufacturers

Rubber Goods FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "P.M.S.," "Special Drive" and "Lion" are our leading brands for power transmission.

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

Hose for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

LUMBERMEN'S

EQUIPMENT

Standard ^{aⁿ} Heavy Duty Sawmill Carriages

Here shown is our heavy duty 3 block No. 40 steel saw mill carriage, the knees of which recede 40" from saw line. We can furnish this carriage in any number of blocks or axles, also equipped with steam set works attached to either our No. 3 or No. 4 set. This splendid

machine contains many improved features and its efficiency is well known throughout the lumber mills of Canada.

Send for catalogue and detailed information of any machinery you require.

Sawmill Machinery

The Waterous Circular Resaw

This machine is specially designed for handling rough, knotty slabs or thick lumber indiscriminately. It is very heavy and substantial, and will give satisfactory service under the severest duty.

Besides being able to stand more hard usage than a Band Re-Saw, its first cost is considerably less, as is also the cost of maintenance. When used on slabs, the extra sawdust—in excess of that cut by a band re-saw—coming, as it does, out of the slab or waste portion, is unimportant, and thus the machine is practically as economical as a Band Re-Saw for this purpose.

One of our customers who uses a four-log gang, a circular, and one of these Waterous Re-Saws, states that the latter regularly handles 600 logs, each 16 feet in length, per day of eleven hours, besides all the slabs, which contain at least one board 3 inches wide and 6 feet long each, from 500 other logs. The 600 logs referred to are first sized by the circular into 6-inch squares by running them through to make two thick slabs and two thin ones, and then sent to the re-saw. If the log will not size to 6 inches square, the circular splits it into two thick slabs and sends the two slabs on to the re-saw. The timber that our customer is cutting is hard spruce, and is so hard that he informs us that he is obliged to change saws four times during the daily run of eleven hours.

LONDON AGENTS—THE PROJECTILE CO.

American No. 77A—Model 5

Mr. LUMBERMAN:

Has your Superintendent or Foreman suggested or insisted upon the need of a fast feed matcher in your mill?

If so, have you investigated the qualities of "AMERICAN MACHINES"?

We suggest that you write to any of the following—All users and SATISFIED:—

T. H. Hancock Toronto.	Adams River Lumber Co. Chase, B.C.
Wm. Copping Joliette, Que.	Giscome Lumber Co. Giscome, B.C.
Ladder Lake Lumber Co. Ladder Lake.	Mundy Lumber Co. Three Valley, B.C.
Prince Albert Lumber Co. ... Prince Albert, Sask.	Mickle Dymont Gravenhurst, Ont.
W. C. Edwards Lumber Co. ... Ottawa, Ont.	Mickle Dymont Toronto.

Following is a copy of our advertisement which appeared on this page Dec. 15th, 1918:

"Are You Preparing for Peace Time Business?"

Or are you going to wait and see how things are going? Hustle a little harder now and doubtless you will have all the business you can handle by Spring.

You have every reason to feel confident of the future. Houses are scarce everywhere. The shortage must be made good.

Individual effort is necessary to the continuance of prosperity. Don't wait to see what your neighbor is going to do, get busy yourself.

For ourselves we are working along the lines that Nineteen Hundred and Nineteen is going to be one of our best years. We are making arrangements to handle more lumber than ever."

We feel the same about 1920

The Lumber Grader

In lumber manufacturing plants it is the Grader who has the last word in determining quality. Every board and timber must pass before his eyes and the grade mark he puts upon them is based solely upon the established grading rules that govern him. Skill, intelligence and pains-taking care he must have but, most of all, he must have experience—for only practice makes perfect. In its thirty years of lumber making The Long-Bell Lumber Company has developed graders of good judgment and to them can be traced directly the chief reason for the uniform quality of Long-Bell lumber. That both dealer and consumer may be positively assured of obtaining lumber that has passed the inspection of these trained men it is branded with this trade marked name:

Long-Bell
THE MARK ON QUALITY
Lumber

When your customer talks about roofing or siding

you'll be doing a good stroke of business—and you'll win his respect for sound advice on building if you tell him about

BRITISH COLUMBIA RED CEDAR SHINGLES

the building material that is unequalled for either roofing or siding.

It resists decay—a mighty important point where it is exposed as in roofing or siding—and the nature oils in Red Cedar are decay resisting above anything that man has ever invented or discovered.

Here's an illustration—We have in our office a shingle taken from a roof after 67 years of service. It's sound as a dollar except for the mechanical action of the elements.

It is artistic—gives a finished appearance to any building—something every man wants—lends itself to any type of building with effective results.

It is economical—lives up to its slogan—"Longest life at lowest cost"—will stand cost comparison with any rival product—and will outlast any.

Send for a supply of our Dealer's Booklets—gives full information on above points—many other valuable pointers for the man who's going to build—Sent free on request.

Many Eastern Canadian Firms have never used either WESTERN SOFT PINE or WESTERN YELLOW LARCH.

The extremely heavy demands for lumber in 1920 may force them to use these woods. We hope so, and also that some of our product may be available, for we know we will then have made many life long friends.

Our Service Yard is maintained for Service

We have the lumber—but more than that we can get it to you **quickly**. Orders that come into this office are shot out of our Logansport (Indiana) Yard at top speed. This is merely one mark of the efficient service that is shown all our customers.

Nothing but the best quality stock ever leaves our Logansport Yard. The fact that we invite inspection there means that our customers **must** be satisfied.

“LUMBER”

The important history of this word is at present being written. A commodity that is being carried high on the flood of universal demand, far beyond the powers of Production and Distribution.

In the maelstrom of supply, demand, low production and car shortage, we are striving to serve our clients with their demands for B.C. Forest Products, to the best of our ability.

Quebec Harbour Is Unequalled as a Shipping Port for Lumber

Quebec City is within six days' run from Liverpool, and can be reached at all stages of the tide, the river being well buoyed and well lighted. It is 500 miles nearer Liverpool than New York, the latitude being 46.48 degs. N. and the longitude 71.13 degs. W.

The Harbour of Quebec offers unequalled facilities to the Shipping Trade, and is supplied with City Water and Electric Light and Power Installations.

It is spacious, deep and well protected.

It has:

Eleven Landing Sheds containing 523,000 square feet of floor area.

Deep Water Berths for 22 vessels drawing up to 40 feet.

50-Ton Floating Crane.

Gantry Dock Cranes and Locomotive Cranes, available at all times for handling cargoes.

One Grain Elevator, capacity 250,000 bushels.

One Fireproof, Concrete Grain Elevator, capacity 2,000,000 bushels, with grain galleries and conveyors.

Loading capacity 60,000 bushels per hour. Grain Dryer, Richardson Separator, Bagging Shed, etc.

Special facilities for bunkering vessels.

Rail Connection With All Railways.

The Port of Quebec Possesses:

Two Graving Docks:

One 600 feet long by 62 feet at entrance.

One (new) 1,150 feet long by 120 feet wide at entrance, capable of taking the largest vessels, with repair shops in connection capable of executing all required reparations.

Further particulars and Plans of the Docks and Wharves upon request to:

THE SECRETARY-TREASURER
Quebec Harbour Commission
Quebec, Canada

Province of Quebec

TIMBER LANDS

License or permission to cut timber on public lands in this Province is acquired at public auction, after due notice has been given, subject to a yearly ground rent per square mile of \$6.50 for the years 1919-20 to 1923-4 both inclusive and of \$8.00 for the years, 1924-25 to 1928-29 both inclusive.

The timber cut in virtue of such license is subject to a tariff of dues fixed by order in council.

Licensees are forbidden to cut on Crown lands trees less than a fixed diameter.

The Regulations also provide that all timber cut on Crown lands must be manufactured in Canada.

In the event of a licensee wishing to transfer his rights, he is at liberty to do so under certain conditions, namely, the paying of a fee of \$4 per square mile.

There are at present time about 75,000 square miles of forest lands under license and over 150,000 miles in the possession of the Crown.

WATER POWERS

To obtain authorization for the utilization of a Water-Power in the Province of Quebec, application should be made to the Honourable Minister of Lands and Forests.

Water-Falls capable of developing over 200 H.P. are granted under emphyteutic leases, the conditions of which are upon the following lines:

1.—Duration of the lease, from 25 to 99 years, according to the importance of the water-power and to the amount of capital required for its development.

2.—Payment of a yearly rental which does not vary during the term of the lease, for the land granted, counting from the date when the contract was signed.

3.—An additional yearly charge of from 10 to 25 cents per H.P. developed, according to the geographical situation of the site of the water-power; such charge being payable from the time the power is produced.

4.—The charge referred to in article 3 is subject to revision every 21 years, counting from the signing of the contract.

5.—Delay of 2 years for beginning works and 2 further years for producing power.

6.—The lessee to make a deposit in money or in securities as a guarantee of good faith for the carrying out of the contract. Such deposit may be forfeited if the conditions are not fulfilled; but, in the contrary case, it may be refunded after a certain time.

7.—Lastly, the grantee must submit plans of his works, mills, etc., to the Department previous to their installation, and, when such installation is completed, he must keep the Department informed as to the quantity of power produced.

SIMONDS

Circular Saws

For the mill or woodworking shop saws that stand up to the work are a source of gratification to the filer or sawyer. It is safe to assume that the mill owner or operator will be the first to appreciate the economy of such saws. Less repairing and fewer delays mean the cutting of lumber cost if the saws

cut the lumber as do **Simonds**. Our Inserted Tooth Rip and Cut-Off Saws are leaders in their field. They are economical because the teeth, which are renewable, stay in the plate and are strong and durable. **Simonds** Solid Circular Saws have long set the standard of **Quality and Efficiency**.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 40

Toronto, February 15th, 1920

No. 4

Co-operation, Service, Progress, Production and Expansion

The Twelfth Annual Convention of the Canadian Lumbermen's Association, which organization has during the past two or three years grown rapidly in membership, influence and prestige, has passed into history. The ancient and historic city of Quebec was the scene of the 1920 deliberations of this progressive and energetic body, and no happier selection could have been made. Friends from the West greeted those from the East, and the spirit of unity, comradeship and co-operation, which characterized the proceedings, struck a new altitude and augurs well for the weal and expansion of this great national federation.

Many problems were discussed and the industry reviewed from every standpoint. While many unusual conditions surround logging and lumbering at the present time and there are a number of disturbing factors, such as the labor element, high rate of exchange, taxation, lessened production, abnormal demand and mounting prices, there were no pessimist utterances or gloomy forebodings. On the other hand, there was every disposition evidenced to face the future dispassionately and intelligently and in a broad fraternal spirit.

Service and co-operation is the motto of the Canadian Lumbermen's Association, and, as was pointed out, the objects of the Association, which was organized in August, 1908, are to promote the interests and conserve the rights of those engaged in lumbering operations or in the manufacture, sale or distribution of lumber; to protect its members against unbusiness like methods in the wholesale and retail lumber trades, to foster such trades and reform abuses therein where they exist; to secure freedom from unjust or unlawful exactions, to diffuse accurate information among its members, and to secure uniformity in usage, custom and trade conditions.

This was the slogan sounded twelve years ago, and the record of the organization shows that it has lived up to its ideal through many trying periods, and emerges today stronger and more aggressive than ever. Its work has bespoken its worth and the one outstanding evidence that the Canadian Lumbermen's Association enjoys wider esteem and greater confidence than ever is its rapidly-increasing membership and the number of influential men from all parts of the Dominion who take an active part in its proceedings and serve on the board of directors or on permanent committees. The cause is regarded a worthwhile one, and in matters of legislation, transportation and general conditions governing the industry, much has been accomplished. There is, however, a great deal more to do, and each succeeding year fresh problems and new difficulties crop up. With courage and optimism these have been surmounted in the past and will be dealt with in the future in the same spirit of tolerance, mutual helpfulness and unity.

This edition of the "Canada Lumberman" is largely given over to a record of the proceedings of the Canadian Lumbermen's Association convention, and a perusal of all that took place will be found helpful and instructive. The different questions dealt with, the policies announced, the personnel of the new officers, and the work in hand for 1920 are all fully outlined. There is no necessity for calling extended attention to what has been done or is likely to be undertaken. The fact remains that the lumber industry of the Dominion has never attained such a status and prestige as it enjoys today, and in contributing to this satisfactory situation, the members of the Canadian Lumbermen's Association have played no unimportant part.

The association idea is growing in all walks and activities of life. What may be one's firm difficulty today may be our own tomorrow. Not one is exempt from the troubles and obstacles which confront the other, and it is only by sharing the burdens that all participate in the benefits. The Canadian Lumbermen's Association has shown it has the necessary insight for the solution of many perplexities, and in these epoch-making days is doing valuable work in helping to adjust the new problems which changing conditions have forced to the front, and in this undertaking the best thought, judgment and energy of the leaders has been brought to bear. In the interests of conservation, greater production, higher efficiency and the re-establishment of industrial and commercial activity, the organization is doing yeoman service for the lumber industry in the Dominion.

All this brings up the question of the legitimate function of trade organizations, and drives home the conviction that the "go-it-alone" policy has had its day. The one of the present and the future is "pull together" and "get together." Of this advance in co-operation a leading authority has wisely and pertinently said: But the first essential of co-operation is education. No matter how much we may desire to pull together, anarchy results if we do not proceed according to a plan devised by intelligence and tested by experience. There are many to give advice but few who are capable of carrying out the practical details of co-operative activity. Expert analysis and direction must be had, or the experiment fails and once more it will be said men are inherently incapable of long working together for the common good. Get together and keep together.

Canadian Lumbermen Hold Big Convention

Gathering in Quebec City Was Decided Success—Forward Movement of Industry—Progressive Measures Adopted—Gratifying Reports Presented

"The best ever," "the greatest yet," "the most satisfactory in results," "a decided success," "a fine gathering." These and similar expressions of endorsement and satisfaction sum up the proceedings of the twelfth Annual Convention of the Canadian Lumbermen's Association, which was held in Quebec City on Wednesday and Thursday, February 4th and 5th.

The attendance was the largest in the history of the Association; the business sessions were marked by enthusiasm and cordiality, and the spirit of comity and co-operation characterized the gathering. Everything went off with a swing and a go. Fraternal greetings were conveyed by representative men from across the line who bore messages of goodwill and encouragement.

One noticeable feature of the convention was the splendid attendance from the East, many of the largest operators being present and taking an active part in the discussion. The addresses were all brief, pointed and forceful. There was not an unpleasant incident, and all the members seemed determined to grapple with the problems of production, manufacture and distribution and play their part both as individuals and as a national body in the continued expansion and upbuild of the lumber industry of the Dominion.

The business sessions brought forth many valuable suggestions in regard to the conservation of timber, a larger production of forest products during the coming year and the consolidation of the industry for the benefit of both seller and buyer.

President Power, in his annual review, gave a comprehensive grasp of the association spirit permeating the business fabric, as evidenced by the splendid gathering. He warmly greeted the distinguished visitors from across the border and announced that the problems which the lumbermen of the two countries had to face at the present juncture, were largely identical in scope, purpose and character.

A number of important resolutions dealing with conservation and reforestation, business taxation, national survey of the timber wealth of the Dominion, through freight rates, etc., were presented.

Possibly the most important was that relating to the Business Profits Tax, which recently expired. The convention went on record as opposed to the re-enactment of this measure, which it was asserted had proved inequitable in principle and operation to individual initiative and enterprise. The members strongly approved of the continuance and extension of the present income tax in conformity to the necessities of the Government to meet its incurred obligations ensuing out of the great war.

The Social Features Enjoyed

Socially the delegates and their wives and daughters had much to attract and entertain. The ladies were present in a larger number than in any previous year, and were recipients of much attention on the part of the Quebec hostesses. Their stay was rendered all the more delightful by the thoughtful care and superb arrangements of the Quebec local committee. The hospitality of the lumbermen and the citizens of Quebec was extremely pleasant. Under the chairman-

ship of Sir Wm. Price, the local committee left nothing undone that could minister to the enjoyment and happy associations of those who were fortunate enough to be present at the gathering. There was something doing every minute outside of business hours, and the Quebec reception committee earned the well-deserved thanks and appreciation of every delegate. They undertook things on a large scale, and all the details were admirably executed. No one was overlooked, and from the arrival of the guests on Tuesday until their departure on Friday every attention and courtesy was bestowed upon them. The local committee consisted of Sir Wm. Price, K.B., (chairman), A. G. Auger, Major H. R. Goodday, John Levie, C. V. Norris, R. Quirouet, Lieut.-Col. Walter J. Ray, George A. Staton, H. R. Van and Paul G. Owen, (Secretary).

The only unpleasant incident of the Twelfth Annual Convention of the Canadian Lumbermen's Association was the accident which befell James G. Cane of Toronto, a director of the Association. For this mishap no one was to blame. In company with several others, at the C. P. R. station Mr. Cane entered one of the large sleighs which were in waiting to convey the visitors from the West to the Chateau Frontenac. On the way up Palais Hill, the whippletree broke and the team became unruly and started down the steep incline. The loaded sleigh slid for some thirty or forty feet and then overturned, throwing the occupants heavily on the ground. Mr. Cane sustained a compound fracture of the shoulder-bone, and was removed to the hospital. On the following day, through the kindness of the C. P. R., who provided a parlor car, he was conveyed to his own home in Toronto. Mr. W. J. Lovering, accompanying him all the way. Mr. Cane is now making good progress towards recovery, but will be laid up for some time yet. Mrs. Perry, wife of E. F. Perry of New York, Secretary of the National Wholesale Lumber Dealers' Association, was also shaken up, but was able to leave her apartment in the hotel after a couple of days' rest. Mrs. O. Page of Montreal, also suffered some from the shock.

The Record of Great Gathering

The 1920 convention of the Canadian Lumbermen's Association will long be remembered for its agreeable associations, representative attendance, business-like proceedings, trade inspiration, social enjoyment and increasing growth, influence and usefulness.

The newly-elected officers are alert and full of vim. The next convention will be held in Ottawa. It was felt that in order to preserve an even balance and consider equitably the requirements and representation of the different provinces, that the National Capital would be the most logical and convenient rendezvous for next year. The 1919 gathering was held in St. John, and that of 1920 in Quebec. The East having had the honor of being the scene of the assembly for two successive years, it was unanimously decided that Ontario should have the pleasure of welcoming the lumbermen from far and near in the Spring of 1921. Ottawa secured the convention without any dissenting voice.

Re-elected Director for three years

Hon. Honore Mercier, Quebec, P.Q.,
Who spoke at the Annual Banquet

THE RESOLUTIONS ADOPTED BY THE DELEGATES

Moved by A. C. Manbert and seconded by A. E. Clark—that whereas the Business Profits Tax of 1916 has expired by the effluxion of time, it is the judgment of the Canadian Lumbermen's Association, in convention assembled, that the tax be not re-enacted as it has proved inequitable in principle and operation to individual initiative and enterprise; that this Association, however, approves of the continuance and extension of the income tax in conformity to the necessities of the government to meet its incurred obligations arising out of the war; that this Association calls upon its Executive to appoint a strong committee to deal with the matter as its consideration shall arise in parliament and in council.

The Preservation of the Forests

Moved by W. E. Bigwood and seconded by Hugh McKay—that this convention of the Canadian Lumbermen's Association, realizing as it does the great importance to Canada of the preservation and reproduction of the forest resources of Canada hereby endorses the work of the Commission of Conservation in conducting a survey of the forest resources of the country, and the investigation of forest reproduction, and that the Dominion Government be urged to provide the necessary facilities for the early completion of these investigations.

Increasing Export Trade of Canada

Moved by W. E. Bigwood and seconded by A. E. Clark—that having in view the great disparity between the imports and exports of this country and the resulting effects upon the value of our currency in American exchange, be it resolved that the Canadian Lumbermen's Association desires to go on record as being strongly in favor of doing everything to increase the exports of all classes of materials, whether manufactured or the natural products of the forest, farm, mines or fisheries, and that a copy of this resolution be sent to the Dominion government and that the incoming Executive be requested to take such steps in the premises as may be necessary for the carrying out of the spirit of the resolution.

Providing Through Commodity Rates

Moved by A. E. Clark and seconded by George W. Grier—that whereas the situation frequently arises that sales of lumber are made for delivery from a given point on one line of railway to a destination on some other line, between which points the railway companies have no through commodity rates in effect, be it therefore resolved, that the Canadian Lumbermen's Association in annual convention assembled, authorizes the incoming committee on Transportation to take such steps as may be necessary to obtain the filing of tariffs

by the railways providing through commodity rates between points on two or more railways, said rates to conform to rates for similar mileage between other points, which may be in effect already.

The Hospitality of Quebec Citizens

Moved by Hon. J. P. Burchill and seconded by W. C. Laidlaw—that the sincere thanks of the Canadian Lumbermen's Association be tendered to the Reception Committee and the citizens of Quebec generally for the hearty welcome and entertainment provided for the delegates during their visit to the city and especially to the ladies accompanying the delegates. We deeply appreciate the courtesy and kindness which has contributed to make our visit so pleasant.

Sympathy Expressed for Mr. Poliwka

Moved by R. E. Stocking and seconded by David Champoux—that the members of the Canadian Lumbermen's Association in attendance at the convention have learned with sincere regret of the illness of H. B. Poliwka of J. Burstall & Co., Quebec; Mr. Poliwka being the local representative of this Association would have been actively engaged and interested in the carrying out of the splendid entertainment provided by the Quebec lumbermen and his genial and courteous presence is much missed. We hope, however, that he may soon recover his health and be with us again at our next meeting; be it resolved that a copy of this resolution be forwarded to him with the best wishes of this meeting.

The Accident to Mr. J. G. Cane

Moved by George W. Grier and seconded by B. H. Dunfield,—that the Canadian Lumbermen's Association tender our good friend and loyal advocate and supporter of the Association, James G. Cane, of Toronto, their feeling of deep concern as the result of the accident which Mr. Cane sustained while coming to the convention and express the earnest hope that no serious consequences will ensue as a result; and that a copy of this resolution be sent to Mr. Cane.

Many Organizations Tendered Thanks

Moved by W. E. Bigwood and seconded by W. T. Mason—that the thanks of the Canadian Lumbermen's Association be tendered B. A. Neale, manager of the Chateau Frontenac, the officers of the Garrison Club, the Curling Club and the press of Quebec City for their kindness, courtesy and co-operation in making the convention such a success. Votes of thanks were also passed to Mr. Beer, city passenger agent, Toronto, Mr. Snell, general passenger agent, and Mr. Tremblay, travelling passenger agent of the Canadian Pacific Railway for their care, attention and thoughtfulness in looking after the transportation and comfort of the delegates.

OFFICERS AND DIRECTORS FOR THE COMING YEAR

President—Dan McLachlin, Arnprior, Ont.

1st Vice-president—W. C. Laidlaw, Toronto.

2nd Vice-president—Angus McLean, Bathurst, N. B.

Transportation Committee—A. E. Clark, Toronto; (Chairman); E. R. Bremner, Ottawa; W. B. Snowball, Chatham, N. B.; J. Fraser Gregory, St. John, N. B.; A. H. Campbell, Montreal; W. T. Mason, Montreal; Gordon C. Edwards, Ottawa.

Legislation Committee—Dan McLachlin, Arnprior, Ont. (Chairman); A. C. Manbert, Toronto; A. E. Clark, Toronto; Lieut.-Col. R. M. Beckett, Quebec; George W. Grier, Montreal; Angus McLean, Bathurst, N. B.; W. E. Bigwood, Toronto; W. B. Snowball, Chatham, N. B.

Executive Committee to be appointed by the President.

Directors for three years—James G. Cane, Toronto (re-elected); W. J. Bell, Sudbury, Ont. (re-elected); Duncan McLaren, Toronto (re-elected); Arthur H. Campbell, Montreal; Sir William Price, Quebec; Rufus E. Dickie, Stewiacke, N. S.; W. B. Snowball, Chatham, N. B. These were the seven directors elected at the convention in Quebec to serve for three years.

Those who are now on the board to serve two years are—W. E. Bigwood, Toronto; Gordon C. Edwards, Ottawa; A. E. Clark, Toronto; Walter M. Ross, Ottawa; W. Gerard Power, St. Pacome, Que.; Alex. MacLaurin, Montreal, Angus McLean, Bathurst, N. B.

Those who will serve one year more are—E. R. Bremner, Ottawa; Dan McLachlin, Arnprior; W. C. Laidlaw, Toronto; George W. Grier, Montreal; D. Champoux, Restigouche, Que.; J. Fraser Gregory, St. John, N. B.; Sir D. C. Cameron, K.C.M.G., Vancouver.

The next convention will be held in Ottawa in February, 1921.

Quebec Reception Committee, to which much praise is due for their active work and co-operation in making the 1920 convention held in the Ancient Capital such a splendid success was composed of Sir William Price, Chairman, A. G. Auger, Major H. R. Goodday, John Levie, C. V. Norris, A. Quirocut, Lieut.-Col. Walter J. Ray, George J. Staton, H. R. Van and Paul G. Owen, Secretary.

Present membership of the Canadian Lumbermen's Association 160, an increase of 25 members since the 1919 convention held in St. John, N. B.

Jas. G. Cane, Toronto, Ont.
Re-elected Director for three years

Sir William Price, Quebec, P.Q.,
Newly elected Director of C. L. A.

Arthur H. Campbell, Montreal
Newly elected Director of C. L. A.

Angus McLean, Bathurst, N.B.,
Elected Second Vice-president of C.L.A.

PRESIDENT POWER REVIEWS TRADE CONDITIONS

President W. Gerard Power, in his annual address to the members touched upon many vital questions and on certain points, particularly with respect to co-operation, production, labor and the stamping out of Bolshevism left no uncertain note. He said:

Gentlemen let us rise to the full dignity and appreciation of the importance of the lumber business. We can point with pride to our record during the war. Let it be our mission to carry on the great industry we have inherited and from those who went before us, so that we in turn may hand over to those who come after us an industry conserved from the growing sappling all the way down until the finished product is shipped out. Let us work together in harmony and close brotherhood so that we may not only reap the financial rewards but that we may deserve and enjoy that which money cannot buy, a conscious rectitude of having performed our duty to the fullest extent. A new dawn has broken and we have turned our faces toward the light.

With the lessened production of lumber both in the United States and Canada during 1919 owing to a variety of causes, among which may be mentioned the high cost of operating, the undoubted curtailment so far as United States is concerned is owing to the business tax. It is stated as a fact that 26% of the production in the South ceased operation at the end of 1919 because the timber has been cut out and production has been behind consumption since the beginning of 1919. This in conjunction with the undoubted necessity that exists for new construction on this side of the water, throughout the devastated portions of Europe and the enormous building programme of the Motherland would seem to preclude any possibility of considerable drop in prices for lumber. In the province of Ontario stumpage and dues today amount to very high figures. Then the wholesaler and the exporter have to contend with rapidly increasing transportation charged both rail and ocean, and the curtailment or abolition of many of the facilities which have hitherto been provided by the railways. In these circumstances consolidation of interests is the most natural thing in the world to happen. Undoubtedly the Association spirit is permeating our business fabric as evidenced by the splendid gathering I see before me and the fact that the two great United States Hardwood Lumber Associations during 1919 got together and adopted one standard set of hardwood grading rules.

Consolidation Makes for Efficiency

One lesson the war has taught us is that consolidation of large industries is not of itself a public menace—much less an evil. Indeed under proper conditions a consolidation or amalgamation or even a working agreement may be proved to be of particular benefit to the community at large. One factor may be safely accepted and that is consolidation makes for higher efficiency—reduced cost of manufacture and consequently direct advantage to the consumer.

The subject of the taxation of business is one which this Association at this meeting might very advantageously address itself. There is no possible room for doubt that such taxes tend to lessen production; as, should an industry increase its production, thereby enlarging the volume of business, while at the same time its capital investment remains the same, under a law of this kind such industry would be penalized through said Excess Profits Tax. The function

of Government is to serve, not to oppose, and the greater the service, the more beneficial and effective the Government. I hope this subject will be discussed thoroughly at this meeting, and I think a strong resolution should be passed whereby the C. L. A. will go on record as being opposed to the re-enactment of the Business Profits War Tax of 1916.

The question of labor, with its attendant demands of wages and hours is one of the most important matters with which we have to deal. I hope discussion upon this line will develop during our deliberations. In another report to be presented to you reference is made to the various labor Conventions which have taken place both in the United States and Canada. In considering the industrial outlook, we must look out for the industry.

Wages Jump up and Production Sags

We are told by financial experts that we must all produce more and spend less. To this labor replies: "An eight hour day with ten hours' pay and forty-four hours per week." But statistics of an investigation conducted in the United States show that wages per man per hour had increased 240 per cent. while the product per man per hour had decreased 62%. The consumer is the one who pays for this in the final analysis. We are told also that "Satan finds some mischief still for idle hands to do," and if the laborer will not occupy his spare time usefully then mischief will certainly woo him, and the step from loyal citizenship to Bolshevism is only a very short one. It would be an interesting comparison to place the actual working hours of any so-called employer here present alongside the actual working hours of his employees?

There can be no question with regard to our attitude towards Bolshevism. I would like to quote an extract from a speech by His Honor, Governor John J. Cornell of West Virginia before a recent Convention held in Pittsburgh. He says:—

"Face to face as we are with the program of radical leaders, we must meet it now and meet it in the open. The veil must be stripped from their plans and the men within the unions, as well as without, must be shown first the program and second the consequences of any attempt to carry it out. The men who work with their hands are, as a rule, the most patriotic of men. Millions of them are home owners, a much larger percentage than in any other country on earth. Many of them, however, do not have time to read and analyze and they are growing more and more dependent upon the information, the ideas and the philosophies of their union officials; many of whom have obtained their positions because of their skilful discussions, their ability to portray the wrongs done the workers and the beauties of some idealistic and socialistic governmental theory. Counter propaganda is imperative. There must be a campaign of education to counteract the poison being poured into the veins of the public by the American Lenines and Trotskys." This applies with equal force to Canada.

Maintaining the Value of Canadian Dollar

The question of the tremendously adverse rate of British Exchange merely means that a price sufficient to cover any possible

loss will be demanded for our exportable products. We must see to it that the Canadian dollar does not suffer depreciation and Canada's destiny lies in the direction of enlarging her production of those items which other countries of the world most urgently need, and when the people of the Dominion realize that every purchase of an unnecessary or luxurious article is directly interfering with the future prospects of the Dominion we shall perhaps be able to reduce the adverse trade balance against us to more comfortable and advantageous proportions.

The wonderfully strong financial position of Canadian Banking institutions, coupled with the ability of our people to absorb the tremendous Bond issue must be a source of gratification to us all.

We are very glad indeed, to welcome our good friend, Mr. A. C. Manbert to this Convention. Mr. Manbert, as you all know, went to England last Spring representing the lumber manufacturers of Ontario, at least that was his mission, but on arrival in England Mr. Manbert found conditions of such a nature that being the man he is he could not confine himself solely to one Province. He took the larger view and the lumber trade of Canada is debtor to Mr. Manbert for probably the most valuable service that has ever been rendered to this country by any representative of a trade organization sent over there. We are glad that Mr. Manbert went over and we are all equally glad to welcome him back again.

Those Who Have Gone Beyond

It is with feelings of great regret that the death list among our members and friends has been so heavy during 1919. Mr. Hiram Robinson, Mr. R. M. Cox and Mr. Geo. M. Mason, all of Ottawa, will be sadly missed, and an old and respected member of the trade, Mr. John Donogh, of Toronto, and Mr. G. Harry Askwith of the Riordon Pulp & Paper Company, also passed to the Great Beyond. Suitable condolences were forwarded by your Executive Officers in these cases.

WORK OF THE EXECUTIVE COMMITTEE

The Executive Committee's report which was read by W. T. Mason, of Montreal, covered a wide range of matters that had come up during the past year, the majority of which have already been referred to in the columns of the "Canada Lumberman." The report said in part:

At the last annual meeting of the Canadian Lumbermen's Association certain recommendations made by your executive committee at that time were adopted. Among the most important were resolutions regarding the restoration of pre war conditions at as early a date as possible, copies of which resolutions were sent to the Acting Prime Minister the Hon. Sir W. T. White, Minister of Finance, with request that same be cabled to the Rt. Hon. Robert Borden, in England. This was done, but owing to a variety of reasons, some of which will be dealt with in this report, we have scarcely yet returned to pre war basis, so far as the export trade of this country is concerned. The position demands the most careful consideration of the whole trade.

After referring to the National Industrial Conference held recently in Ottawa, the report says:

A distinction should be drawn between Canadian organized labor and the propaganda which has been very assiduously circulated throughout Canada, particularly in the West by I. W. W. agitators. An amendment to the Criminal Code by Order-in-Council, effective October last, had the effect of making I. W. W. organizers amenable to the Canadian law and undoubtedly has checked their operations. However, the O. B. U. organizers soon got busy with their propaganda and it is now generally conceded that this is nothing more or less than the I. W. W. under another name. In the interests of Canadian labour and Canadian employers, effective steps should be taken to drive out the I. W. W. and the O. B. U. organizations. There should be no room for these agitators who seek to overthrow Canadian law by force.

Gathering of Trade Statistics

The response to the 2,700 forms sent out by the Association last spring was not at all gratifying. It is felt by your Executive that if this information could be sent in to the Secretary without any indication as to where the information originated, it would be most valuable to everyone in the trade. On the return home of members from this Convention they will find a reply postal card asking for this information on these lines, and it is sincerely hoped that not only will all manufacturers fill out these forms but that they will urge others, whether members of this Association or not, to do so. Without the active and earnest co-operation of the trade as a whole, the figures will be of practically no value. Attention is called to the

splendid results that have followed from the publication of the manufacture, orders and shipments of Southern Pine and North Carolina Pine. If we in Canada could look forward to approaching the work now being performed by the Southern Pine and the North Carolina Pine Association it would be felt that we were rendering a distinct benefit to Canadian producers, wholesalers and exporters.

Employment Service of Industry

On September 22nd, 1919, your Association sent out a circular to all members outlining the proposed plan for the improvement of employment methods in the lumbering industry. Briefly, the purpose of the Government Employment Service Bureau is to confine within Government control all employment from coast to coast. Members are requested to express an opinion as to the practical working out of this matter.

We think in the interest of members, attention should be called to a decision rendered by the Court of Review in Montreal about Nov. 20th, covering an f.o.b. shipment. This judgment holds that "free on board" means that the seller, at his expense, places the goods on the car or vessel and that the buyer takes the risk onwards; at the same time the goods must at destination be in conformity with the conditions of sale or they may legally be rejected.

Exhibitions During Coming Year

The Canadian Industrial Exhibition will take place June 3rd to 17th, 1920 at the Royal Agricultural Hall, London England. Any of our members who contemplate exhibiting should communicate with Mr. O. C. Pease, 41 Victoria st., Toronto, Ont.

Another Exhibition, which is described as the British Empire Timber Exhibition, is to be held in London, July 5th to 17th. We were asked for information in this connection and referred the inquirer to Mr. W. B. Stokes of the Forest Products Laboratories, McGill University, Montreal.

"Square" Pack for Coast Shingles

In view of the action of Western Mills in adopting the packing of shingles by "square" instead of by the thousand, the matter is brought to the attention of members for the purpose of discussion.

Lumber Prices—Penny Postage

The publication of alleged prices for lumber and the bare comparison of prices to day with prices which were alleged to be in effect fifteen or twenty years ago, is not in the opinion of your Executive Committee a fair presentation. Usually these comparative prices refer only to the increases which have taken place and do not cover such vital factors as the increase in stumpage, crown dues, wages, supplies, transportation charges, in fact everything that goes into the manufacture of lumber. We feel that the matter is important enough for the consideration of this Association as to whether it is not advisable at this time to go fully into the matter and adopt a general policy for the Association.

Now that Peace has been declared the members here assembled are asked to express an opinion as to whether it would not be in the interests of the country to revert to the pre-war postage rates. Both Great Britain and the United States have already abolished the three cent rate and have put it back to two cents. The stamping of cheques, notes, drafts, etc., is also a matter which might be considered at the same time.

Membership and Trade Journals

It is with considerable gratification that we announce that the membership, which was reported at our last Annual Meeting as 128 has been increased at the time of writing this report to 146. We trust the rate of increase may be maintained during the coming year.

Your Executive has to acknowledge the indebtedness to the following trade journals for publicity and so forth during the year: Canada Lumberman and Woodworker, American Lumberman, Lumbermen's Review and the New York Lumber Trade Journal.

TRANSPORTATION COMMITTEE REPORT

The Transportation Committee reported as follows: In the report of the eleventh annual meeting we drew attention to the fact that the advances in freight rates authorized during the period of the war, that is to say, 15 per cent. with a minimum of 1c per 100 lbs. and subsequently by an additional 25 per cent. with a minimum of 5c per 100 lbs., were still in effect. It is to be particularly noted that the 25 per cent. increase was considered as a war measure. The Board of Railway Commissioners have continued these advances as and from January 1st, 1920, for an indefinite period. Intimation has reached your Executive that a further increase of 20 or 25 per cent.

Frank Hawkins, Ottawa, Ont.,
Secretary of Association since 1908

R. G. Cameron, Ottawa, Ont.,
Honorary Treasurer and Life Director

Wm. Thomas Mason, Montreal,
Chairman of Committee on Resolutions

Hon. J. P. Burchill, So. Nelson, N.B.
One of newest and most active members

is being contemplated by the railways and that application will be made to the Board in the near future.

New Railway Act

At a meeting of the directors held at the Windsor Hotel, Montreal, on May 21st, 1919, it was resolved:

"That, whereas the Consolidated Railway Act having been before Parliament for the last three or four sessions without having been passed, it is expedient in the public interests that this measure should be passed during the present session. The clauses of the Act relating to the right or otherwise of electric or other companies to use the streets of cities, towns or municipalities should not prevent the passage of legislation which is of such vital importance as the conduct of transportation matters in the Dominion.

Be it therefore resolved, that the Secretary of the Association be instructed to send copies of this resolution to the Canadian Manufacturers' Association, the Toronto Board of Trade and the Montreal Board of Trade, asking them to join with this Association in urging upon the Government that the Consolidated Railway Act be passed at this session, and if necessary the contentious clause or clauses which have hitherto prevented passage of the Act be eliminated entirely from the Bill."

This was done and we are glad to say that the suggestion which originated with this Association was carried out and the Act has finally been passed.

Stop-Off

A conference between the shippers and carriers was held in Toronto on May 16th, 1919, and it is quite evident that the railways desire to discontinue the stop-off arrangements. The matter was reported to the meeting of the directors held in Montreal, on Wednesday, May 21st, 1919, and authority was given by them to the executive officers of the Association to oppose most strenuously any restrictions which might be put forward by the railways in connection with the stop-off arrangements. Since that time it has been intimated to your officials that the railways were not satisfied with the continuance of the stop-off arrangements, and we may expect at any time to receive notification that the stop-off arrangements will be cancelled. We suggest that this matter should receive your careful attention and a resolution has been prepared and will be submitted to you later on.

Demurrage

In the Order of the Board of Railway Commissioners for Canada, No. 201, effective August 20th, 1917, the questions of Reciprocal Demurrage and Average Agreements were purposely omitted from being dealt with at that time owing to war conditions. Now that peace has been declared it is urged that the Board should be asked to make a ruling providing for reciprocal demurrage and the adoption of average agreements. It is further urged that the railways should be called upon to provide for the forward movement of all freight from point of origin to destination at a specified distance of not less than 100 miles per day. In this connection we quote again from a circular letter, No. 154, issued by the Board of Railway Commissioners, September 19th, 1917, which read as follows:

"War conditions interfere with car movements. The weather conditions of winter last year increased the conges-

tion and the coming winter may repeat this. Additional freight cars can be obtained only with great difficulty. Prompt deliveries of new rolling stock do not exist.

If each freight car does more work, the difficulty can be faced and overcome. A freight car saved is a freight car gained for extra service. More service per car equals more cars in service. If all shippers load to full capacity or better to 110 per cent. when practicable, car shortage will largely disappear.

Railways by cutting out road delays, and by improved handling in terminals, can make each car do more work.

Prompt and heavy loading of cars gives more service per car. So also does prompt release of cars. Consignors and consignees are interested in getting cars. Their co-operation in efficient car handling will help not only others but themselves as well."

Your committee submit this matter for consideration and discussion but do not deem it advisable to present any resolution.

Increase in Freight Rates

By Supplement No. 13 to C. P. Tariff E 3320 rates from many points into Montreal were increased. Had this Supplement become effective it would have meant also an automatic increase in the export rates. Your officers strenuously objected to this proposal and the result was that effective November 18th, 1919, by Supplement No. 15 to the Tariff, rates into Ottawa only were increased with the exception of the rates from Labelle to Montreal and from Aylmer, P.Q., to Montreal, which the railways explain were increased so as to conform to rates for similar mileage from other points.

WHAT THE SECRETARY HAD TO RELATE

Frank Hawkins, of Ottawa, Secretary of the Association presented a most favorable and comprehensive report as follows:

A year ago we met in the City of St. John, and to-day Quebec is playing the part of host to the Canadian Lumbermen's Association.

The year just closed has been a memorable one in many respects. The tremendous expansion of Canadian business is something remarkable in the annals of national development, but further reference will be made to this matter later on.

The Transportation Committee has reported that the Railway Act, after being before Parliament successively every session since 1913, was passed finally, by eliminating the contentious clauses which had absolutely nothing to do with transportation problems. The credit for originating this idea is entirely due to this Association, although we observe that the Montreal Board of Trade, with customary modesty, assumes that it was through their action.

Labour, Workmen's Compensation, Safety First, are all matters intimately connected with the actual business of lumbering, and form very important subjects for the best consideration members can put upon them. The prolific source of accidents in the bush is the chopping of feet through carelessness. A number of instances of this kind which come to the writer's desk would surprise most of you. The falling of trees and branches, the rolling of logs whereby

men crush their feet are also prolific. Evidently there is plenty of room for propaganda in this direction. It is well understood that Safety First is no longer a fad but a plain dollars and cents proposition in all industries.

If any member is interested in group insurance your Secretary has some information which he will be glad to lay before you in the event of your desiring it.

The Attendance at Past Convention

As a matter of record I would like to lay before you the results of the various Conventions that we have had, with regard to the number of members and friends present.

The list is as follows:

1912....35; 1913....50; 1914....62; 1915.... ; 1916....45; 1917....62; 1918....62; 1919....80.

1915 was the year in which we did not hold a regular Convention. In this connection your Secretary would like to suggest that there should be regular meetings in two or three prominent cities, and that the Directors in those cities should get the local lumbermen and those within easy reach to meet and discuss problems which confront the lumber business from time to time and upon the correct solution of which depends the character of service the Association can render to its members.

Canada's Mercantile Marine

In the estimates of the main session of Parliament last year the sum of forty million dollars was appropriated for the purpose of constructing steel ships, the object being to build up a Canadian Mercantile Marine. Contracts for some fifty ships had already been started and if these ships can be kept out of the shipping combine, and there should be no difficulty about that matter, no doubt they would eventually have an effect in Canadian exporters being able to ship at reasonable rates of ocean freight.

So far as railway legislation is concerned it is interesting to note that all enterprises which are now, or may be, comprised within the Canadian Northern System are declared to be for the general advantage of Canada. Doubt has been expressed to your Secretary as to

the full authority and jurisdiction of the Board of Railway Commissioners over operating and traffic matters in connection with the Government owned railways. But this can only be determined by a stated case when argued before the Board, and has not up to the present time presented any difficulties. It is merely mentioned in this way so that your incoming Committee on Transportation may be empowered to deal with it in the event of trouble arising during the present year.

Your Secretary has a specification for the supplying of pickets both for domestic use and United States export, which he will be pleased to give to any member interested in this business.

THE FINANCES IN HEALTHY STATE

R. G. Cameron, of Ottawa, Honorary Secretary of the Association, presented an excellent report, giving a statement of receipts and expenditures and assets and liabilities. The report showed that the year just closed found the Association in the strongest financial position that it has ever been and that the membership at the time of the presentation of the statement, was 145, as compared with 135 a year ago. There were fifteen new members received during the progress of the convention, making the present figures 160.

Speaking of the efforts to collect statistics of the cut, sales, shipment and stocks of lumber on hand, Mr. Cameron said: With regard to collecting information as to the amount of lumber manufactured in Canada, I wish to draw your particular attention to the fact that the available mailing lists are not very reliable, and in view of the fact that the return post card (samples of which are on the table), requires postage of 4c on each card (or forty dollars a thousand, I would like you to indicate how far the members wish to go in this matter. These cards cover the production for 1919, and the estimate cut of our logs during this winter.

We sent out last spring over 2700 blank forms, and as reported to the directors, the replies were not satisfactory so far as the numbers were concerned. This matter is merely brought to your attention for the purpose of getting your views and action thereon.

SOME THINGS SAW AND DONE AT THE SESSIONS

E. F. Perry of New York, secretary of the National Wholesale Lumber Dealers' Association, was warmly greeted and extended congratulations to the Canadian Lumbermen's Association on the splendid success of their convention. He referred to the unhealthy condition in the rate of exchange at the present time which he trusted would soon be righted. Recent events had caused lumber men to study matters from the serious side rather than the popular and the question now asked is are we on the top wave of prosperity? The great cry is the extreme scarcity of lumber, reduced hours of operation and shortage of labor, which problems demand the most careful consideration. On the other side it was felt that perhaps taxation was at fault and attention was being devoted by the National Association to this topic. There were many other questions in the air which kept the lumbermen guessing. Mr. Perry extended a warm invitation to all Canadians to visit the forthcoming convention of the National Wholesale Lumber Dealers' Association which will be held in Washington, D. C., on March 24 and 25 and concluded by remarking "This is the most representative lot of business men that I have seen at a convention in a long time. You have had a great gathering."

Trade Commissioner on the Outlook

Rhys D. Fairbairn, Commissioner of the Canadian Trade Commission, Ottawa, in speaking on the resolution in regard to increasing the exports of all classes of materials, believed that it was rather too sweeping in character. He pointed out for instance that, if the embargo in respect to sugar was lifted it would mean that within ten days there would not be a pound of sugar to be found in the Dominion. The same observation applied to coal. The federal government had a right to protect the people in certain commodities until the present unfortunate situation was righted. The adverse rate of exchange hit Canadian pride. It was incumbent upon Canadians to buy more goods at home in order to correct matters, and also to increase our exports. We were buying too much of our merchandise abroad. Credit was a matter of international trade and when Great Britain got on a full productive basis and had worked her raw materials into shape, conditions would be set right. Great Britain was just now endeavoring to develop what is known as her key industries. The bigger Canada we make the better market we create for our finished products, declared Mr. Fairbairn who added that eighty per

cent. of our farm products were absorbed in the home market. In connection with our national financing we could not progress without some scheme of taxation whereby everyone would share equitably in the burdens and yet, at the same time, efficiency or the development of trade must not be checked. A credit of fifty million dollars had been granted by Canada to Great Britain for the purchase of our timber. About half this sum had already been expended for forest products and to put the industry on a good basis. He was surprised at the large amount of lumber imported into Canada and thought that it might well be stopped. A large sum, for instance, had been expended in bringing in railway ties which, in his opinion, the Dominion was in a position to supply. As a result of this convention he thought that better relations would be ushered in between Quebec and the other provinces of Canada and it must be remembered that Quebec is going ahead rapidly.

Greetings from an Eastern Member

Hon. J. P. Burchill of South Nelson, N. B., stated that this was his first experience at a Canadian Lumbermen's Convention and so well pleased was he that he was coming again. He thought it was an excellent thing for the representatives of the lumber trade to come together and exchange views and take action on problems confronting the industry. The lumbermen, if confined to their own provinces, were inclined to take a little too narrow a view and meeting with representatives of the different provinces tended to give all broader ideas. In New Brunswick they were chiefly interested in the manufacture of spruce and had confined their attention until late years to the English markets but, during the last three or four years, they had gone into the American markets and found that they had to change their methods and meet the requirements of the people across the line. If the industry had patience and took matters quietly he was not afraid but that all would work out well in the end.

The Civic Welcome at Quebec

In his civic address of welcome H. E. Lavigne, Mayor of Quebec, tendered a hearty welcome to the gathering in the name of the pioneer city of Canada. After referring to its early history and its importance as a concentrating and distributing centre for the lumber and pulp industry as well as the manufactures of articles made of wood, His Worship said:—We heartily congratulate you upon the

David Champoux, Restigouche, P.Q.,
Director of Canadian Lumbermen's Assoc.

J. Fraser Gregory, St. John, N.B.,
Director of Canadian Lumbermen's Assoc.

Sir D. C. Cameron, Winnipeg, Man.,
Director of Canadian Lumbermen's Assoc.

Gordon C. Edwards, Ottawa, Ont.,
Director of Canadian Lumbermen's Assoc.

progress accomplished through your association and upon the stringent measures adopted for the preservation of our forests against disastrous fires, as well as for reforestation so essential for the maintenance and preservation of the valuable source of national wealth. You have our best wishes for the success of your deliberations, and for the efficacy of the measures which you will adopt to promote the industry which you represent. We earnestly hope that you will fully enjoy our hospitality, so that when returning to your homes you will carry a pleasant remembrance of your stay among us and a desire to return to Quebec.

New Minister Makes Favorable Impression

Hon. Honore Mercier, Minister of Lands and Forests for Quebec, said that he was pleased to welcome the visitors to the old city of Quebec. "You have come," he added, "from all parts of Canada to meet and discuss questions of your industry. We are glad to have you and extend our best wishes for your deliberations. In my official capacity this is the first occasion that I have had to meet the representatives of one of the most important industries of our province and, indeed, of the whole of Canada. I have recently taken the place in the Ministry of a man of large experience (Hon. Jules Allard) and you can scarcely expect from me at this early date an enunciation of the administration and policy of my department. As head of the forests branch, I want to follow the course that those, who preceded me in office, adopted with much sense and intelligence in the interest of Quebec and your industry. We have done what we could to protect the natural resources of Quebec and bring about a better feeling between the lumbermen and the settlers, and we believe that we have succeeded as a department in giving an administration satisfactory to both parties and I intend to follow out that plan." Hon. Mr. Mercier then went on to say that he would do all in his power to assist in the progress and development of the great lumber industry and trusted that he would have the help and good will of all. Mr. Mercier was roundly applauded.

Many Problems Confront Producers

Maurice E. Preisch, President of the Haines Lumber Co., North Tonawanda, N. Y., and a former President of the National Hardwood Lumber Association, regretted the absence of Horace F. Taylor of Buffalo, President of the National Wholesale Lumber Dealers' Association, who had intended to be present but was prevented at the last moment owing to illness in his family and among his office staff. He referred to the fact that Gordon C. Edwards, of Ottawa, was a former President of the National Association and while in office had rendered splendid service. Mr. Preisch said that he brought greetings from the National Hardwood Lumber Association and wished the Canadian Lumbermen's Association every success and prosperity. There never was a time when the industry was confronted with as many and great problems as it was to-day whether looking at matters from the standpoint of a manufacturer or a wholesaler. He felt that there would be a lively call for all the lumber manufactured and at good prices. From the producers' point he had no doubts but from the wholesalers' end the situation seemed a little dangerous. He was pleased to learn since his arrival of the favorable attention that was being directed toward production and that the men in the woods were now rendering better service than they had for some years. He observed that Canada in this respect had arrived farther than they had across the line in an effort to create a maximum production

which would help to solve many of the present problems. He felt quite at home in Quebec and bid all Canadians welcome at the convention of the National Association.

The Doyen of the Lumber Trade

John M. Woods, of Boston, former President of the National Wholesale Lumber Dealers' Association, who travelled many miles to visit the convention and was delayed several hours by a wreck on the railway, delivered a racy address in which he told many humorous stories and bright anecdotes. He was proud to greet so many "millionaire lumbermen" and expressed his appreciation of the invitation to say a few words. He had been connected with the lumber business for fifty-four years and was twenty-six when he began, so that they could figure how old he was and in that time had witnessed many evolutions of the industry. He referred to a previous visit to Quebec many years ago when the Canadian Forestry Association first met and asserted his grandmother was a Canadian girl and that "we are all brothers on both sides of the line." He dwelt upon the success that Canadians across the border were meeting with and added that they were all good, sensible, progressive citizens. The world war had made all nations kin and there was enough glory to go around without any country claiming credit for everything. They had all stood for the things that made for the betterment and enlightenment of mankind.

Mr. Woods touched upon the prevailing prices of lumber and said that in a recent sale of mahogany the buyer had said that he would send his motor truck around and was met with the response that a suit case would be sufficient to carry all the stock that was procurable. Another dealer in Boston when asked the price of a certain kind of lumber answered "My dear sir, how much can you stand?" "Uncle John" on taking his seat was thanked for his breezy address by President Power and given hearty applause.

Settlement on British Timber Purchases

W. B. Snowball, of Chatham, N. B., referred to purchases made in Canada for the British Admiralty through the British Timber Buyer and with money loaned by the Canadian Trade Commission to finance the negotiations. He said that an effort had been made to settle with his firm at the depreciated value of British currency. This he refused to accept and had receipted the amount received "on account without prejudice." He thought that adjustment should be made at the full value of the Canadian dollar. He had taken the matter up with Sir Henry Drayton, Minister of Finance, and others and as settlement should be effected in Canadian funds, he had been given assurances of support. Mr. Snowball thought that it was a most important question that all payments on exports should be made at par.

President Power remarked that Mr. Snowball was absolutely right in the stand he had taken and that the Canadian Lumbermen's Association would back him and others up in their contention.

Mr. Manbert Stirred His Hearers

A. C. Manbert of Toronto, Lumber Commissioner of Ontario, who returned some time ago after spending six months in Great Britain in propaganda work, gave a rousing address. He paid a high tribute to the character and stability of the British importer and added that they were a broad-minded people and had grown out of all their insular ideas and suggestions, such as "raising the price of spruce and

seeing how much fifth quality could be put into merchantable and get away with it" (laughter). Insularities were narrow while cultural accomplishment benefited ourselves and the trade generally. Considerable apprehension existed with regard to the future of the lumber industry but it was better to take the average of things in both buying and selling. We were inclined to be more or less opportunists, striving to gauge advantage at the exact moment. In this connection Mr. Manbert related the story of Baron Rothschild in the acquirement of wealth which was that he made money by not buying absolutely at the bottom or by selling at the extreme top.

We should embrace that philosophy which looks at things in the large and study the attitude of our British brethren who are astute business men. Britain would within the next few years regain her influence as a controlling factor in world affairs and occupy a more prominent position than she had even before the war. Lumbermen were here to perpetuate their business over a reasonable period and should carry out things on the average for the permanence and perpetuity of the trade and thus make themselves better citizens and better lumbermen. They should look at matters not exactly on the basis of each yearly turnover but rather in decades. Great Britain was taking a long range view in the matter of rehabilitation and, while there, Mr. Manbert said that he had found some complaint against hard times and the decadence of the nation, but this was in no wise recognized by the lumber industry as an enduring and permanent condition. Great Britain would again become a greater force in affairs than in the past and it behooved them as lumbermen to survey things with the vision of long perspective rather than for the time being and too close up.

The Levying of Income Tax

In passing the resolution with respect to the abolition of the Business Profits Tax, and approving of the continuance and extension of the present income tax, there was a lively discussion which was participated in by Messrs. A. C. Manbert and A. E. Clark of Toronto, A. H. Campbell of Montreal and W. B. Snowball of Chatham, N. B. Mr. Manbert pointed out that income taxation was more equitable in both principle and practice than a business profits tax. In the lumber business they dealt with large figures in volume but with a relatively small percentage of profit. The matter was, therefore, a vital one for them to consider since the levying of a tax based on the volume of business would penalize such industries as lumbering and bestow unfair privileges on other lines of manufacture that have a smaller turnover and a larger margin of profit. Taxes should be extended to all earnings and all increments and should not be levied in such a way as to discourage the exploitation and development of our natural resources.

A. E. Clark spoke along similar lines and said that lumbermen did not object to a reasonable levy but they did not want to see the business profits tax brought again into operation.

President Power also stated that he was in favor of some more equitable system and regarded the matter as highly important.

Banking Act and Statistical Returns

Mr. Clark referred to clause 88 of the Banking Act in which, in the case of an assignment, the banks took all the assets of the party assigning and the lumbermen all the troubles. He felt that such a clause had worked a hardship on the wholesale lumbermen and thought that suggestions should be forthcoming regarding what could be done to get rid of the present unjust regulation. Owing to the increasing difficulty of carrying on business by reason of additional capital required, no mutual arrangement had been arrived at between the lumbermen and the banks in regard to this section of the Act.

Mr. Angus McLean stated that this matter has been brought up at a meeting of the lumbermen in Montreal several months ago and it was then felt by some that it would be unwise at the present time to disturb the existing relations between the banks and borrowers.

Some discussion arose over trade returns and the advisability of the federal government furnishing detailed statistics with respect to the export trade in lumber with different countries as compared with home consumption. The time has come for this information to be provided, how much was going to the English market, the United States, etc. Messrs. Campbell, McLean, Snowball, Power and McLachlin took part in the debate. Mr. Campbell suggested that the Statistical Department at Ottawa send out a simpler form of questionnaire as it was almost impossible to answer a number of the present queries.

The Inspection of Hardwood Lumber

A letter was read from Charles A. Goodman, Marinette, Wis., President of the National Hardwood Lumber Association, regretting his inability to be present and adding that they were proud of the fine list of members from Canada. Our members, he continued,

on this side of the line want our Canadian members to feel that their interests are just as important as our own and that we are all in one organization making an earnest effort to handle inspection of hardwood lumber in an efficient manner for the best interest of all the trade. In this connection we want to hear from our Canadian friends frequently and with any suggestions that they wish to offer as to the method of handling our work which will improve the inspection service or the usefulness of the organization.

G. C. Piche, chief of the forest service, Quebec, wrote in regard to the giving of a certain amount to defray the travelling expenses of Laval Forest School in order to allow students to spend about a year in Europe to complete their training. He asked that the matter be discussed and said that the actual condition of our forests and the increased demand for timber will require the employment of well qualified foresters to prepare working plans of our limits; therefore, it would be of benefit to the lumbermen and of the province if, at least, two young foresters would be sent abroad every year to study European methods. No action was taken on the communication.

Conference on the Labor Question

During the convention a conference of lumber manufacturers was held to discuss the question of labor and working hours. No definite action was taken and it was resolved that the producers in each district should attend to local matters as they arise. In some sections of New Brunswick nine hours have been granted but in Quebec city district the working hours are ten a day. One leading lumberman declared that he had granted his men a nine hour day as they had promised to do fully as much work in that time as they formerly carried out in ten. He had found, however, that nine-hour production was by no means equal to the ten hour day and, in some cases, the efficiency of the employees had fallen off sixteen per cent.

It Will Be Ottawa, in 1921

On motion of A. H. Campbell and seconded by W. B. Maclean, it was decided to hold the next annual C.L.A. convention in Ottawa. The resolution was warmly supported by Walter M. Ross, of Ottawa, and carried unanimously.

President Power made an admirable presiding officer and kept everything moving with precision and efficiency, while Secretary Hawkins carried out his numerous duties with a smile that cannot be effaced.

Roland D. Craig of the Commission of Conservation, Ottawa, which is conducting a timber survey of Ontario, told of how the work had been carried out in British Columbia and of the progress that was being made in Ontario. He thanked the lumbermen of the province for their active aid.

The Committee on Resolution was composed of W. T. Mason, George W. Grier and A. E. Clark. They had a good deal of work to perform which they attended to cheerfully and willingly.

The trip on the ice breaker to see the great Quebec bridge, which was scheduled to take place on Friday morning, had to be cancelled owing to the severe storm which prevailed.

On the second day of the convention an interesting and instructive address illustrated by lantern views was given by R. J. Blair, pathologist, of the Forest Products Laboratories, Montreal. His subject was "The Lumber Trade Loses Valuable Customers; Who is to blame?" A complete report of the remarks of Mr. Blair will appear in a later edition of the "Canada Lumberman."

Hugh McLean of the Hugh McLean Lumber Co. of Buffalo, was one of the interested visitors at the convention and delivered a short address expressing his pleasure at being present and meeting so many old friends. Spencer Kellogg, of Utica, N. Y., also said a few kind words.

R. H. Campbell of Ottawa, Director of Forestry, submitted a detailed report on the white pine blister, copies of which will be sent to all the members of the C. L. A. by Secretary Hawkins.

President Power thanked the "Canada Lumberman" and its publishers for the splendid publicity plans conducted in booming the 1920 convention and said the Association appreciated the good work very highly.

A letter was read from the New York Lumber Trade Association stating they had established a Bureau of Information. The function of this bureau was to study costs, sources of supply, market conditions, standard specifications and means of educating manufacturers to use species of wood and sizes of lumber which may be employed most economically in their business. The Bureau would be pleased to assist Canadians in any way.

Mr. Poliwka Wants Price Stabilization

H. B. Poliwka, one of the retiring directors of the Canadian Lumbermen's Association, who has been confined to the Jeffery Hale

Hospital in Quebec for some time, sent a letter to the convention as follows:

Perhaps you will allow me as a member of this Association to touch very briefly on what I think you will agree is a most important aspect of present-day conditions, not only to the lumber trade, but in all departments of commerce. I refer to the desirability of calling a halt in the continued upward movement of prices. We have all seen during the past two years how the marked increase in money in circulation has lowered the value of the dollar; how steadily advancing prices in commodities have brought about the present high cost of living, resulting as a natural consequence in unrest and discontentment, in practically all fields of labor. We little realize that every initial advance in the cost of material is not only adding to the problems we are bequeathing to the future, but what is more of immediate concern is adding fuel to the fires of labor unrest, which are now burning with a decidedly red flare. Of course,

it must be admitted no action on the part of this Association could solve or even seriously improve present conditions, but it might prove of ultimate benefit if this Association could adopt a resolution urging the membership to make an honest effort to prevent prices from advancing still higher; such a lead would no doubt be taken up by other trade organizations and would work out for the ultimate benefit of the lumber industry as well as improving trade conditions generally. In this connection most of you have no doubt read in the press that United States Steel Corporation, while unable to handle all the business offering, has decided not to increase prices beyond the present level, although the law of supply and demand would justify doing so. Of course, from these few remarks you will conclude the writer's viewpoint is quite disinterested and, nevertheless the question at the present time is worthy of our serious consideration. Well, gentlemen, in conclusion, allow me to wish you all a most enjoyable and profitable visit to Quebec.

NEWSY BRIEFS OF THE LIVE ANNUAL ASSEMBLY

Harry Fugere of St. Pacome, Que., and Lloyd Moore of Toronto, were appointed scrutineers in connection with the election of directors, and were accorded a hearty vote of thanks for their services.

The five lady telephone operators at the Chateau Frontenac were voted a gift of five dollars each from the funds of the C. L. A. in appreciation of faithful work done during the convention for the members.

A very enjoyable dinner was tendered the visitors on February 4th in the Empire Room of the Chateau Frontenac. The guests thoroughly enjoyed the repast, which was provided through the generosity of the lumbermen of Quebec City. Sir Wm. Price, Chairman of the Local Reception Committee, presided. There was no speech-making except a few words from Sir William, who cordially welcomed the guests to the Ancient Capital. It had been said on certain occasions that Quebec was the slowest city on the continent, but Sir William believed that the lumbermen could show the members of the Canadian Lumbermen's Association that they still "had some pep and go left," and thought they had put some of these qualities into the work in hand. He hoped the visitors would all have a pleasant time, and the representative character of the gathering was most gratifying. He again extended hearty greetings on behalf of the Local Committee.

The ladies, who took in the trip, were exceptionally well looked after, and although they did not attend the business sessions of the convention, there was not a dull moment of the fair sex. Last year, owing to the great distance that had to be travelled in order to reach St. John, there were no delegates accompanied by their wives. This year, however, it was different, and arrangements were made for making their stay as delightful as possible. Mrs. R. M. Beckett was convener of the Ladies' Committee, and in her work was ably assisted by the wives of the lumbermen members of the Quebec Reception Committee. On the afternoon of February 4th there was a tea at Lady Price's at 145 Grand Allee. There was also sliding on the splendid toboggan slide on the terrace in front of the Chateau, and in the evening a number of ladies attended the hockey match, after which there was an informal dance and bridge at the Chateau.

Single sleighs were on hand for the convenience of those ladies who wished to visit the stores and any particular place of interest. On Friday numbers of the fair sex were taken by special cars to the famous shrine of Ste. Anne de Beaupre and returned to Montmorency Falls at noon, where luncheon was served. In the afternoon the convention proceedings being over, a large number of gentlemen journeyed to the historic Kent House at Montmorency Falls. This quaint frame structure was occupied by his Royal Highness the Duke of Kent, father of the late Queen Victoria, in 1791, and is linked up with the annals and associations of the past century. The spacious dance hall afforded every opportunity for the indulgence in this pleasant pastime, while the toboggan slide in front of the hotel was well patronized. During the afternoon short addresses were delivered by Dan. McLachlin of Annapolis, the new president of the Association, E. A. Dunlop, ex M.P.P. of Pembroke, W. Gerard Power, the retiring President, Mrs. W. E. Bigwood of Toronto and others.

Many of the lumbermen delegates were present at the Arena rink on Wednesday night and saw a spirited game of hockey between the Senators of Ottawa and Quebec City in the N.H.L. series. The team from Ottawa was successful by a score of 5 to 0.

John M. Woods of Boston, former president of the National Wholesale Lumber Dealers' Association, whose witty stories and bright remarks captured the convention, is known all over the United States as "Uncle John." He is eighty years old, but carries his age with such a jaunty air that he was among the liveliest delegates at

the great convention. "Uncle John" is always a welcome visitor at every lumbermen's gathering.

Among the new firms who joined the Canadian Lumbermen's Association during the session in Quebec, and were received into full membership, were the following:

J. E. Harroun & Son, Watertown, N.Y.
Geo. Burchill & Son, South Nelson, N. B.
J. W. Maloney, Newcastle, N. B.
Plunkett-Webster Lumber Co., New York.
W. H. Mitchell, Lyster, Que.
St. Lawrence Pulp & Lumber Corp., Chandler, Que.
Cedar Products Ltd., Amherst, N. S.
Eastern Canada Sawmills Ltd., Montreal.
Chas. T. White & Sons, Sussex, N. B.
J. Duford, St. Moise (Matane) Que.
Blair & Rolland Ltd., Montreal.
Geo. Webster & Son, Ltd., Swanton, Vt.
Eagle Lumber Co., Montreal.
St. Lawrence Lumber Co., Quebec.
Garrettson & Ellis Lumber Co., Springfield, Mass.

New Position for A. W. Barnhill

Mr. Alex. W. Barnhill, of Montreal, recently associated with the Service Lumber Co., of Vancouver, has been appointed salesman for Mason, Gordon & Co., Montreal, in succession to Mr. H. A. Rose, who has gone into business on his own account.

Mr. Barnhill has had a long experience in the lumber and timber trade in both the Eastern provinces and British Columbia, and knows the trade from the stump to the planing mill.

He started with Mason, Gordon & Co., on February 2nd, and will call on the firm's customers at as early a date as possible. In the meantime, as the Toronto office of the firm has been closed, all inquiries should be mailed to the head office, 80 St. Francois Xavier street, Montreal, where they will receive careful and prompt attention.

The Varied Needs of Northern Ontario

At the recent convention held at North Bay in the interest of the development of New Ontario a number of important resolutions were passed in favor of the French river canalization scheme, good roads, more conclusive colonization, various extensions of the T. and N. O. railway and reforestation.

A. J. Young, of North Bay, who is a well-known lumberman, declared that the development of the extensive water powers of the north was a pressing need, by private interests, if the "Hydro Electric Commission and the Provincial Government do not have sufficient faith in the future of the country."

Will Manufacture Line of Sectional Houses

The Harris Wood Products Ltd., Toronto, Ont., who were recently incorporated with a capital of \$100,000, have secured the Graydon Mill plant at Streetsville, Ont., and are fitting it up to manufacture a line of sectional houses for domestic and export trade. The site consists of 6½ acres, and when the improvements to the plant are completed, they will have about 9,000 feet of floor space. The following equipment is being added: Cowan 12" moulder, Cowan power feed rip saw, Jackson-Cochrane buzz planer, Cowan swing cut-off, Cowan drum sander, two Morgan nailing machines, sash relisher, tenoning machine. Business for houses already secured include a \$50,000 export order and one order amounting to \$25,000 for domestic trade.

Lumbermen's Banquet Was Brilliant Event

Convention Terminated With Pleasing Social Function and Eloquent Addresses by Sir Charles Fitzpatrick and Hon. Messrs. Taschereau and Mercier

The annual banquet of the Canadian Lumbermen's Association which was held on Thursday night February 5th, at the Chateau Frontenac, Quebec, was one of the most brilliant and successful gatherings of a social nature that has ever taken place in the Ancient Capital. The main dining room was taxed to capacity and the assembly was graced by the presence of many ladies. There were about four hundred guests in attendance and the decorations were suggestive of the memorable occasion. There were leading trees of nearly all the forest resources of Quebec adorning every nook and corner of the spacious apartment while perched among the branches were specimens of various wild animals of the woods not overlooking the black bear. Forming an appropriate background at the head table were several lumbering utensils such as the axe, the cant hook, the pike pole and the peevie. The settings were admirably arranged and in good taste and were carried out under the direction of the local Quebec reception committee and the management of the Chateau Frontenac. President W. Gerard Power ably presided and the menu was a recherche one that tempted all.

The only regret of the large company was the absence of Sir Lomer Gouin, Premier of Quebec, who having contracted a severe cold was unable to be present but his place on the toast list was ably taken by Hon. Alexandre Taschereau, Attorney General of the Province and Hon. Honore Mercier, Minister of Lands and Forests, both of whom were listened to with pleasure and interest.

The chief speaker of the evening was Sir Charles Fitzpatrick, Lieut.-Governor of the Province of Quebec, who delivered a strong and patriotic oration on "Canada" which aroused his hearers to a high pitch of enthusiasm. The first toast honored was "The King" and during the evening splendidly rendered solos were given by George J. Staton, of Quebec, who is always a valued vocal contributor at any function in which lumbermen participate, while a quartette consisting of Mr. Thorne and three of his sons, of Quebec, added not a little to the enjoyment of the evening. La Marseillaise was heartily joined in by all present. Song sheets were distributed and the banquet hall resounded ever and anon to popular melodies.

At the head table were W. Gerard Power, who as chairman left nothing undone, Sir Charles Fitzpatrick, Hon. Alex. Taschereau, Hon. Honore Mercier, Hon. Walter Mitchell, Maurice Preisch, (Buffalo, N. Y.), R. D. Fairbairn, Sir R. E. W. Turner, Sir David Watson, Brig. Gen. J. B. White, John Theo. Ross, Hon. Frank Carrel, Sir William Price, Victor Pelletier, Hon. J. P. Burchill, G. C. Piche, (Chief of the Forest Service, Quebec), John M. Woods, (Boston), W. B. Snowball, Garfield White and others.

Mr. Power Opens Proceedings

The chairman Mr. Power, in his opening remarks said:—

I am sure you will agree that I am expressing your thoughts and sentiments; when I say to the Quebec Committee that we are profoundly touched, and deeply grateful to them, for the hospitality which has been extended to us during the past few days.

We have come together this evening in a city which, from a historical standpoint, is probably the most celebrated on our hemisphere. Quebec has been well, and truly, called the cradle of the Dominion. It was here that those sturdy explorers, Jacques Cartier, and Champlain first planted the cross, and brought to a continent the blessings of Christianity and civilization. It was from here, in later days that the pioneers of the new world set forth to discover the boundless prairies of the West, the wealthy Northern country, and that magnificently fruitful valley of the great Mississippi. The whole city, the whole district within which we are, fairly oozes with the breath of romance, and bristles with points of historical interest. There is here also a particular interest for us of the lumber trade; for Quebec has played a prominent, even a predominant part in the industry to which we devote our energies. It was from here, in 1667, that the first cargo of lumber to leave this country was shipped to France, to be used in the construction of ships for the Royal Navy. Later on the British found in Canada a generous supply of timber suitable for masts, and it was to this city that the Admiralty sent its ships to obtain these necessary articles, which in the early days of the nineteenth century, Napoleon's continental blockade had rendered it impossible to secure in the Baltic. The trade once established for the purpose of war, thrived and prospered in the piping times of peace. The spruce from the St. Lawrence

Valley, the pine from the Ottawa, and Michigan; even the oak from the Ohio, Kentucky, and Virginian Mountains; all were brought to Quebec, to be butted, dressed, and forwarded to the European market. Here at different periods came the Cavalier Seigniors of New France; the haughty Admiralty officials of old England; the red Indian raftsmen; the French-Canadian lumber-jacks; the dour psalm singing, hard fighting men from Glengarry; and finally, nearer to our own time, those mighty timber barons, overlords of the Ottawa and the Gatineau. Quebec became the timber port of the Dominion, the trade grew by leaps and bounds till, in the sixties of the last century, as many as 1350 square rigged ships entered the port, to load with timber for export; and as many as five to six thousand laborers obtained their living from this industry alone.

More modern means of communication, the diversion of a portion of the business from Europe to the United States, the phenomenal growth of the port of Montreal, and other reasons have brought about a decline in the volume of business. The timber coves are now

Chateau Frontenac, Quebec, Headquarters of the Representative Gathering of Canadian Lumbermen

deserted; the grass grows on the wharves and piers, where hundreds of ships formerly had their moorings, but the spirit of the trade still remains, and the old time Quebec lumbermen, or his descendant, though he may establish himself elsewhere, never forgets that it was here that his business had its inception. Though he may be forced to go further, and further afield for the products of the forests, he endeavors to carry throughout the Dominion the same principles of justice, fair-play and sound business ethics which I am proud to say are still characteristic of our trade.

We are particularly fortunate to-night, and are honored by the presence amongst us of one who has risen through his own effort by dint of perseverance, industry and native ability to the highest post in the land. From his own experience, and through his family connections he is eminently fitted to address us with reference to the Trade in this City and District, and throughout the Dominion. Our distinguished guest was born under the shadow of Cape Diamond, the son of a prominent lumberman of the day, at a time when the trade was at the zenith of its glory. Though personally he has taken no part in the exploitation, or exportation of the products of the forest, he has, as a great many of are aware, on numerous occasions rendered inestimable services in guiding and directing our foot-steps around the legal pit-falls which we so frequently encounter.

He has been a Minister of the Crown, Solicitor-General, Minister of Justice, Chief Justice of the Supreme Court, Administrator of Canada, and is now the representative of His Majesty the King in the Province of Quebec. I have great pleasure in introducing to you the Right Honorable Sir Charles Fitzpatrick, Lieutenant-Governor of the Province of Quebec.

Sir Charles was cordially welcomed and stated that the subject "Canada" with which he had to deal was a large one extending as it

does from the Atlantic to the Pacific and containing within its borders more than half of the North American Continent. The beginning of the settlement of Canada was in Quebec, and, as the Chairman properly remarked, has been long associated with the history of the industrial development of the Dominion. It was the home of the timber trade. Quebec was the gateway of the heart of this Continent. Quebec was the scene of the last conflict between the French and the English, and descendants of these races have settled in the New World. The result of the battles between Levis and Murray depended upon the first flag that came up these waters and the first flag was a British one. Have you ever remarked that the people of Quebec are civil, polite and law-abiding? You will agree with me that outside of Paradise there are few better places than Quebec. (Laughter and applause). In 1759 there were 62,000 French-Canadians, and at the present time there are more than 2,000,000 of that race in Canada and 1,000,000 more in the United States. They have increased and prospered. As an example of the energy of the people of this Province, I would refer you to the year 1916, when the value of agricultural products amounted to \$102,937,000, and in 1919 to \$307,994,000. In 1914 there were 4,683,000 arpents in cultivation, in 1918 this had increased to 13,293,000 arpents. In addition to the increase in agricultural products, we should remember that the French-Canadians gave to the Great War the 22nd Battalion. In Quebec we were neither Russian Bolsheviks nor German Militarists. French-Canadians love their country and are devoted to their religion, which is guaranteed to them by the British, and the British keep their covenants. They were an industrial people, and would take advantage of the opportunities that presented themselves. Mechanism had played an important part in the industrial life of this Dominion and Province, but in future electricity would be the big factor in industrialism. In Quebec there were ample opportunities of developing electricity and the Quebec Government was doing its best to develop its resources in every way and had undertaken to spend \$5,000,000 to promote colonization. Many millions of dollars had been spent by the lumbermen in the Province, which benefited the colonists, and the latter in turn, by their energy and industry, had done their share in the progress of Quebec.

Lumbermen and the Cause of Education

Hon. Alex. Taschereau, Attorney-General of Quebec, followed in a most acceptable address which was brightened by not a few humorous references. He spoke of the immense wealth of the Province and the co-operative spirit to develop its great natural resources. He dwelt particularly upon the work of education, the splendid strides made in this direction and the excellent institutions of instruction in the Province. Mr. Taschereau added:—

To further education, however, we must have means, and I am sure that lumbermen will not be averse to the Government asking them to do a little better in this respect than they have done in the past. The lumbermen know better than anyone else that our forests are getting scarcer every day. In our own District, for instance in the St. Maurice region the forests are not to-day what they were fifteen years ago. Our lumbermen are asked to respect to the fullest extent the Government regulations, so that we can in years to come have as many lumbermen as we have today. So far as the Legislation of the Province of Quebec is concerned, I think that the Government has given the lumbermen every facility possible in the pursuit of their business. I believe that the lumbermen will admit that the Government has been always well disposed to them. At present the Government was introducing a Bill to meet the troubles which have lately arisen in regard to the floating of logs. When competing firms operate on the same river trouble will arise, and the Public Utilities Commission will determine the pass of the drive so that the troubles which have arisen in the past, will not arise in the future. In the House of Assembly this afternoon they were discussing the question of admitting women to the Quebec Bar, and I am sorry that the ladies were not present on the occasion. I feel sure that if the ladies were admitted to the Bar that the lumbermen would not be so afraid of the legal profession as they are to-day.

Quebec and the Lumber Industry

Hon. Honore Mercier, Minister of Lands and Forests, was the concluding speaker and reviewed the work of his department while at the same time he took a broad and optimistic outlook of the future. Touching upon lumber he said that it had always meant much to Quebec and the forests still remain one of the chief assets of the province.

Our resources are great. We have 45,000,000 acres of timber lands under license and approximately 75,000,000 of virgin timber lands. We do not however know the value of these forests and we should like in order to build up a definite forest policy to make a complete survey of all forest lands. For this we shall need the assistance of limit holders so far as the survey of their limits is

concerned; and the task of the Government in surveying the remaining territory will still be a vast one. In a word the time has come for us to require the preparation of working plans in lumbering operations. You will admit that it is in the public interest and in your own as well to plan your operations ahead, so as to leave the forest,—after cutting it,—in the best possible condition for future growth. The objection which may have one time existed to such a policy has disappeared. With our well organized fire protection system, due largely to your co-operation the danger of fire has been greatly reduced and therefore you can afford not to cut the forest too close in order that it may be in a position to be cut over again in a reasonable time.

For the same reason private owners of waste lands may safely commence their reforestation.

The Government intends to deal with lumber limits in a generous manner but expects the limit holders to do their share too. The lumber industry in the past has done wonderful things to increase the efficiency of mill operations and to reduce waste in the utilization of wood products. There is still more to be done in this respect, notably in the use of hard woods which have been practically untouched by present operations. I think we may rely upon lumbermen to devise proper and adequate methods of transporting these logs from the forest to the mill.

The future of the lumber industry as well as that of pulp is certainly brilliant. For many years to come there will be a large demand in Europe for material with which to rebuild the regions devastated by war and also to replace the supply of timber formerly furnished by the forests which have been destroyed during the last five years in every section of Europe. The gradual exhaustion of wood supply in the United States will also increase our opportunities of becoming furnishers of paper products to our neighbors as well as to Europe. Our province is in every way well situated to take advantage of these opportunities. We have the necessary natural elements in our water falls and in our forests, and in addition, we have one of the greatest factors of prosperity in a population which is recognized as one of the best in the world, as well as having a class of lumbermen who are appreciated wherever known for their progressiveness and broadmindedness.

The gathering terminated with the singing of "Oh Canada" "My Country 'Tis of Thee" in honor of several American visitors and "Auld Lang Syne."

Stocks Get Lower and Demand Grows

Mr. Hugh A. Rose of Rose-McLaurin, Limited, returned to Toronto recently after an extended business trip to the leading mills in British Columbia. He reports that stocks in the West are very low and that the demand is far greater than the supply. This applies to all kinds of Forest Products and values are constantly on the increase owing to the unusually large requisitions from across the border as well as Australia, South Africa, South America and the Orient. How long the present abnormal state of the market will continue it is impossible to say. The situation is one governed entirely by supply and demand, and prices naturally ascend in sympathy with the insistent call for wood goods of every description.

Mr. Rose found that a number of the big manufacturers were anxious to retain their connection in the Eastern Provinces, and were quite willing to dispose of whatever stock they had in hand to customers in the East at the same figure as could be obtained at any other Canadian point. In a few instances certain producers were even willing to forego the advantage of American exchange in order to take care, as far as possible, of their Eastern connections. There is a great scarcity of shingles and prices are advancing steadily on the limited supply.

When lumber production will catch with the demand no one knows. The prospects in the West are very bright for an especially active building boom. Mr. Rose was successful in obtaining a few carloads for the Eastern customers of his firm who have been appointed selling agents in Ontario and the Maritime Provinces for Thurston-Flavelle, Limited, of Port Moody, who are specialists in B. C. cedar. Rose-McLaurin, Limited, will also handle the widely-known line of doors made by the Wheeler-Osgood Company of Tacoma, Wash., throughout Eastern Canada.

The majority of the mills are sold in excess of their visible supply of logs, and while there is a price list on logs it is like the price list on lumber—used simply to base premiums on. Loggers will not sell logs until they reach Vancouver, when they are then disposed of to the highest bidder. The production of logs is far short of the consuming capacity of the mills now operating, and word received by Mr. Rose since returning makes it appear as if some plants may have to shut down owing to their inability to secure logs.

New Presiding Officer of Association

Dan McLachlin of Arnprior, Ont., Comes of Family Long
Associated With the Lumber Industry

Dan McLachlin, Arnprior, Ont.,
President of C.L.A. for coming year

Dan McLachlin, of Arnprior, Ont., the new president of the Canadian Lumbermen's Association, comes of a historic family that has been associated for generations with the lumber and timber business in the Ottawa Valley. "Dan," as he is familiarly known, is the eldest son of Hugh F. McLachlin, of Arnprior, and a grandson of Dan McLachlin. The latter was engaged in the square timber trade from 1835, and was one of the prominent figures in those pioneer days when hewn products played such a leading part in the development of the country. In 1865 a sawmill was built at Arnprior and has been in continuous operation ever since in the hands of the McLachlin family, the present head of the Canadian Lumbermen's Association representing the third generation.

The founder of the business passed away in 1872, and his sons Hugh F. and Claude, then formed the firm of McLachlin Bros., and managed affairs with energy and aggressiveness. Claude McLachlin died in 1904, and two years later a joint stock company was formed under the name of McLachlin Bros., Limited. The other brother, Hugh F., (the father of Dan McLachlin, who is now the directing genius of the business), joined the silent majority in 1912.

Dan McLachlin is an Arnprior boy, born and bred. He was educated in the schools of his native town and at Asbury College, and McGill University, Montréal. He is only thirty-nine years of age and has held responsible positions, being for eight years a member of the town council of Arnprior, six of which he ably filled the Mayor's chair. He is also Vice-president of the Canadian Forestry Association, and the retiring president of the Quebec Limit Holders' Association, which post he occupied for two years. He has also been Vice-president for several years of the Canadian Lumbermen's Association, and has always taken deep interest in the work and worth of the organization.

As a youth, Mr. McLachlin spent three years in woods operations and is familiar with all branches of the manufacture of forest products. The normal capacity of the McLachlin mill at Arnprior is 55,000,000 feet a year, or about 412,000 feet daily. It is equipped with four single cut band saws (two Stearns, one Hamilton and one Waterous). The plant is now being improved by the addition of new edgers, trimmers, a Waterous band resaw and other installations. There is a lath and picket department consisting of seven picket machines and three lath machines. The timber cut is principally white pine, red pine and spruce. The company are this season conducting eleven camps and employing about 900 men in bush operations. Three of the camps are located on the Petawawa River, four on the Black River and four on the Kipawa. Last winter they operated seven camps and expect that their cut this year will be greatly increased. McLachlin Bros. have fourteen hundred square miles of timber limits in the Province of Quebec, and two hundred and twenty square miles in Ontario. Their mill is located at the junction of the Ottawa and Madawaska rivers.

The new President of the Canadian Lumbermen's Association has several brothers, but all are engaged in other lines than lumbering. Dan McLachlin has surrounded himself in his busy activities by a trained and efficient staff and is well liked and well spoken of by all his confreres in the lumber arena. He succeeds W. Gerard Power, of St. Pacome, Que., as head of the C. L. A., and, under his progressive direction, the Association should continue to prosper and expand. The thirteenth annual convention will be held in 1921 at Ottawa.

New Officers of Western Association

At the annual meeting of the Western Retail Lumbermen's Association which was held in Winnipeg on January 28, 29 and 30, there was an attendance of over 300 representatives. It was the twenty-ninth annual assembly of the dealers of the prairie provinces and was the most successful ever held. Walter Thorn of the Imper-

ial Lumber Co., Moose Jaw, President of the Association, ably presided at the sessions.

The following officers were elected for 1920:

Theo. A. Sparks, of the Northern Lumber Co. Ltd., Winnipeg, president.

R. Skov, High River, vice-president.

Directors: Manitoba, E. E. Finch (Strathclair); W. P. Dutton, J. A. Ramch (Winnipeg); Saskatchewan, F. F. Gardner (Moose Jaw); A. S. Peterson (Birch Hills); P. Kleckner (Vibank); Alberta, F. E. Sine, (Calgary); H. B. Armitage (Camrose); F. Stoltz, (Lethbridge).

Loggers and Lumbermen Elect Officers

At the annual meeting of the B. C. Loggers' Association held recently the following officers were elected for the coming year:

President—Mr. P. A. Wilson of the Wilson and Brady Logging Company.

Vice-president—Mr. M. D. Rector, of the International Logging Company.

Directors—Messrs. F. C. Riley, of Bloedel, Stewart and Welch; J. M. Dempsey, of the Dempsey Logging Company; N. S. Loughheed, of the Prince Rupert Spruce Company; F. R. Pendleton, Goodwin G. Johnson, of the Capilano Timber Co.; George Moore of Merrill, Ring and Moore; L. H. Webster, E. G. English, T. A. Lamb and A. E. Munn, of the Northern Pacific Logging Company.

Secretary—W. B. W. Armstrong.

The B. C. Lumber & Shingle Manufacturers Association have elected their officers for 1920 as follows:

President—E. C. Knight, Vancouver Lumber Company.

Vice-presidents—J. D. McCormack and F. R. Pendleton.

Directors—G. R. Hackett, L. A. Lewis, P. D. Roe, Aird Flavelle, A. J. Hendry and E. J. Palmer.

Secretary—R. H. H. Alexander.

B. C. Forests Produced 62 Millions

The total value of forest production in British Columbia for the year 1919 will not be less than \$62,000,000, against \$54,000,000 in 1918, according to a preliminary survey given. Waterborne shipments of lumber show an advance over the preceding year of 17,000,000 feet, while the value of pulp and paper sold increased from \$15,517,250 in 1918 to \$15,554,257 last year.

Big Purchase of White Pine Logs

The Midland Argus says: Messrs. G. Mason & Co., Ltd., of Manchester, England, have purchased through their Canadian representative, Mr. G. L. Main, of Galt, some 25,000,000 feet of white pine logs from Manley Chew of Midland. We understand the bulk of these logs will be cut at the Chew mills in Midland under the personal supervision of Mr. Main, and the product when dry exported to Manchester. While no price has been made public, we understand the figure paid is over the million dollar mark.

Are you trying to get the lion's share of the business that develops in your territory, Mr. Dealer, or are you working intelligently to increase the business of that territory, so that there will be more to divide?

Influence of the Trade Journal

The following letter from the Public Library of New South Wales, Australia, is further evidence of the great value of trade publications in disseminating information regarding the manufactures and resources of Canada:

Sydney, 17th November, 1919.

Publishers Canada Lumberman,
347 Adelaide St., West, Toronto.

Dear Sirs:

We have in this Library a particularly fine collection of trade publications, including most of the important trade journals published in England and America. Many of these are forwarded regularly as donations from publishers and directors of trade corporations, who recognize that there is no better way of advertising the manufactures and resources of a country than by providing a complete and up-to-date file of trade and commercial literature in the leading libraries throughout the world.

W. A. Ifould,

Principal Librarian.

Pointed Paragraphs of Timely Interest

Sir George Perley, Canadian High Commissioner and well-known lumberman of Ottawa, has resigned from the directorate of the Bank of Nova Scotia.

An extra provincial license has been taken out by the Alfred McDonald Lumber Co., Ltd., Peterboro, Ont., who have a federal charter to carry out and do business in Ontario, and to expend the sum of \$200,000 in such operations.

The firm of Terry & Gordon, wholesale lumber dealers, Toronto, has become incorporated as a limited company, under the name of Terry & Gordon, Ltd. The new company has been granted a Dominion charter with capital stock of \$750,000.

It is understood that there is a movement on foot to stabilize wages for the building trades all over the province of Ontario and pending the outcome of this it is not likely that anything will be done with the new demands presented by the building trades to Ottawa builders and contractors.

National Building Co., Ltd., with headquarters in Toronto and a capital stock of \$125,000, has been incorporated. Wide powers are conferred upon the company and among them are to erect and build houses, stores, factories, warehouses, etc. Among the incorporators of the company are Alex. B. Crooks, Arthur W. Roebuck and others.

Fire recently destroyed the factory of the Hope Manufacturing Co., Limited, 456 Gilbert Ave., Toronto. Damage was done to the plant to the extent of \$45,000 and the loss is only partially covered by insurance. The company manufacture sash and doors and have been in business since 1912. Some twenty-five men are thrown out of employment.

J. E. Asam has recently removed his plant from Rydal Bank to Thessalon, Ont. He has put up a two-storey factory 40 x 60, installing the necessary equipment for the manufacture of the Asam patent blueberry basket and also supplying material for bottoms of baskets made by other companies. Mr. Asam has a Waterous saw-mill and may branch out soon in making something along the line of broom and brush handles in the rough.

William Robertson, B. C. Lumber Commissioner, who has had offices in the Kent Building, Toronto, is removing to 1 Adelaide St. East, where he will have larger and more commodious quarters on the ground floor. The interior is now being finished with specimens of Coast and Mountain woods in an attractive manner and the permanent showing of forest products will prove of much interest and instruction to all callers at Mr. Robertson's office.

A charter has been granted to the Trent Paper Co., Ltd., with a capital stock of \$1,000,000 and head offices in Toronto, to engage in and conduct a general business in wood, pulp and paper, and to manufacture and deal in timber and lumber and to do general manufacturing and merchandising. Among the incorporators of the company are Stanley Dodd Pearce, contractor, of New York city, Kenneth S. Murton, Wm. R. Smyth, Toronto, and others.

The Bancroft Timber Co., Ltd., with headquarters in Toronto and a capital stock of \$1,000,000, is among the new organizations who have secured a provincial license. The company is empowered to carry on and do a general business in timber, pulpwood, lumber and wood products of all kinds and to conduct a general wood pulp and paper business. Among the incorporators are S. D. Pearce contractor, of New York City, Kenneth S. Murton and Wm. R. Smyth of Toronto.

The Utterson Lumber Co. of Utterson, Ont., of which P. J. McNally is manager, are carrying out extensive improvements to their plant. Alterations are being made all through the mill, while a heavier engine and heavier shafting are being installed. The company have several seasons of heavy cut hardwood and the market looks very favorable for the future. It is expected that it will continue so for some time with prices stiffening.

The Waste of Wood by Uncle Sam

With the Yanks fighting to get Canadian newsprint, it sounds incredible that there is enough wood wasted in the United States to give that country 40,000 tons of paper daily. Yet such is the statement of R. G. Skerret, made in the Scientific American, and backed up by statistics from the U. S. Department of Agriculture and the laboratories of the Forests Products. He declares that there is more waste in the lumber industry than in any other, and that at present only 320 feet of merchantable lumber can be taken from 1,000 feet in the log.

In addition to the paper mentioned above, Skerret declares that by scientific methods, 3,000 tons of resin, 600,000 gallons of ethyl alcohol and 300,000 gallons of turpentine could also be extracted daily from the wood waste. Ethyl alcohol, the product of sawdust, is very useful industrially, and already, much used abroad as a fuel in mo-

tors in place of gasoline. The U. S. cuts down 40,000,000,000 feet of lumber a year. The Wood Waste Exchange is doing much to demonstrate the value of these by-products of wood, the manufacture of which, it is said, European nations will certainly take up extensively.

National Wholesalers Will Meet in Washington

The annual convention of the National Wholesale Lumber Dealers Association will be held this year in Washington, D. C., and the dates are Wednesday and Thursday, March 24 and 25. Many important matters will come up for discussion and a splendid programme is being arranged. Mr. Gerard Power of St. Pacome, Que., and Gordon C. Edwards of Ottawa are trustees of the N. W. L. D. A., of which Horace F. Taylor of Buffalo, N. Y. is President. E. F. Perry of New York is secretary of the Association.

Live Advertising of Western Ontario Firm

R. Barnhardt, manager of the Wm. Shirton Lumber Co. Ltd., Port Colborne, Ont., believes in advertising and in making bright, attractive announcements in the local papers. Here is what was said by the firm in a recent two-column display space:

An interesting industrial exhibit under the asprices of the Seaman-Kent Co. Limited, will be shown at the Grand Theatre on Friday and Saturday, January 30th and 31st. This picture is being shown all over Canada, and we are fortunate in having secured it for the benefit of the people of Port Colborne and Humberstone. The exhibit comprises 1,000 feet of motion picture film, showing the manufacture of hardwood flooring from the tree to the finished product. Produced locally under the auspices of the Wm. Shirton Lumber Co., Ltd. R. Barnhardt, Manager.

Kootenay District Wants Pulp Mills

Pulp and paper from Kootenay timber may soon be a new industry for the interior of British Columbia. It is one of the projects which Mr. W. A. Anstie, manager of the Forest Mills Limited, has in outline plan for his present mission to London, where he has gone to interview his principals for the complete re-organization of the concern whose timber holdings are the largest held by one company in the upper country.

Mr. J. R. Poole, secretary of the Mountain Lumber Manufacturers' Association, with headquarters at Nelson, stated that it was a very likely development in the interior, where a large percentage of timber is not suitable for anything else. He stated that along the Kootenay and Arrow Lake and the upper Columbia River, large areas which are being logged for lumber, could at the same time have the pulp timber taken off. It would, he said, be an economical method of getting out the pulp wood. Friends of Mr. Anstie are confident that in the plans he has while in London, will be included the securing of capital for a large pulp and paper industry to be established at some central point on the great inland waterways of the Kootenay.

Speaking of conditions in the lumber industry, among the manufacturers he represents, Mr. Poole said:

"The mountain mills have shared in the general activity in the lumber trade. Last season the reserve stocks were reduced by about 60,000,000 feet, to meet demand. The cut was less than in 1918 by 50,000,000 feet, the total being 240,000,000 feet. The reduction in output was due to several causes, some of them, through losses by fire, being unforeseen. Labor in the previous winter season had been scarce and all last year the mills suffered from shortage of help.

"Our mills have no plans ahead," added Mr. Poole. "The logs must be got out in the winter season ready for running when the right stage of water occurs in the streams. This winter big preparations have been made. So far the snowfall has been so light as to be a bar to work in the woods, but there is every indication of a big stock of logs for the season. Some large concerns with logging railways can get out logs all the year round, but are dependent on the rivers to take the logs to the mills. Very few mills in the interior operate in the winter. Our season is practically over the first week of December."

According to Mr. Poole, interior mills have felt very little handicap from car shortage for shipments, though the increasing demand from the United States has taken all the cars that can be secured.

It is a matter of universal business concession that a man will lean toward his friends when it comes to distributing his business favors. Consider then, what a splendid asset, an extensive business friendship really is.

The average man is going to spend most of his earnings for something. The wise retailer of lumber is the man who is always making a bid for a share of those spendings.

Ontario Retailers Will Gather in Hamilton

Splendid Programme Arranged and Large Attendance Assured at Convention Which Meets on February 24 and 25—Agenda of Busy Sessions

The annual convention of the Ontario Retail Dealers' Association, which will be held at the Royal Connaught Hotel, Hamilton, on Tuesday and Wednesday, February 24 and 25, promises to be one of the most representative, profitable and outstanding trade gatherings ever held in the history of the province.

Arrangements have been perfected by the local committee in Hamilton, the members of which have been working diligently in carrying out the details. All the visitors will be accorded a warm welcome and as there are many important matters to come up on which definite, decisive action will be taken, it behooves every alert distributor of forest products in Ontario to be on hand whether he is a member of the organization or not. It would be well for representatives to get in touch with the Secretary, H. Boulton, Crown Office building, Toronto, or write to the Royal Connaught hotel direct in order to be assured of accommodation as, from present indications, there will be a record attendance.

Tuesday, February 24

10 a.m.—Meeting of the Directors of the Ontario Retail Lumber Dealers' Association. Reception of visitors, registration of delegates, etc.

2 p.m.—Opening of business sessions. Presentation of annual reports of President Thomas Patterson, Secretary Boulton, and the standing committees of the year as well as the appointment of various committees on resolutions, etc., which will serve during the convention and bring in reports. In the evening there will likely be a theatre party.

Wednesday, February 25

10 a.m.—Business session devoted to the discussion of an Association Traffic Department to deal with the transportation difficulties of members, claims for overcharges, classification problems, freight rates, etc. Other topics which will be taken up will be Standard Order Forms, Standard Sizes, Standard Grading of Lumber, Quotation and Deliveries, Business Assessment Act, etc.

2 p.m.—Election of officers, receiving of reports from standing committees, discussion on the Mechanics Lien Act, Standard Moulding Patterns, Workmen's Compensation Act, Local Associations, Trade Relations with Wholesalers and Manufacturers, etc.

Word has been received from Hon. W. E. Raney, Attorney General of the province, suggesting that a committee of the Legislature be appointed during the coming session to take into consideration the passing of a new Mechanics Lien Act and that such a committee should be prepared to bring in a definite report at the session in 1921. This does not meet with the views of the Directors of the Association who are urging through their solicitor, Mr. Jennings of Toronto, that the work of revising the present obsolete measure should be proceeded with during the session that will come off in a few weeks. It is felt that the matter has been long enough delayed and such an act, as is on the statute books of Ohio, Wisconsin and other states, is one calculated to meet the requirements of the Ontario retail lumber dealer, the contractor and the builder's supply man as well as the architect, all of whom are united in their desire for a decided improvement to the present piece of legislation. Hon. Mr. Raney has been notified to this effect and strong pressure will be brought to bear to have the matter dealt with without further delay. A draft of the proposed act has been sent to him.

Annual Dinner and Entertainment

The lumbermen of Hamilton will entertain all the visitors and also the members of the Wholesale Lumber Dealers Association Inc. to a banquet which will be held at the Royal Connaught hotel on Thursday evening, February 25. Every effort has been put forth to ensure the enjoyment and success of the event which will wind up the two days' proceedings. Short addresses will be delivered by noted speakers and a splendid programme of music and song presented.

The recent membership campaign, which has been conducted by the Association, has had the result of bringing in a large number of recruits and the showing in this respect will be very gratifying. The report of the Treasury will also show a handsome balance on the right side of the ledger. During January over one hundred members paid in their fees for the coming year and each mail is bringing in remittances from all parts of the province.

Hamilton will be a great rallying centre of the retail trade on

Tuesday and Wednesday, February 24 and 25, and there will be much to see, learn and hear. Retailers will be present from all sections of the province and an attendance of over two hundred yardmen is confidently looked for.

Brotherhood of Carpenters Make Demands

It will be remembered that about a year ago the Brotherhood of Carpenters made certain demands on the wood working industries of Toronto but were not successful in their campaign. It now appears that similar attempts are being engineered in other places such as Ottawa, Guelph and Windsor with the hope of scoring a victory. In Windsor there is no union governing the men in the factories but the contractors of that city have been approached for a certain scale of wages. The Ottawa woodworking industries are now being asked by the District Council of the United Brotherhood of Carpenters and Joiners of America, to give consideration to certain demands. Notice has been sent to manufacturers of sash, doors, interior finish, cabinet and wood work in general by the Business Agent of the District Council who has submitted articles of a proposed agreement for May 1st, 1920, and states that a committee of the Brotherhood of Carpenters and Joiners is desirous of meeting with a committee from the manufacturers "in order that we may try and come to an amicable settlement."

The exactions of the men are regarded as excessive and some action will likely be taken on the matter at Hamilton and the whole question thoroughly discussed.

The Articles of Agreement as submitted in Ottawa are as follows:

Clause 1. The parties of the First Part agree to hire only such woodworkers who work in factory, including foreman, who are members in good standing of the United Brotherhood of Carpenters and Joiners of America, who carry the current working card issue by the above named organization.

2. It is agreed that eight (8) hours during the twenty-four (24) shall constitute a day's work, between 8 a.m. and 5 p.m. on the first five (5) days of the week, allowing one hour for lunch.

Four (4) hours only shall be worked on Saturdays between the hours of 8 a.m. and 12 noon.

3. Agreed that the minimum rate of wages shall be 65 cents per hour, but to those already being paid this minimum and more shall receive 10 per cent. increase.

Be it also agreed, that operators of any kind of wood-working machines, shall receive the above minimum rate of 65 cents an hour.

Those who tail said woodworking machines and helpers in the shop and mill shall receive a minimum rate of 55 cents an hour.

4. Agreed that the minimum rate of wages for apprentices shall be 30 cents an hour for the first year, 40 cents an hour for the second year, 50 cents an hour for the third year and the minimum rate for the fourth year.

5. Agreed that no man shall be employed over the age of 22 as an apprentice, if above this age he must receive the minimum rate of pay.

6. Agreed that no overtime shall be worked except it being absolutely necessary and shall then be paid for at the rate of double time.

Permission in writing must be obtained from the Business Agent for all overtime work. Also work done on the following holidays:—New Year's Day, Good Friday, Dominion Day, Labor Day, Thanksgiving Day and Christmas Day, shall be paid for at the rate of double time, as well as work done on Sundays.

No work shall be allowed under any pretence on Labor Day except for the saving of life and property.

7. Agreed that all employees herein mentioned shall be paid once a week on the job, not later than quitting time.

8. Agreed that all men sent to erect or do work on the outside must be paid the outside rate of wages. No piece work or contract work shall be permitted.

Many Annual Meetings Elect New Officers

Canadian Forestry Association Annual

The Canadian Forestry Association held its annual meeting recently in Quebec City, and considerable important business was transacted. The report of the directors recalled the birth of the Association in January, 1899, when the late Sir Henry Joly de Lothiniere was present, and made a comparison between its membership then and its growth and importance of the present. The report also dealt with the Dominion-wide campaign to extend technical forestry supervision over licensed timber berths in the three Prairie Provinces and the railway belt of British Columbia as set forth in the report of the directors at the last convention, which met with strenuous opposition on the part of the Minister of the Interior, who finally suspended the Association's grant from the Dominion Treasury.

The campaign for reforms of forest administration in Ontario, Nova Scotia and on Dominion lands was dealt with, as well as the forest system of protection in Ontario; the forest service in New Brunswick; the securing of fire legislation in the Prairie Provinces, and other enterprises involving open agitation that have well illustrated the potency of the Association's educational propaganda.

The educational work for the enlisting of public co-operation in forest fire prevention was referred to as being carried out to the limit of the Association's purse.

In point of membership the report shows that the strength of the Association in this regard is 10,000, with members in India, Ceylon, Russia, Sweden, Denmark, South Africa, Australia, New Zealand, France, Spain, and 250 in the United States.

The Secretary-Treasurer's reports were also read and adopted, and a motion of Mr. Sweezy to increase the membership of the Board of Directors was adopted.

A report of a special committee on the standardization of fire protection laws was read.

Mr. William Power, of Quebec, who is a believer in provincial autonomy, objected to the report, saying the different provinces should be permitted to carry out their own regulations, and pointed out that the Province of Quebec had good laws in this respect, and submitted that each province should regulate its own standards. The report was dropped.

Colonel Harkin suggested the appointment of regional advisory committees in each district to study questions and report to the Association the benefits of their observations on all questions relating to the welfare of the Association.

Mr. William Power, of Quebec, moved the following resolution: "Whereas the Canadian Forestry Association has demonstrated its usefulness in the spread of forestry propaganda throughout the Dominion of Canada, and has endeavored to be of maximum usefulness for the protection of forests administered by the Dominion Government.

"Resolved: That this Association here assembled in convention, petitions the Minister of the Interior to restore the annual grant of \$4,000, hitherto given to the work and recently suspended."—Carried unanimously.

Mr. G. C. Piche, chief of the Forestry Branch of the Quebec Crown Lands Department, wanted to know from the President what had become of the special committee named by the Association in 1913, to study and report on the branch work of kindred Associations, and if the said committee had made a report or not.

The President was unable to answer the question, saying he did not think any report existed and presumed the committee did not function.

The selection of officers for the ensuing year took place and resulted as follows:

President—C. E. E. Ussher.

Vice-President—Dan. McLachlin.

Board of Directors—Colonel J. S. Dennis, Hon. Sydney Fisher, Gordon C. Edwards, Col. J. B. Miller, F. C. Whitman, William Little, Clyde Leavitt, E. Stewart, W. B. Snowball, T. W. Dwight, Hon. W. C. Edwards, G. Y. Chown, Hon. W. A. Charlton, William Power, M.P., Hon. Arthur Meighen, Angus McLean, Alex. McLaren, R. H. Campbell, Dr. B. E. Fernow, Ellwood Wilson, Hon. H. Bostock, G. C. Piche, Alex. McLaurin, Rev. Mon. Roy, A. P. Stevenson, William Pearce, J. A. Gillies, C. Jackson Booth, Sir William Price, Lieut.-Col. J. B. Harkin, A. S. Goodeve, W. C. J. Hall, Brig.-Gen. J. B. White, D.S.O., E. J. Zavitz, Geo Chahoon, R. D. Prettie, Hon. N. Curry, Hon. A. C. Flumerfelt, H. R. MacMillan, Albert Grigg, Percy B. Wilson, Hon. Smeaton White, J. S. Gillies, John Black, Col.

Thomas Cantley, W. E. Golding, Hon. N. Garneau, David Champoux, W. E. Bigwood, Cyril Young, Vere C. Brown, John W. Dafoe, G. P. Marnoch, R. O. Sweezy, Avila Bedard.

Quebec Limit Holders Annual

The annual meeting of the Quebec Limit Holders' Association was held recently in Quebec city. Dan McLachlin, of Arnprior, President of the Association, presided and reports of the business done during the past year were presented and adopted:

In the report reference was made to colonization and difficulties between settlers and limit holders. It pointed out that if limit holders were consulted good arrangements could be made to have amicable settlements that would obviate any unnecessary difficulties.

The election of officers for the year 1920 resulted as follows:

President—Mr. M. C. Small.

Vice-Presidents—Messrs. A. J. Price and F. M. Anderson.

Executive Committee—Messrs. John Black, H. Biermans, S. Z. de Carteret, George Chahoon, Archibald Fraser, W. Gerard Power, Wm. Russell, F. I. Ritchie, Brig.-Gen. J. B. White, and G. M. Stearns.

Ex-Presidents—Rod. Tourville, M.L.A., Alex. MacLaurin, S. P. Grogan, Wm. Power, Ed. Ouellette, M.L.A., D. McLachlin.

Auditor—P. B. Murphy.

Secretary-Treasurer—Paul G. Owen.

Forest Protective Associations Meet

At the annual meeting of the Laurentian Forest Protective Association held recently in Quebec City the following officers were elected:

President—Robert P. Kernan, Quebec.

Vice-President—A. J. Price, Quebec.

Secretary-Treasurer—P. J. Owen, Quebec.

Directors—C. A. Sewell, Col. B. A. Scott, Quebec; W. T. Grant; A. T. Turner, E. J. Gotma, Quebec.

Manager—R. L. Seaborne, Quebec.

The Southern St. Lawrence Forest Protection Association was also held. The election of officers and directorate for the ensuing year resulted as follows:

Hon. President—W. G. Power, St. Pacome.

President—R. L. Montgomery, New Richmond.

Vice-Pres., Western Division—J. V. Perrin, Riviere du Loup.

Vice-Pres., Eastern Division—Charles Maclay.

Directors for Western Division—Arch. Fraser, Edmundston, N. B.; W. G. Power, St. Pacome; Alf. G. Quincy, Notre Dame du Lac; D. C. A. Atkinson, Etchemin; H. M. Wilson, Rimouski; E. A. Rockett, Sherbrooke.

Manager for Quebec—C. B. Guerrin.

Directors for Eastern Division—Angus McLean, Bathurst, N. B.; David Champoux, Campbellton, N. B.; William Russell, Matane; H. E. Calhoun, Gaspé Basin; George C. Scott, Boston.

Manager—J. D. Brule.

Secretary-Treasurer—P. J. Owen.

Pulp Business Booming in Nova Scotia

The Clyde River Pulp and Paper Company's property near Shelburne has been acquired by the Becker Company, of America and England, the name of the local concern being changed to "The Clyde Pulp Company," with head office in Halifax, and H. I. Mathers as managing director. A great deal of development work has been done, and the capacity of the mill has been brought up to thirty tons of "wet" per day. The company has 40 employees engaged in cutting pulp logs for the spring drive. It is expected that by the spring there will be 4,000 cords of pulp wood available for the commencement of grinding operations. Frank Ouellette, formerly of the MacLeod Pulp Company, is manager of the plant. With the mills at Liverpool in new hands, and the big plant under way at Bear River, the making of pulp is becoming one of the more important industries of Nova Scotia.

The man who invests nothing but money in a retail yard seldom accomplishes much. The one who adds a liberal quantity of brains and energy to his financial investment, generally takes the cake.

Wantonly Wasting Many Growing Forests

Quebec Government Should Prevent Settlers Denuding Richly Wooded Lands and Revise Cutting Regulations—How Pulp Companies Reafforest

By Frank I. Ritchie, Three Rivers, Que.

I have read with considerable interest in the Financial Post of September 27th. an article under the heading—"Reforestation is Necessary to Preserve the Pulpwood Limits from Very Serious Depletion," and as I thoroughly concur in this opinion, and have for some years felt that reforestation was the life of a Pulp & Paper Company, I offer a few remarks with the hope that other lumbermen will take up the discussion, so that various opinions can be brought out on this all important subject. In your article, I see that "The Laurentide Company, Limited, was the first Canadian Company to investigate this question, and had the far-sightedness and courage to tackle the problem man fashion. In 1908 the first experimental plantations were made, and these were continued on a small scale until 1914, when about 150,000 trees were planted. The nursery was enlarged in 1915, and each year since then, until now the number of trees for planting will reach 2,000,000 in 1921. This year 1,000,000 trees were planted. It is planned to plant annually a little more than the number cut, and to build up an area of approximately 400 square miles of planted timber, which will be cut on a rotation of 40 years, that is, 1/40 of the area (or 10 square miles. or 6,400 acres) will be cut each year and immediately replanted. This will supply timber in perpetuity to the mill."

The Laurentide Company's mill has a capacity of approximately 450 tons per day; thus we apparently have a definite policy thought out and put into execution by one of the most prominent companies in the country.

What is not quite clear to me in the article referred to, is the number of trees to be planted per annum. It takes about 1,500 trees to plant an acre and on this basis, if 2,000,000 trees were planted, it would take approximately 192 years to plant 400 square miles, thus at the end of 40 years, only 83 1/3 miles would be planted. It is evident that this is not the intention, if the mill is to be supplied, therefore, it must be intended to plant 10 miles or 6,400 acres per annum to obtain the 40 year rotation referred to.

Reforestation Plans Run Into Money

Figures obtained, show the lowest cost for planting would be about \$22.00 per acre, arrived at as follows:

With 1500 trees to be planted to the acre, taken at \$8.00 per M., the cost would be as follows:

1,500 trees at \$8.00 per M.	\$12.00
Labor and supervision, per acre	5.25
Land, per acre	5.00
Total	\$22.25

—Say \$22.00.

The above does not allow anything for preparation of land, thinning out trees from time to time, supervision, fire protection, etc.

If the 40 year rotation plan is carried out this would mean that at the end of the first 40 years, that is, when the first cutting is ready, the company would have spent about \$21,790,485.37 in reforestation, estimated at the price of \$22.00 per acre, plus interest at 6 per cent. compounded. Therefore, to estimate the charge on the first cut you must take the interest at 6 per cent. on \$21,790,485.37, plus \$140,800.00 for the cost of replanting the first ten miles cut. This will amount to about \$1,428,229.12, and this, therefore, would be the stumpage charge per annum in perpetuity.

If \$5.00 per acre is considered too high for land for planting, it is always possible to use limits, but this would mean a very much higher cost per acre for planting, owing to their location and the difficulty of obtaining labor; also to the irregularity of the land. In this case, at the end of a 40-year period, when the Company was prepared to make its first cut, it would have its forest on land that is not its own, which would have cost up to that time, at \$17.00 per acre, approximately \$16,838,102.34 to reforest, and the Company would be face to face with the proposition of paying stumpage to the Government at whatever rate it might then decide to charge.

Bogus Settlers and Timber Pirates

Having arrived at the above, one must not forget the possibility of the whole or part of the investment being wiped out during any period of this growth by forest fire. In such case, should the plantation have reached the age of 40 years, the salvage from any serious fire would be at most on 1/4 of the planting, namely: the

trees between the age of 30 to 40 years. as under this, trees would be of no value whatsoever.

The Québec Government has recently shown considerable activity in the question of reforestation. It has, however, concerned itself chiefly with the question of reforestation by planting, a method which, while positive enough, and the only one practicable in some cases, is also the most expensive and laborious method of perpetuating our forest. On the other hand, the Government by its colonization policy, is permitting extensive deforestation. Enormous areas, which are already naturally wooded, have been and are being denuded; (some of which may make farming land), but most of it is not fit for cultivation. This well timbered land is being sold to colonists, many of whom are bogus settlers and timber pirates, for .60 cents per acre.

These settlers are also a menace to the other timber lands adjoining different cantons, or settlements. I know of no settlement in our Province or elsewhere, where enormous areas have not been burned, owing to the settlers' carelessness in clearing their land. One fire alone in the Abitibi district burned 200 square miles of timber lands, cost 220 lives in the flames, and caused dire results generally. In the last few years, the largest number of lots have been located in the Abitibi district, where I am informed only one fair crop has been harvested in the past five years, the rest having been destroyed by frost. History shows that many of the settlers do not stay on the lots once the timber has been removed.

The Government's policy is to prohibit the exportation of pulpwood from Crown Lands. This law is being nicely evaded by the bogus settlers above referred to, as the wood cut on their lots can be exported. The Government should see to it that their intentions are being carried out by their officials, if they want to advocate reforestation and conservation, as you have on the one hand, the Government parting with an acre of timber for .60 cents, and, on the other hand, asking the Pulp & Paper Companies to reforest at an initial cost of \$22.00 per acre plus interest compounded for 40 years at 6 per cent.

Should Guard Every Wooded Area

Clearly, if the Government is going to establish any rational forestry policy, I think its first step should be directed towards preserving what it already has. Before going deeply into such an elaborate method of reforestation as planting, it would seem more apropos to guard, and jealousy guard, every area already wooded. What avails it to place some struggling young trees on one acre, when at the same time another acre of firmly established forest is being ruthlessly denuded.

From the above it will be seen that on the one hand we would have pulp and paper companies trying to plant at an enormous cost, and the Government, while encouraging this policy, sacrificing and wantonly wasting the already growing forests.

While the Government is advocating reforestation by planting at an enormous cost as above shown, I find throughout the entire district of the St. Maurice Valley, a general growth of evergreen, varying from the seedling to the full grown tree, and if the Government was to advocate natural reforestation and help the same by revising its cutting regulations, which are practically equivalent to prohibiting the application of scientific methods, and permit operators to cut all trees liable to blow down, being careful to leave a few large trees for seeding purposes in places where foresters decide that such trees could be left to advantage, I believe these forests would rapidly regenerate themselves.

It would be advisable that operators also take the tops down to 2 in. in diameter and in this way remove all the merchantable wood of the tree and eliminate the necessity of top-logging. This would reduce the fire risk on the cut over areas.

In the particular sections where hardwood predominates, it is practically impossible to reforest at the present time, as cost of thinning and cutting the heavy growth of hard wood, would be so high that it would not pay.

Different Kinds of Burned-Over Land

Of burned over areas, there are three kinds to be considered:

First, where the soil is so shallow that once burned, the rock is exposed, and nothing will grow again.

Second, where the ground is good and, in the course of a few

years, a growth of poplar and birch, together with spruce and balsam springs up, and, in the course of time, the latter trees kill out a great percentage of the poplar, and, eventually, these lands become first-class stands of merchantable wood, fit for pulp.

Third, sandy soil, where from 5 to 10 years after being burned over, a rapid growth of cypress or jack pine springs up, which, in some cases, is mixed with spruce and balsam. I know of a case where this cypress growth has been burned over a second time, and has grown up again a few years later.

The above is the outcome of observations, and I give them for what they are worth.

Personal Paragraphs of Interest

Hubert C. Foy, of H. R. Goodday & Co., lumber exporters, Quebec, has left for England.

Ellwood Wilson, of the Laurentide Co., Grand 'Mere, P. Q., has been on a visit to Florida.

W. T. Mason, of Mason, Gordon & Co., Montreal, left recently on a business trip to British Columbia.

D. R. Fraser of D. R. Fraser & Co. Limited, wholesale and retail lumbermen, Edmonton, Alta., passed away recently.

F. R. Burton of the Long Lumber Co., Hamilton, left recently on a business trip through the Southern States. He will be away for several weeks.

J. M. Williamson, of Detroit, representing Hugh Stewart & Co., manufacturers and dealers in West Virginia hardwoods. Charleston, W. Va., was a recent business visitor to Toronto.

Cook Brothers, wholesale lumber dealers, have moved from 20 St. Alexis Street to Room 35, 4 Hospital Street, Canadian Pacific Railway Telegraph Building, Montreal.

W. J. Phymister, representing W. M. Crömbie & Co., 101 Park Ave., New York, manufacturers and wholesalers of white pine, North Carolina pine and spruce, was in Toronto recently, calling upon the trade.

C. G. Anderson, of the C. G. Anderson Lumber Co., Toronto, who attended the recent convention of the Canadian Lumbermen's Association in Quebec city, is spending a few days on a business trip throughout the Maritime Provinces.

T. A. Sparks, manager of the Northern Lumber Company of Winnipeg, was elected President of the Western Retail Lumbermen's Association, held in Winnipeg, recently. R. Skov of High River, Alta., was returned as Vice-President.

J. Fraser Gregory of Murray & Gregory, Ltd., St. John, N.B., is spending the winter months in California. The firm have five winter mills running at the present time, three of which are operating in Quebec. The company are also cutting about 24,000,000 ft. of logs.

A. K. Shives, president of the Aleza Lake Mills Ltd., Prince George, B.C., and wife, are spending a few weeks in the East. Mr. Shives is a son of the late K. Shives of the Shives Lumber Co., Campbellton, N. B., and has been engaged all his life in the business. After spending some time visiting relatives in Campbellton, he came to Toronto recently and intends returning to the West next month. The Aleza Lake Mills run a well-equipped spruce plant at Prince George, with an output of about 4,000,000 ft., annually.

New Mills Being Erected at Campbellton

The Fraser Companies now own eleven sawmills in New Brunswick and a new shingle mill at Campbellton, N. B. Construction has been completed and the plants are being equipped and will be ready for operation in the spring. The main mill is two storeys high, of frame construction, 50 x 180 feet, and the shingle mill is 36 x 140 feet. The latter will have eight Dunbar shingle machines, with a capacity of 20,000 a day each. The saw mill will have two, 7 ft., Hamilton steam tension band mills, double cut, with 10-inch steam feed carriages. There will also be a vertical Mershon resaw; two, 68 inch Garland edgers of eight saws each, and two Hamilton trimmers of two saws each. The lath department will be fitted with two lath bolters and two lath machines of the Dunbar type. The capacity of the sawmill will be about 150,000 feet daily.

The power plant consists of four, 80 inch by 18 ft. boilers and a cross compound Corliss engine. Building the saw and shingle mills was started on November 1st last and the work was closed in by the end of the year.

The Fraser Companies now operate eleven sawmills in New Brunswick and Quebec provinces and the new plant at Campbellton will make the twelfth in operation. They also operate a large

bleached sulphite plant at Edmundston, and their chief products consist of rough and dressed spruce, white cedar shingles, railway ties and piano sounding board stock. All the mills of the company are band mills.

Sudden Death of John H. Eyer

John H. Eyer, one of the oldest and best known lumbermen in Toronto and head of the Eyer Lumber Co., Ltd., 34 Victoria St., passed away recently in the Toronto General Hospital. Mr. Eyer was removed from his home, 602 Avenue Road, a few days before suffering from an attack of appendicitis. The ailment had progressed too far before the physicians were called in, and the operation failed in consequence.

The late Mr. Eyer was born in the family homestead, Victoria Square, York County, in 1854 and came to Toronto in the early 80's where he embarked in the lumber business, which he followed up to the time of his death. In his younger-days he was known as an active cricketer and he always took an interest in athletics, being a member of the Lambton and Mississauga Golf Clubs. Mr. Eyer was also a member of the National Club. He leaves a wife, one son and one daughter. Alex. and Alf. Read of Read Bros., Ltd., wholesale lumbermen, are nephews of the deceased.

In the passing of Mr. Eyer another veteran in the wholesale lumber ranks has joined the silent majority. He built up a large business and enjoyed the confidence of his associates to a marked degree. There was a large and representative attendance of lumbermen at the last sad rites and numerous beautiful floral tokens were sent.

The Passing of David McNair

David McNair for many years prominent in the business life of New Westminster, B. C., and one of the pioneer lumbermen of the Coast, died recently in Los Angeles, Cal. He was a native of New Brunswick but located in B. C. about forty years ago in company with the late John Hendrie, and operated a sawmill at Nanaimo. Later they and the late C. M. Beecher organized the Royal City Planing Mills Co., which for many years was one of the main industries of the city. Keeping pace with the rising importance of Vancouver these in turn, with the late R. H. Alexander, organized the B. C. Mills Timber and Trading Co., in which all their saw milling interests were merged. The late Mr. McNair disposed of the bulk of his holdings a few years ago and retired, taking up his home in California on account of Mrs. McNair's failing health. He was an expert timber man and was among the first to secure timber limits on the Coast and until his retirement was prominent in the development of the lumbering industry.

John Holcombe Joins Silent Majority

The death occurred suddenly from heart failure at his home, Little Rapids, Thessalon, of John Holcombe, one of the most prominent business men of Algoma, of the firm of Holcombe Bros., lumber merchants.

Mr. Holcombe was born in Elgin county fifty-five years ago, the third son of the late Thomas Holcombe, one of the pioneers of Algoma, who was engaged in the lumbering and milling business. For the past year and a half the firm of Holcombe Bros. has been carrying on extensive lumbering operations at Monteith, on the T. & N. O. Ry. He was married in 1896 to Mamie Garson, only daughter of Robert Garson of Thessalon. Mr. Holcombe is survived by his wife and three sons, H. Basil Holcombe, recently returned from overseas; Clifford, at home, and Thomas Robert, on the staff of the Sterling Bank, Toronto; also by two brothers, Emanuel H., in London, Ont., and Samuel, of the firm of Holcombe Bros., and four sisters.

Lumbermen in the Forestry Association

At the annual meeting of the Canadian Forestry Association held at Quebec on February 3rd, a number of prominent lumbermen were placed on the Board of Directors. Mr. C. E. E. Ussher, Passenger Traffic Manager of the Canadian Pacific Railway, was elected President, with Mr. Dan MacLachlin, of Arnprior, Vice-president.

W. E. Bigwood, Angus McLean, J. A. Gillies, John Black, W. E. Golding, Hon. H. Garneau, David Champoux and Cyril T. Young were included in the list of new Directors.

One thing the lumberman, retailer or mill, has to be thankful for, is that no one ever will or can accuse him of burning his plant to make money. That is one thing that has never been done; that is, get enough insurance on a lumber plant to make a fire a good investment.

Pulp and Paper Makers Convene

Mr. Geo. Chahoon Head of Laurentide Co., Will Preside Over Activities of the Association for 1920

Mr. George Chahoon, of the Laurentide Co., Ltd., Grand Mere, was elected president at the annual meeting of the Canadian Pulp and Paper Association, held at the Ritz Carlton Hotel, Montreal, on January 30th. Mr. Howard Wilson, Montreal, was elected vice-president, and Mr. A. L. Dawe, Montreal, was re-elected secretary-treasurer.

Mr. J. A. Bothwell, the retiring president, reviewed the chief events of the industry during the year, pointing out its immense expansion. He protested against the regulation for price fixing of paper.

The reports of the various sections were submitted: Newsprint section, by Mr. G. M. McKee, chairman; chemical pulp, Mr. Angus McLean; mechanical pulp, Mr. D. A. Clarke; book and writing sec-

J. A. Bothwell, East Angus, Que.
Retiring President of the Canadian Pulp & Paper Association

tion, Mr. S. J. B. Rolland; coated paper, Mr. George W. Pauline; felt section, Mr. W. R. McNeil; technical section, Mr. J. Stadler; and Woodlands section, Mr. Robert P. Kernan.

In the report of the chemical pulp section, Mr. McLean referred to the production of sulphite pulp, which, during 1919, was approximately 546,000 tons and 336,000 tons shipped. The estimated production for 1920 is 668,900 tons, and of this quantity 450,200 tons is the estimated quantity for sale.

In the mechanical pulp section, 1919, proved, said Mr. Clarke, an eventful and successful year. From a winter, spring and summer of poor demand, the situation had changed to a fall and winter of great demand, thus paving the way for a successful year of 1920. After the Armistice, in 1918, people stopped buying, thinking they would see lower prices, but in June, 1919, paper jobbers, finding their stocks rather depleted, commenced purchasing, which soon filled the mills with orders. With prospects of a large foreign business to take away a large portion of our production, the future of the ground-wood industry seemed assured, and 1920 should prove a banner year for the groundwood mills with high prices ruling throughout the year.

In reviewing the work of the Woodlands section for the past year, Mr. R. P. Kernan said that the work of the section for the entire year was aimed at insuring for the paper and lumber industries a future supply of wood, and the present methods of cutting were considered only with this object in view. On the whole, the activities of, and progress shown, along certain lines by the Woodlands section, seemed to amply justify its existence, its usefulness would increase year by year, and it would become even a greater factor in handling all important questions connected with the present and future supply of the raw material which formed the basis of the great pulp, paper and lumber industries of this country.

It was decided, by the association, to grant \$5,000 to the educational fund for the promotion of higher technical efficiency in the industry.

Experiments in Disposal of Slash

The subjects discussed at the Forestry Conference in Montreal, ranged from railway patrol to the spruce budworm. But probably the most interesting question debated was the perennial one of slash

disposal. This is a never failing topic at forestry meetings—it has been discussed from every conceivable angle, and forestry engineers, lumbermen, forest fire experts, etc., have as many views as there are days in the calendar. Should the slash be disposed of immediately after logging operations, to what depth of the right of way should the debris be cleared, what methods should be employed, who should pay the cost, and is slash burning a commercial proposition viewed from the lumberman's point of view, and having regard to the fire dangers and consequent financial loss inherent on the accumulation of brush?

On the latter point some figures of interest to the lumbermen were presented to the Conference. From experiments made, it has been ascertained that the average cost of burning brush on the limits owned by the John Fenderson Company was \$3.32 per 1,000 ft. b. m. and on the Laurentide Company's limits \$2.18 per 1,000 ft. b. m. in one case and \$1.92 in another. It was generally admitted that the addition of such a large expenditure to the cost of lumbering makes it impossible for lumbermen to undertake the operation, unless assisted by the Government. Wood costs have risen to an alarming extent, and there would certainly be strong opposition on the part of lumbermen to adding to the already heavy expenditure. The cost will naturally depend upon local conditions, and further experiments will be necessary to demonstrate even an average cost for a given area. The feeling of the Conference was that no settled policy could be recommended until further data is available.

The subject of reforestation was dealt with at considerable length, and the joint committee of the Quebec Limit Holders' Association and the Woodlands section of the Canadian Pulp and Paper Association, outlined a policy of co-operation between the Quebec Government and the limit holders. The main principle is the bearing of the cost by the Government, it being recognized that the work is of a national character. Certain regulations are of course recommended, and the onus of working these out with the Minister of Lands and Forests is put on the executive committee of the Limit Holders' Association.

The holding of such conferences to discuss various questions is of great value both to the Governments and to the limit holders. No doubt some of the speeches are based on theory, but against that we have the experience of practical lumbermen, and this combination of theory and experience is helpful in solving problems which face the industry as a whole.

York County Lands for Reforestation

At a recent session of the York County Council in Toronto, a committee was appointed to consider the question of acquiring county lands for reforestation. The subject was introduced by Reeve Padget, of Markham Township, who is in support of his suggestion that the Council proceed with the reforestation according to the recommendations of the Government in this connection, called attention to the tremendous increase in the price of lumber, due, he said, mainly to the depletion of forests in Eastern Canada. The result of this cutting of lumber without regard for the future was very noticeable in the County of York, he declared, and he gave instances of areas that had suffered in this regard without benefit to the county from an agricultural viewpoint. Reforestation, he said, was necessary, not only for the sake of providing a source of lumber supply in the future, but also to control the water supply, prevent sand drifting, and to provide bird sanctuaries. He stated that many wild birds helpful to agriculture had migrated, never to return, as a result of the too general removal of the forests. Experiment had shown that planted forests paid a return of 5½ per cent. on investment in one year, that after 25 years the return was \$25 per acre, and after 40 years \$100 per acre. He asked that the Council consider his suggestion from the viewpoint of the good investment assured.

Deputy Reeve Pearson, of Newmarket, gave as evidence of the need of some action to restore timber growth in the county and throughout the Dominion a comparison of prices for hemlock lumber, showing that in 1894 the price was \$6.00 per thousand feet; in 1904 \$12.00 per thousand; in 1914, \$24.00 per thousand, and in 1920, \$50.00 per thousand. Private concerns in the Province, Mr. Pearson said, were not asleep when it came to providing for the future by tree planting. One firm had planted a million and a half trees and figured to be independent as regards to pulpwood supply, within a few years. The idea of reforestation as a county undertaking was sound financially and besides the presence of sufficient standing timber in the county would improve living conditions for the inhabitants by providing shelter and something worth looking at.

F. Stickwood, representing East Gwillimbury, spoke in favor of reforestation, from his experience, both as farmer and lumber manufacturer. He told of areas in the vicinity of Mount Albert, now covered with drifting sand, that had been covered with pine growing to a height that allowed cutting a 12 inch log at 125 feet from the butt.

Reforestation in Ontario Urgently Needed

Speaking on the "Forestry Problem in Ontario" recently at Guelph, E. J. Zavitz, provincial forester of Toronto, said that Ontario had scarcely yet awakened to the real needs of a progressive forest policy. The gross revenue obtained from Crown forest lands was considerably under that of European countries, although Ontario resources were much greater, nor had much thought been taken for the future. In older Ontario the percentage of woodland was comparatively small. Wood had been cleared off both arable and waste land and neither replanted. The danger that the United States may

E. J. Zavitz,
Provincial Forester, Toronto

soon cease to export valuable hardwood, added to the fact that many of the rural population depend on wood for fuel, makes it imperative that something be done to protect and improve existing woodlands and to reforest waste Crown lands.

Much educational work can be done by the establishment of demonstration forests on larger waste areas in the old parts of the Province. This had been done in Norfolk county with encouraging results.

Following Mr. Zavitz's address a resolution to the effect that the Ontario Legislature should be asked to undertake a progressive forest policy to maintain existing forests and to reforest waste areas was unanimously passed by the Union.

Possible Utilization of Sawmill Waste

"While I agree that, at the present moment, there is comparatively little waste material at the saw mills here which can profitably be used commercially, I am aware that there is a great destruction of material which will certainly be used commercially very soon—as soon, that is, as the experiments now being conducted in Canada have been a little more fully developed."

This was the reply of Dr. J. G. Davidson, of the B. C. University, who has himself experimented in the direction referred to, when seen with reference to an interview with a leading man, whose attention was called to the frequent comment upon the great waste of material constantly taking place in British Columbia sawmills' refuse destructors.

"At the present moment nothing that can be reasonably stored up and put in fair shape for burning is wasted," continued Dr. Davidson. "What is destroyed is a portion of the sawdust and very rough ends and hemlock that people will not be bothered with, and it would cost almost as much to hire a rig and labor to go to the mill and get these and cart them home as to buy the good burning pieces ready cut. The mills would be only too glad if people would send and take away this refuse."

Asked regarding the commercial use of the sawdust and other waste wood, Dr. Davison replied: "There are great possibilities in the distillation of this material in order to form charcoal, tar, etc., but, seemingly, at the present time the most promising field is in the direction of fermenting sawdust to form wood alcohol as a partial, or complete, substitute, for gasoline. One can say that this shows the very greatest promise, but can hardly as yet quite compete with gasoline at the price at which it is being supplied. It could very nearly compete. Yes, I have made considerable experiments in distillation myself and experiments are being made in other directions, and we are awaiting further developments."

Captain Dollar is Great Trade Promoter

Captain Robert Dollar, the nationally known lumberman, was the first man on the American continent to take a trade envoy to the Orient, and the first man to bring a small army of Oriental exporters and dealers across the Pacific to visit the various industrial plants of America and establish international trade relations. Captain Dollar is now in the Orient and will return to Vancouver in time to be present at the San Francisco foreign trade convention which will be held during the time the Vancouver board of trade members are on their Oriental tour. Expressions of regret on this situation have already been made, as many of the large traders in the Orient anticipate being in San Francisco at the convention at the time the Vancouver board will be in the Orient.

Mr. McFadden Looks for Busy Season

J. J. McFadden, of McFadden & Malloy, who operate large sawmills at Spragge and Blind River, Ont., spent a few days in Toronto, recently, previous to leaving for California with his wife and two daughters to spend the remainder of the winter months at Coronada Beach. Mr. McFadden, who is taking his first real holiday in many years, states that his firm are operating seven camps this winter, each of about a hundred to one hundred and twenty-five men, and that good progress has been made in getting out the logs, which are now being hauled to the streams. Last season the firm conducted only four camps so that their logging operations are considerably more extensive for the coming year. During his absence in the South, the interests of Mr. McFadden will be looked after by his nephew, J. P. Gillies, of Blind River.

Speaking of the outlook for 1920, Mr. McFadden stated to the "Canada Lumberman" that costs were increasing all the while, and that it would be necessary for the lumberman to get a considerably higher price for his product during the coming season than during the past year. While help was somewhat plentiful, it was still far from being as efficient as it was before the war. Wages are advancing all the time, food and general camp supplies constantly going up in price and general operating expenditures are mounting steadily. McFadden & Malloy expect to saw between 35,000,000 and 40,000,000 feet, principally of white pine, during the coming spring and summer, and are making extensive improvements to their mill at Blind River, which, it will be remembered, was purchased several months ago from Eddy Bros. of Bay City, Mich., along with their limits. The plant is being thoroughly overhauled and the equipment put on a modern basis in every respect. New Dutch ovens are being installed in the boiler house and the whole system of handling the logs and distributing the lumber throughout the yards improved. At Spragge the mill is in excellent shape and the firm are busy at the present time shipping out lumber, all the stock of last year's cut having been sold. Already a large number of inquiries concerning the output for the coming year have been received, and part of the stock has been sold. From reports received by Mr. McFadden, there is a great scarcity of stock all over the country and the demand for lumber during the next few months will be keen. He is looking forward to a banner year in the lumber business owing to extensive building operations and the increasing call, both at home and abroad, for forest products of all kinds.

Why Must Manufacturer Pay All?

Lift the business profits tax and prosper.

The government must have money to pay its war debts. True enough, but why take it all out of the Atlantic manufacturing provinces and British Columbia? No province in Canada has been as hard hit by this tax as British Columbia, says a Western correspondent.

On the prairies when a farmer takes a crop of grain off a field it is only a few months before he is plowing the same field for another crop, but when the miner takes a ton of coal from the mines of this province, a ton of ore from its hills or a boom of logs from its forests, it is almost a total annihilation of that resource and must be written off the ledger as depreciation to the total valuation of that asset.

There are many instances where the individual farmer of Canada has a much greater profit out of his year's work than the manufacturer, but the manufacturer is called upon to pay the business tax for the two.

A new province like British Columbia feels the effects of this monetary demand very keenly, especially when capital is required to install machinery, enlarge plants, expand commercial connections with the idea of doing an export business, and venture into new lines of industrial production.

While not accusing merchant nor manufacturer, what is more natural than they should conserve their limited resources in ore beds and timber limits?

Lift the business profits tax and watch the expansion in business.

Good Progress in Logging Operations

Weather Conditions Have Been Favorable, but Labor is Still Restless and Inefficient

Logging operations are progressing favorably in all parts of the country, and with the fine winter weather which has prevailed, the work of hauling the timber to the streams and getting ready for the Spring drive, is well under way. The cut of the woods will be considerably increased over that of last year, but even with the augmented production, there will be a market for every board that will be sawn and much more besides. As the months advance, the scarcity of forest products of all kinds becomes emphasized and is only brought home to the average man when he attempts to obtain a certain line of stock and finds that he cannot get it, or if it is procurable, the price is so firm that he receives a jolt and becomes quickly awakened to the abnormal conditions prevailing at the present time.

The Fassett Lumber Co. of Fassett, Que., say that their logging operations are in very good shape for this time of the year, their only drawback at first being a lack of snow. The weather has been exceedingly cold and the swamps are frozen over. Good progress is now being made with hauling considerable snow having fallen of late. Wages are steady and provisions continually advancing in price. The company intend taking out about 3,000,000 feet more in logs than they did last year. In regard to prices, there is a strong tendency towards higher levels at the present time, and the demand for lumber is very keen.

W. H. Miller Co. of Campbellton, N. B., report that they are all done yarding logs and have a few more yarded than they wish on account of the snow being light so far. There was recently a fall of about 8 inches of snow, which the firm say will start off their hauling. The cut this year will be about the same as last. There may be more logs come down the river but the mills do not expect to materially increase their output of last season. Labor is somewhat easier than last year although wages are higher and logs are costing this season \$3.00 to \$4.00 more than last year.

Austin & Nicholson of Chapleau, Ont., say that logging operations are proceeding fairly well and weather conditions have been good up to date. Labor conditions are somewhat unsettled and are increasing the cost of operating considerably. The firm anticipate that their lumber cut will be about equal to that of last year, but the number of railway ties taken out will be considerably less. Lumber prices are bound to be firm for some time.

Keenan Bros. of Owen Sound, Ont., are operating as usual on McGregor Island but state that present indications are for a smaller stock than usual owing to reasons beyond their control.

The C. Beck Manufacturing Co., of Penetanguishene, Ont., have nine camps in operation as against four of last winter. Bush conditions have been favorable. Help was scarce at the beginning but became more plentiful and early in February was not so good. Many men are still far from being efficient and wages and costs of provisions are increasing steadily. The recent advance in hay and oats have been particularly stiff.

Clarke Bros. of Bear River, N. S. assert that conditions for woods operations are ideal, "We never knew them to be better", and the present indications are that the cut will somewhat exceed that of 1919. Prices are extremely high and demand active and while the increased cut may somewhat offset these conditions later in the season, we shall doubtless see extremely high prices until the first of July.

J. B. Snowball Co. of Chatham, N. B., say: "The weather for lumber operations was ideal until Christmas except that we needed a little more snow to make it possible to haul off. Labor was more plentiful than any time since the war started and the general working conditions good. The only difficulty was that labor was unsettled. The men would not stay any length of time in the woods which kept crowds going in and coming out continuously and interfered with the efficient working and added to the cost. It looks to us as if our cut will somewhat exceed last year's owing to the favorable season for cutting and also the fact that snow did not come early enough to commence hauling off. The men thus continued yarding longer than we would have liked. Wages are 15 to 20% above last year; provisions cost almost the same the only increase being in sugar and molasses. Hay and oats are both dearer. It is generally estimated that logs will cost from \$5.00 to \$8.00 per thousand more than last year including the increase in stumpage. Unless lumbermen get considerably more this year for logs, their position will not be as good as the season of 1919."

The Davison Lumber & Mfg. Co., Limited, of Bridgewater, N. S., report that so far as they are concerned in that end of the province logging operations are proceeding most satisfactorily. There has been a plentiful supply of labor and the weather conditions have been all that could be desired. The Davison Company estimate

that from present indications there cut this year will be double that of 1919 and will be practically in the neighborhood of 30,000,000 ft. Costs of production are higher as wages have advanced probably 10 per cent. over last year. Provisions and general camp supplies are also going up in price, being on the average probably 5 per cent. above last season.

The Schroeder Mills & Timber Company, of Pakesley Station, Ont., report that they have not as much cut yet as they had last season, although at the present time they have taken out more timber than they had at this corresponding date in 1919. The latter was an exceptionally good season and the company got out 5,000,000 feet after they had caught up with their haul. They find supplies and wages both higher this season than last, and so far as efficiency is concerned, "there is no such a thing among 50 per cent. of the men." Most of them are "chuck samplers" running from one camp to another and trying the board. Mr. James Ludgate, manager of the company, states that he never saw men so restless as they were last fall. Organizers are springing up trying to organize them into a more inefficient bunch than they are now, if such a thing is possible. However, Mr. Ludgate adds, "there is no use grumbling. We have about 23,000,000 feet cut, of which we will sell probably 15,000,000 feet in the logs."

The Schroeder Mills & Timber Company will operate the Lauder, Spears & Howland mill on the Lost Channel during the coming year, drawing the lumber out by rail to Pakesley to pile and dry. The company have just purchased a block of timber, some pine and some hemlock, from the Parry Sound Lumber Company, Berth 3, in the Township of McConkey. This is tributary to the company's mill at Lost Channel.

Sudden Death of W. C. J. Hall

During the progress of the Canadian Lumbermen's Convention in Quebec city, the death took place of W. C. J. Hall, superintendent of the Laurentian National Park. He passed away very suddenly from heart failure in his office at the parliament buildings.

The late Mr. Hall, who was a son of the late Mr. George Benson Hall, in his lifetime the most prominent lumberman in the province of Quebec, with extensive mills at Montmorency, joined the Woods and Forests Department of the Province on the 5th of December, 1892; in 1895 he was appointed Superintendent of the Laurentian National Park, and in December, 1905, was also appointed Chief of the Forest Protective Service, which position he relinquished about two years ago on the transfer to the Department of Colonization, Mines and Fisheries of the National Park, of which he remained Superintendent. During his twenty-seven years of service with the Provincial Government, the late Mr. Hall proved a most zealous officer, taking the deepest possible interest in his duties, and his loss will be greatly felt by the Department. As Chief of the Forest Protective Service he was equally punctilious in carrying out his work.

The following resolution of condolence was passed at the Wednesday afternoon session of the Canadian Lumbermen's Association, being moved by Wm. Power, ex-M.P., of Quebec, and seconded by Alex. MacLaurin, of Montreal.

Having learned with deep regret of the death of Mr. W. C. J. Hall, Chief of the Forest Fire Protection Branch of the Provincial Department of Lands and Forests, who passed away suddenly this afternoon at 12.30 o'clock, while on duty in his office, from heart failure, we, the members of the Canadian Lumbermen's Association, here assembled in Convention, manifest our deepest regret over the death of Mr. Hall, son of the late G. B. Hall, and the Hall family, who were for over half a century identified with the timber and lumber trade of Canada; and deceased who was familiarly known by the members of this Association, like his late lamented father, was highly esteemed and respected for his many qualities and integrity of character.

Be it resolved: That the members of the Canadian Lumbermen's Association place on record their profound feelings of regret at the death and loss to society of so worthy a citizen and gentleman; they also express their deep sorrow and sympathy with the members of deceased's family in their sad and distressing affliction.

Brompton Paper Co. Gets Settlement

Much interest was recently occasioned by a bill presented before the Quebec Legislature, asking that the Brompton Pulp and Paper Company be required to pay taxes from June last in accordance with a decision of the county council which reduces the period of exemption from taxation from 25 to 12 years and the settlement of the matter has also caused much satisfaction.

It was finally settled by the company agreeing to pay for the next twenty years, taxes which will be levied on a basis of valuation which will not exceed \$950,000.

New Brunswick's Record Log Cut

The Yield Will be Over Three Hundred Million Feet—
Progress of Forestry Activities

At a recent meeting of the Forestry Advisory Committee, held in Fredericton, N. B., reports were received of the work of the scalers and the amount of cut which it was thought would exceed three hundred million feet. A compilation of the fortnightly reports received from the 46 rangers on the 620 logging camps on the Crown Lands showed over 230 million feet now on the books. The system of fortnightly reports is considered very valuable, because the central office at Fredericton is always fully informed on the situation. Also the licensee who receive copies of all the reports and are in a position to ask for a rescale if necessary, while the logs are still on the ground. The forest inspectors also report all check scale they make on the rangers so that the information regarding each camp is complete.

Many matters of interest and affecting the administration of the New Brunswick Forest Service were considered, and acted upon. The results of the Forest Rangers' examinations held since the preceding meeting were presented and certificates ordered sent to the ten rangers who qualified. The original appointment of seventeen rangers who had been taken on the staff since last meeting, were approved. These men will be subject to the usual six months' probation.

The cost of the organization for the past fiscal year was considered and plans made for the amount to be expended in 1920.

Reports were received on the progress of the permanent improvements undertaken in 1919. One lookout was in use the entire season with good satisfaction, about 106 miles of woods telephone constructed, the cost of sixty miles of which was equally divided between the Forest Service and Bathurst Lumber Company. These lines penetrate into the interior of the timber lands and will be of incalculable value in fire protection. This will also make possible the utilization of two outstanding peaks as look-out stations, Bald Mountain in Northumberland Co. and Mt. Carleton at head of Nepisiguit River. Cabins have been built, canoes and tool caches furnished the Rangers. It was decided to continue the policy of building woods telephone lines, cabins, etc.

A forest service pump, with 1,500 feet of hose, has been purchased and will be tried out shortly on some sawdust fires which must be extinguished before the fire season opens. Further purchases will be made if this gives satisfactory service.

Some features of the experimental work being carried on on the Bathurst Experimental Plot were discussed, including slash burning and the cost thereof. It was found that the actual cost of slash burning exceeded the amount usually named for such work. The result of the experimental plot work is being watched with interest.

The Forestry Advisory Board of New Brunswick directs the work of the scalers, game wardens and fire wardens of New Brunswick. The Board consists of five members, of which two, Archibald Fraser and D. J. Buckley, are representatives of owners of granted forest lands and of licensees. Thus those interested in the timber lands of the province have a direct voice in the administration of the Forest Service.

Eastern Lumbering Operations are Favorable

The Parrsboro, N.S., correspondent of the "Canada Lumberman," writing of logging conditions down East, toward the end of last month, has some interesting comments to make on the situation, when he says:

The present season has been particularly favorable for lumbering operations in Nova Scotia. The early autumn was unusually rainy, and when the cold weather came, in November, a month or so earlier than usual, the swamps, which had been filled by the rains, were soon frozen solid, and not likely to give any trouble to the lumbermen. There were some light flurries of snow, but nothing to interfere with chopping, and; in most cases, the opportunity for yarding was good.

In some parts of the country there has not been snow enough to make sledding, but in sections where the operators have taken the trouble to make smooth roads they have had excellent hauling during the first half of January. In places where the roads are rough snow was greatly needed and some operators began to be afraid that it wasn't coming, but an old saying or proverb is that "a Nova Scotia winter never rots in the sky." This winter is no exception to the rule, for, in addition to the prevailing cold weather, the latter half of January has brought an abundance of snow. New Brunswick, as a rule, has more snow than this province, but in the first part of this winter the snowfall there, as well as here, was exceptionally light.

So generally was this the case that not more than a month ago New Brunswick operators were expressing a fear that they wouldn't be able to get their logs out of the woods.

Of course, in some sections, particularly in northern New Brunswick, snow is less needed for making winter roads than it is for the part it plays in the spring freshets. Many logs are cut under such conditions that the only chance of getting them to a mill is by floating them down a stream, and many streams are so shallow that they will not float logs except when in flood. The head-waters of some large rivers are too shallow or too rocky for stream-driving, except when there is a freshet, and the longer a freshet continues the more satisfactory it is. Spring rains may and do cause floods, but they subside almost as quickly as they rise. With plenty of snow in the woods the freshets will continue and, in some cases, will increase in volume long after the rains have ceased.

Snow is, therefore, an important factor in the lumber business in these provinces, particularly in the latter part of the winter. Early in the season there may be too much of a good thing and it may even become somewhat of a nuisance, but too much snow is far better than none at all. Besides being of the least importance to the great majority of lumber operators, it is essential to the successful manufacture of maple sugar, and is a great boon to the farmers who get out their own fuel and fencing material. Fortunately there is now an abundance of snow in the woods with a prospect of more coming, so we may now reasonably expect a big cut of lumber with plenty of firewood and maple sugar.

Relative Advances in Wheat and Lumber

That 40 bushels of wheat now will buy 15,000 shingles whereas in 1914, the same amount of wheat would buy only 8,500 shingles is the subject of a cartoon by a progressive lumber paper, in emphasizing the relative cheapness of lumber when compared with such other products as wheat. The same lumber paper estimates that in 1914, 39 bushels of wheat would buy 1,000 feet of common lumber; in 1919 the same wheat would buy the lumber and, in addition, 20 sacks of cement and 20 sacks of plaster. Because the farmer has been complaining about the high cost of building materials, wheat in this instance was chosen for the comparisons.

A loud cry for help last summer came from the farmer and the question has been repeated and re-emphasized—how make farm life more attractive. One answer is to improve the housing conditions of the farm family, the farm community, the farm animals and the farm implements; in other words, to improve both the living and the working conditions on the farm. Just now, before the spring sowing season is on, the farmer can well plan for the betterment of his buildings.

New Unjammable Door Adopted on Steamers

Many lives are lost annually in railway and shipwrecks through doors becoming jammed in their frames, thus imprisoning passengers in staterooms, lavatories, etc. To prevent this a door known as the Henderson Unjammable Door (patented) has recently been designed and the Canadian rights offered for sale. The door is very simple in construction, the special features being that the top, bottom and lock side are bevelled to an angle of about 30 degrees. The door frame, instead of being rabbeted is bevelled to suit, thus any twisting or distorting of the frame merely tends to force the door open. A special lock has been designed so that even though the door is closed and locked, should an accident occur, and the door frame be forced out of square, the catch is released and the door opens. The C.P.R. have adopted this type of door for all new passenger boats that they are building in Scotland.

This door should prove desirable in cold climates. The bevel on this door and on the frame eliminates friction and rubbing as the door closes. Thus the edge of the door, and, if necessary, the bevel on the door frame could be covered with a thick felt, making an absolute wind and draught-proof door. Mr. Wm. Henderson, 30 "The Oaks," Bain Ave., Toronto, who is widely known in the lumbering world, through his long connection with the Shantymen's Christian Association, of which he is superintendent, is the patentee of the unjammable door.

Canada's Growing Paper Exports

Government returns for November show newsprint exports for the 8 months ending Nov. 30, 1919, were \$32,203,392, compared with \$24,988,879 one year ago, and \$21,77,807 two years ago. For November alone the exports compared as \$4,159,078 to \$3,186,231 in 1918.

The total paper exports for the 8 months amounted to \$37,985,676, as compared with \$28,886,120 in 1918, and \$24,018,055 in 1917.

Foresters and Lumbermen Hold Conference

Timely Topics Discussed at Important Gathering—Disposal of Slash, Aerial Photography and Wood-destroying Diseases Create Lively Debates

The annual Forestry and Lumber Conference held in the Windsor Hotel, Montreal, on January 28th and 29th was largely attended, representatives of various companies, firms and governments, coming from Quebec, Ontario, New Brunswick, and the U. S.

The subjects discussed covered a wide range, including railway fire protection, slash disposal, aerial photography, diseases of woods mixed stands, and hard and soft woods. The first day the proceedings were under the auspices of the Quebec Forest Protective Association, and the second day under the auspices of the Woodlands section of the Canadian Pulp and Paper Association.

Mr. R. Kernan of the Donnacona Paper Company, Quebec, presided at all the sessions. In opening the proceedings of the first day, Mr. Kernan introduced the subject of railway fire protection, pointing out the importance of the matter, especially in view of the high price of pulpwood and lumber. The protection in the Province of Quebec had never been so efficient as under the present system of co-operative fire protective associations, in which the Government had taken an active part. But the problem extended to all the provinces in the Dominion, and that morning they would discuss the question of railway patrol. If there were defects in this system, they desired to discuss them with a view to finding remedies.

Railroads and Forest Fires

Mr. G. C. Piché, chief of the forest service of Quebec, read a paper on the "Relationship between Railroads and Forest Fires." He pointed out that the railways were still responsible for many of the fires occurring in the forests of the province. According to the reports published by the Department of the Interior, the forest fires were as follows, for the different provinces: British Columbia 10 to 20% of all fires; Ontario, 50 to 67%; Prairie Province 10 to 24%; Quebec 12 to 30%; Nova Scotia, 19 to 22%; New Brunswick 11%. Generally the greater proportion of these occurred during the construction of the line. Mr. Piché pointed out that the use of oil burning locomotives diminished, if not entirely abolished, forest fires. Railway authorities had lately greatly improved their methods of operations, but a great deal remained to be done. He hoped that the National Railways would pass under the control of the Board of Railway Commissioners, and thus lack of unity of action in the prevention of fire would disappear. He made a number of recommendations as to the prevention of fire, and on the question of clearing the right of way, advocated a clearance of fifty feet on each side. He hoped the Legislature would give power to oblige all owners of forest land, to clear each side of the right of way. He further advocated measures being taken against the accumulation of pulpwood refuse in the vicinity of a railway. Mr. Piché strongly urged the electrification of railways wherever possible, pointing out that the prevention of fires involved an enormous waste. He instanced two fires along the Transcontinental, which destroyed 150,000 cords

of pulpwood, which if transformed into paper would have yielded a product worth about \$10,000,000.

Mr. H. C. Prince, chief Forester of New Brunswick, stated that in his province there were 1094 fires in two seasons. He advocated a clean right of way, to accomplish which, constant inspection was necessary. Fire protective appliances on locomotives should also be kept in perfect condition. The C.P.R. had proved that fire protection paid.

While they appreciated the co-operation of the C.N.R. officials, yet figures and date showed conclusively that it would be in the best interests of all to have the system brought under the control of Railway Commissioners in regard to fire protection, and that they be required to maintain the same efficient fire patrols as privately-owned railroads.

Mr. Power Favors Uniform System

Mr. W. Gerard Power, president of the Canadian Lumberman's Association, did not agree with Mr. Piché's conclusions, but there were suggestions which could be followed up. There could be no question as to the great benefits which had accrued to the province, limit holders, and settlers since the fire protective system was organized,—the only system which had been effective. Personally, he was in favor of fire protection being in the hands of different associations, and not in the hands of the railways. There should, however, be a uniform system, applicable to Quebec, Ontario and New Brunswick. In Quebec, on the south shore of the St. Lawrence, the fires had been on freehold land, which were out of the control of the associations, and he suggested that legislation should be enacted by which the holders of these lands should come under the same law as the limit holders. Mr. Power then gave some figures showing the large number of fires caused by the railways in Quebec and Ontario.

Mr. A. C. McKenzie, of the C.P.R., declared that the gasoline speeder was not the panacea for all fire troubles. It was a danger to traffic, and his experience was that they could not get a speeder which would travel from 20 to 40 miles a day without breaking down. In his opinion, the territory covered by the patrol should be reduced, and the sectionmen induced to take great interest in the work.

Mr. H. Sougis said that the St. Maurice Forest Protective Association had obtained very satisfactory results with speeders on the Transcontinental.

Should Burn Debris After Cutting

Mr. E. J. Zavitz, chief forester of Ontario, insisted that locomotive inspection was of primary importance. The condition of the right of way and the territory adjacent thereto was the most serious problem of to-day. In his opinion the debris should be burned after cutting, and the distance at which debris should be burned was a matter of local conditions. He was a believer in extensive speeder

Brig.-Gen. J. B. White, Montreal,

protection. The electrification of the railways would not solve the whole problem of fire protection, as for instance, the question of slash disposal.

After a few remarks from B. M. Winegar (of the C.P.R.) and Mr. Shepard as to the effectiveness of the 50 ft. law as to right of way in the State of Maine, Mr. Clyde Leavitt, of the Conservation Commission, dealt at length with the jurisdiction of the Railway Commission in relation to patrol work. He also stated that gasoline speeders had been successful in certain parts of B. C.—in fact they were the only means that could be used for the control of fires. The success of speeders was a matter of maintenance and supervision.

In the course of further discussion, it was pointed out that satisfaction had been given by gasoline speeders, hand velocipedes, and by section hands—all depending upon local conditions.

Mr. C. T. Young, of the National Railways, pointed out the difficulty of using gasoline speeders on lines where there was dense traffic. There was less lumber in Northern Quebec than was generally thought, and therefore every means should be taken to protect the forests. He was in favor of clearing being done at least 50 feet outside the right of way.

Mr. W. F. V. Atkinson substantiated a statement that the past season in Northern Ontario had been the worst on record from the physical point of view as regards fires. As to the electrification of railways, there was abundant undeveloped water power in the districts which would be affected.

Difficult to get Work Done Well

Mr. W. R. Brown of the Brown Corporation, Quebec, in referring to the question of top lopping, stated that his company gave the jobbers 50c. per 1,000 feet for this work. The great difficulty, however, was to get the jobbers to do this work efficiently. Last summer some representatives went into the forests to see if the limbs and tops had been destroyed. They found that after seven years there were still many limbs left on the ground. In New Hampshire the burden of proof as to fires was put on the railways, and the result was that the number of fires had greatly diminished. This, in his view, was the fundamental point in the situation. The railroads in New Hampshire also run two furrows outside the 50 ft. strip, thus preventing grass fires.

Results of Slash Burning Experiments

Mr. J. D. Brule, of the Southern St. Lawrence Forest Protective Association, gave the results of experiments made in burning slash during six days on the timber limits owned by the John Fenderson Co., Inc., of Sayabec. These were made in November last. Three men were engaged in the brush burning work; they tried to follow up the logging crew, but failed to do so, although they tried to their utmost. As soon as the trees were felled, the lopping was done, and a fire built. The experiments were confined to areas on which trees were cut for lumber purposes. The cost of operation would vary according to the composition of the forest and the degree of natural lopping of the trees to be dealt with. The brush burning in the logging slash would relatively be more costly per 1,000 ft. than in pulpwood slash in similar circumstances. The figures were based on a salary of \$2.00 per man and boarding of 75 c. per day per man. The average cost for the six days was \$3.32 per 1,000 ft. B. M.; the average cost for fir and spruce slash \$2.73 per 1,000 ft.; and the average cost for cedar slash \$4.50 per 1,000 ft. He was sure there were not many lumbermen that would be ready to raise an increase of \$2.50 per 1,000 ft. in actual lumbering operations for brush burning. Speaking for his own action, lumbermen would have to increase the personnel of each logging crew by three, and at that rate lumber operators would not attempt to do the work unless the Provincial Government helped to meet the expense incurred.

Mr. R. Lyons of the Laurentide Co. read a short paper describing experiments on brush burning by working two cutting crews together with two additional men for burning the brush. The men took the branches as they were cut, and placed them on the fire. He stated that there was a difficulty in getting men to do the work. The cost of brush disposal was \$15.64. The work was done on fifteen acres containing 84,775 B. M., and the cost was \$1.92 and \$2.18 per 1,000 ft.

Gen. J. B. White, of the Riordon Pulp and Paper Company, stated that his company had carried out experiments on sixty-six acres, but owing to loss of time by weather, the cost was at least double that given by Mr. Brule. While experiments should be carried on, he was of the opinion that with the high labor costs and the present labor situation, lumbermen could not afford to carry on such operations.

Refuse Left in East is Small

Mr. Angus McLean, of the Bathurst Lumber Company, drew attention to the large number of trees, especially balsam, which were blown down in the woods in the natural order of things. He did

not see why lumbermen should be expected to burn this slash, having regard to the high cost. In New Brunswick, the refuse left was very small. Lumbermen were anxious to get as much serviceable wood as possible out of the forest, and owners of pulpwood limits left very little in the woods that was of value.

Mr. M. T. Small, of the Laurentide Company, said that so far as he could judge, the cost of burning slash was too high for lumbermen to undertake the operation.

Mr. J. H. Bothwell, of the Brampton Pulp and Paper Company, emphasized the point raised by Mr. Angus McLean. He said that the trees, especially balsam, blown down, were a greater menace than the slash.

Mr. W. Gerard Power agreed on this point. He said that the debris left on their limits did not amount to anything. He could not see how they could go on record at this stage as to any policy regarding slash burning. He thought that they should continue the experiments already begun.

Place Road Under Board's Direction

The following resolution was adopted:

1st. That delegates be appointed from the Province of Quebec to accompany those from the Provinces of Ontario and New Brunswick, who will place before the Federal Government the desirability and urgent necessity of placing under the jurisdiction of the Board of Railway Commissioners those railroads which are not now subject to that commission with regard to forest protection.

2nd. That copy of this resolution be forwarded to the Governments of the Province of Quebec, Ontario and New Brunswick, as well as to the Canadian Lumbermen's Association, accompanied by a request that they give their support to the said resolution.

3rd. That the Government of the Province of Quebec be petitioned to place all owners of private forest lands amenable to the obligations and penalties contained in Clause 1651 of the Revised Statutes of the Province of Quebec, which now are only applicable to the owners of lands under license.

Joint Meeting on Second Day

On the second day, under the auspices of the Woodlands section of the Canadian Pulp and Paper Association, the joint committee of the Quebec Limit Holders' Association and the Woodlands section brought up the following report, which was the outcome of the summer meeting of the section and meetings in Quebec with the representatives of the Quebec Government:

1st. That the suggestion of having a committee to consult with the Hon. Minister of Lands and Forests, Quebec, is approved of, and we recommend that such committee shall consist of the members of the executive committee of the Province of Quebec Limit Holders Association, to confer with the Minister on all matters relating to lands held under license from the Province of Quebec.

2nd. That experiments be made in clean-cutting at the option of the limit holder in conjunction with the Government Forest service.

The sample plots on which these experiments are made to remain a distinct forest reserve for a sufficient length of time to permit of the results being studied.

3rd. Operating companies to forward applications for inspections which they wish made by the Forestry Service of their territories 6 months before beginning operations.

4th. In order to increase the output all operators should utilize and remove all diseased, lodged, blown down, or burnt trees and tops in their cutting areas if of a commercial value to the operator.

5th. That the personnel of the Forestry service be increased and larger cash appropriations be made.

6th. That operators be advised that there are forestry engineers, graduates of the Quebec Forestry school, who might be available where their services are required.

7th. Any limit holder wishing to reforest any part of the territory he holds under license to cut from the Province of Quebec shall furnish a plan showing location of track to be reforested, and a programme of reforesting these same to be studied and reported on by the forestry service.

The Government to furnish the necessary stock free.

The limit holder to plant the stock in co-operation with the forestry service.

The expenditure to be reimbursed by the Government

deducting the amount from the limitholders stumpage account for the current year.

The lands so reforested to continue to form part of the license.

On the motion of Mr. Dan. McLachlin, or Arnprior, the report was adopted.

Would Double the Field Parties

At the afternoon session, a resolution was passed expressing the appreciation of the work of the Dominion Entomological branch of the Department of Agriculture, particularly the forest insect section under Dr. Swaine, and asking that sufficient funds be placed at the disposal of this department to, at least, double the number of field parties in 1920.

A further resolution passed was to the effect that in view of the large number of fires caused by coal-burning locomotives passing through forest areas, and the great losses resulting therefrom, the meeting recommended that such railways be electrified where water-falls in the forest areas are ample to supply the necessary power.

A long discussion on the questions of artificial and natural re-seeding and the driving of hardwoods followed. In reference to the former subject, Mr. C. T. Young pointed out that it was impossible for lumbermen to artificially replant on a commercial basis. Dr. Howe supported this, while Dr. Swaine spoke of some splendid trees grown from natural re-seeding he had seen on the limits of the River Ouelle Pulp and Lumber Company.

Mr. Clyde Leavitt raised the question of using hardwoods for pulp, and the possibility of driving these hardwoods. The pulp companies, he said, were not taking out all the merchantable balsam available. Mr. C. T. Young stated that he had driven peeled hardwoods, but found that the trees could be driven in the spring, but sank in June and July. Mr. Brown said that the Brown Corporation had tried to drive hardwoods, but found that it was practically impossible. They had tried boring the ends and putting in paper and tin containers, but they lost a large percentage of the lumber.

Mr. Piche gave some details of the work of the Quebec Government nurseries, stating that next year they hoped to have five millions of trees available, and to reduce the cost to \$1½ per 1,000.

Ravages of Spruce Bud Worm

Dr. J. M. Swaine gave some details of the spruce bud worm attacks in the Province of Quebec. He stated that the occurrence of the disease was now merely local. There was really no means of controlling the attack, because of its general character. The worst of the attack on the balsam was past, and he believed that the remaining trees would recover. In some districts 100 per cent. of the trees had been killed, in others 50 per cent., and in others, 25 per cent. They were endeavoring to get information on obscure points of the disease. If lumbermen would increase the percentage of spruce-balsam stands they would greatly decrease the chances of disease, as the attack on balsam was smaller where 50 per cent. of the stand was spruce. He recommended that balsam slash should be burned as a preventative against future attacks. It was intended to send seven parties into New Brunswick to study the spruce bud worm problem.

Dr. Howe urged the necessity of a general survey in Eastern Canada of burnt-over and cut-over lands, of trees of 4 in. diameter and over. This would enable a prediction to be made of the period of the next crop. While the pulp and lumber companies had already co-operated in the work of the Commission of Conservation, yet more co-operation was essential. They were endeavoring to find out why spruce was disappearing from the stands of mixed hard and soft woods. The Bathurst and Laurentide Companies had agreed to co-operate on experimental work in cutting on a fairly large scale. In a few years there would be a great scarcity of pulpwood, and it was therefore time to plant for the future if there was to be a continuous supply of new material.

Importance of Adequate Surveys

On the motion of Mr. McLachlin, the following motion was passed:

Whereas, it is manifestly to the interest of Canada as a whole, and of the wood-using industries in particular, that the fullest possible information be made available as to the character and extent of the forest resources of the Dominion, and as to the conditions which govern the reproduction and growth of the commercially valuable tree species, be it resolved that this meeting endorse the work along these lines already under way by the Commission of Conservation, with particular reference to the survey of the forest resources of the several provinces, in co-operation with the Provincial Governments, and the investigation of the conditions of growth and reproduction of pulpwood species, in co-operation with pulp and paper companies, the Dominion Forestry

Branch and the provincial Forest services; and recommend to the Dominion Government that financial provision be made for the continuation of these projects on a more adequate scale.

Following this, Mr. Arthur H. Graham, of the Ottawa River Forest Protective Association, and an aviator, read a paper on aerial photography, prepared by Mr. Ellwood Wilson, of the Laurentide Co., Ltd. This gave a brief resume of the negotiations which led to the loan by the Federal Government to the St. Maurice Valley Fire Protective Association of two seaplanes.

The service was started in June of last year. Up to that date 78 per cent. of the season's fires had already occurred, and only four fires occurred thereafter, and of these one was discovered and reported by the planes. Two others were also discovered and enquiries made. Fires could be distinguished at 40 miles, and a safe estimate of the area of visibility was a radius of 20 miles. It was possible to transport in these machines a Johnson fire pump and 1,500 feet of one and a half inch hose, so that such equipment could always be landed within two or three miles of the scene of any fire occurring within the area of the patrol district. The machines used were Curtis flying boats, type HS 2 L, weight about 3½ tons. Owing to the impossibility of making artificial landing fields, and the absence of natural ones, the land plane was out of the question in Canada, but the great number of lakes and navigable rivers made the seaplane the ideal plane, the only drawback being the cost of fuel and upkeep. During the season these two machines had flown 1,500 miles, and made 400 miles of reconnaissance.

More Useful than Land Photography

Mr. Wilson's paper described experiences in aerial photography and showed why these were more useful than land photography. "It is possible," he said, "for a forester to get a better idea of 50 square miles of unknown territory in two hours' flying than he could in two weeks on the ground floor. Until one has flown one can have no idea of how much valuable information can be gained from the air. It is like having a colored relief map spread out below for study." It was further stated that pictures were taken at altitudes of 1,000 to 5,000 feet, the best results for all-round forest work being obtained at a height of 5,000 feet, which gave a scale of approximately 400 feet to one inch. Such photographs were far superior in detail and in accuracy to ground-work photography. The paper also gave some descriptions as to how the different kinds of trees, roads, portages, camp dams, booms and logs in rivers could be clearly distinguished, and this information was illustrated by lantern slides.

As to the cost it was stated that complete photographic maps could be turned out at a cost not exceeding \$25 per square mile. Mr. Graham added his own estimate as being slightly under \$6 for a map of 400 feet to one-inch scale.

Election of Officers

The election of officers resulted as follows:

Chairman—Brig. General J. B. White, Riordon Pulp and Paper Company, Montreal.

Vice-chairman—Mr. S. H. deCarteret, Brown Corporation, Quebec.

Council—Messrs. Frank I. Ritchie, Wayagamack Pulp and Paper Company, Three Rivers; Ellwood Wilson, Laurentide Company, Grand Mere, Quebec; and T. F. Kenny, James MacLaren and Company, Buckingham, P. Q.

Mountain Lumber Manufacturers Meet

Lumber manufacturers of the mountain region of British Columbia entered a strong defence against charges of profiteering at the annual meeting of the Mountain Lumber Manufacturers' Association, held recently in Calgary. Besides electing officers for the year, the lumbermen discussed the price situation, labor conditions, which are extremely difficult at present, and mounting costs of production.

Officers elected include:

E. L. Staples, Wycliffe, B.C., president; A. K. Leitch, Jaffray, B.C., vice-president; executive committee—president, vice-president, and the following—J. S. Deschamps, Rossland; H. C. Meeker, Merritt, B. C.; B. H. Ross, Waldo, B. C., and H. B. Cornell, Golden, B.C.

Co-ordinating Work in Forest Research

The Society of Forestry Engineers held a meeting at the Windsor Hotel, Montreal, on the night of January 28th, when the members discussed the question of the diameter method of regulating the cut and the utilization of hard woods in mixed forests. It was decided to appoint a committee to co-ordinate the work of the various organizations in forest research, Dr. Howe, of the Conservation Commission, being appointed chairman of the committee.

Toronto Firm Adopts New Idea in Service

Capt. Hunter Pannill, Toronto

Specialization is the watchword of modern business enterprises and is being developed in the wood products line more and more with the idea of rendering better and more efficient service. A distinct step has been taken in this direction by the Pannill Door Company, who are located at 131 Front St. East, Toronto, and report a remarkably brisk demand for their stock. The company do both a wholesale and retail business and handle nothing but doors. Their business in this respect is unique. The present demand is a strong indication that the coming season will be a brisk one in the building arena. The company carry a stock of several thousand doors in all sizes, in plain and quarter cut white oak, red oak and birch and solid white pine, featuring the Korelock and Klimax line, one of their leaders

being a three-ply panel birch with softwood stiles and rails. They furnish hotels, hospitals and other larger buildings as well as contractors, builders and private individuals. Prices are steadily going up owing to the advance in materials and the active requisition from many quarters.

The head of the company is Captain Hunter Pannill, who, previous to enlisting for overseas service, was on the staff of the Northern Aluminum Co., Limited, Toronto. He had some thrilling experiences during the European hostilities and returned to Canada two inches shorter in stature than when he went away, as the result of a narrow escape from death when in the Royal Air Force. Captain Pannill crossed the ocean with the 38th Battalion of Ottawa, and in the latter part of 1915 got into the fighting game in France. He took part in all the big events and escaped unscathed until the battle of Vimy Ridge. There, shot in the arm and suffering, he was sent back to London, where he spent some months in the hospitals. For gallantly on the field he was awarded the Military Cross. After his recovery he joined the Royal Air Force and qualified as an observer. When engaged in offensive patrol against the enemy his plane was shot down, while aviating about eight thousand feet above the earth, by a German anti-air kraft gun. An explosive shell badly shattered the tail of his machine in September, 1917. The pilot had both legs broken while Captain Pannill fared even worse for both of his lower limbs were fractured above the knee, the right one in four places and the left in two places. He spent nearly a year in the hospitals recovering from the effects, and returned to Canada in August of 1918. A few months ago he formed the Pannill Door Co.

Indirectly associated with Capt. Pannill is Major E. I. Harrington, who before the war was possibly one of the best known door and sash men in Canada. He has spent practically his whole life dealing in doors and sash in one manner or the other, and is now connected with the largest door and sash concern on the Continent, having again taken up his work upon his return from overseas. Major Harrington states that his military career when compared to Capt. Pannill's, sinks into insignificance, though his friends are quite certain that an interesting story could be told.

Such an organization as the Pannill Door Co., specializing in an item so important to builders and door buyers, will no doubt be welcomed and well supported by all interested in doors. The success of the Company in the last six months, (being also the first six months) shows two things quite distinctively, viz., the returned man can come back, and specializing is the thing to-day.

Yates Company Will Build Iron Foundry

Industrial development of Beloit, Wis., took another big jump recently with the announcement of officials of the P. B. Yates Machine company that that factory will start construction early this spring of a half-million-dollar iron foundry.

The new foundry will be located on Fourth street, beginning at Roosevelt Avenue and extending north 206 feet. It will extend clear through the block to Third street, giving the new building frontage of 264 feet on Roosevelt Avenue and a total floor space of 54,384 square feet.

The building will be constructed of brick, steel and reinforced concrete. It will contain the latest and most efficient foundry equipment that is possible to buy. Plans for the big factory improvement

are already in the hands of architects. Contracts for the work will be let within a short time and work on it will begin at the earliest possible date in the spring. Plans provide that the building must be ready for occupancy before next fall.

The rapid growth of business due to unprecedented demands for wood-working machinery on the part of manufacturers both at home and abroad is given as the reason for the enlargement of the Yates plant.

Toronto Capitalists Buy Pulp Plant

Lester W. David, the Seattle lumberman who for many years has been a prominent figure in British Columbia timber affairs, announced that on behalf of the bondholders of the Rainy River Pulp and Paper Company he had sold the plant at Port Mellon to E. M. Davis and a group of Toronto men, who will commence active operations within three months. It is stated that sufficient financial backing is behind the new owners to warrant big operations at the plant, which has been idle for a considerable period.

The Toronto people have already bought 20,000 acres of Crown grant timber and coal lands near Port McNeill on Vancouver Island, where 550,000,000 feet of timber have been cruised. The new concern have the water rights on the Rainy River, and it is stated they will operate the mill by water power. The plant as at present constituted has a capacity of twenty tons of sulphate or kraft pulp per day, but this will be increased later to double that amount by the installation of additional machinery.

Important Timber Deal Transacted

An important timber deal has just been completed in the East Kootenay whereby the East Kootenay Lumber Company, Ltd., has sold portions of its extensive holdings to the Crow's Nest Pass Lumber Company, Ltd., and to the eastern directors of that company who will incorporate as a separate company. The holdings sold consist of 10,000 acres of land and timber, and from 15,000 to 20,000 acres of timber in some five blocks, adjacent to Cranbrook, Ft. Steele, Bull River, and Moyie, and the consideration is between \$250,000 and \$500,000.

The eastern capitalists referred to, who are applying for incorporation, will start a new industry in the Cranbrook district that will mean an investment of at least \$1,000,000.

It is expected that the portion of the holdings acquired by the Crow's Nest Pass Lumber company will be developed in connection with that company's big plant at Wardner.

The East Kootenay Lumber company still retains very extensive holdings and will carry on its lumber manufacturing industry at Jaffray as heretofore.

Much Demand for Labor in Bush

Enquiry at the Government inquiry Bureau, Ottawa elicited the information that the demand for unskilled laborers in the bush still continues, with approximately 2,500 openings for men in this class of work. Great difficulty is experienced by the Bureau staff in securing men for this work as applicants either have no experience or are not desirous of leaving the city. There is also a small but steady demand for farm laborers, but at present the Bureau has not had any trouble in filling it, as the call for this class of labor rarely exceeds greatly the available supply. In other classes of skilled and unskilled labor there is scarcely any demand.

You Can Be a Business Builder

Business building consists of making every person who enters your yard a repeater and a booster who will bring in more customers to buy your goods.

Forget the mere object of one sale. Treat your customer as you would like to be treated yourself. Never sell him anything he doesn't want, or anything that he is apt to be dissatisfied with—merely to make the sale. Complete satisfaction on the part of your customers is your only key to success. If you had to depend upon first sales entirely, you would have a sheriff's sign on your door within six months.

Never misrepresent. The goods you sell will surely speak for themselves in use, and if they tell a different story from yours, you are very apt to lose a customer.

Satisfy your customer by the goods you sell him, by the appearance of your yard, by the treatment he receives in your place of business, and he'll stay satisfied and will surely come back.

Boom and Improvement Companies

Representative Lumbermen's Associations Meet in Toronto
and Elect Officers for Coming Year

The annual meetings of the various Boom and Improvement Companies operated by the lumbermen of the Georgian Bay district, were held at the Queen's Hotel, Toronto, on January 22nd and 23rd. There was a representative attendance from various parts of the district, and the business of each company was quickly disposed of. Owing to high wages, the inefficiency of men as well as the scarcity of help at some points, operating expenses were heavy during the past season, but all the streams are reported to be in good condition, and various improvements were outlined in driving and rafting.

The Log Picking Association, which operates on Georgian Bay, in the matter of the recovery of logs lost in the operation of towing rafts, etc., elected the following committee to look after its affairs for 1920: W. J. Sheppard, Georgian Bay Lumber Co., Waubaushene; F. N. Waldie, Victoria Harbor Lumber Co., Toronto; W. E. Bigwood, Graves, Bigwood & Co., Byng Inlet; E. Letherby, Chew Bros., Limited, Midland; C. N. Carney, Hope Lumber Co., Thessalon; W. J. Bell, Spanish Mills Co., Sudbury; J. J. McFadden, McFadden and Malloy, Spragge; A. E. Beck, C. Beck Manufacturing Co., Penetanguishene; H. H. Bishop, Bishop Lumber Co., Nesterville; W. F. Beck, C. Beck Manufacturing Co., Penetanguishene.

The Spanish River Improvement Co., Limited, elected the following officers for 1920: President, W. E. Bigwood; vice-president, George R. Gray, Spanish River Pulp and Paper Mills, Sault Ste. Marie; Secy.-Treas., Charles McCrea, M. L. A., Sudbury. The directors are W. J. Bell, J. J. McFadden and F. N. Waldie.

The Sable & Spanish Boom and Slide Co. of Algoma, Limited, which handle the logs out of the Spanish river, elected W. E. Big-

wood, President, and W. J. Bell as Secretary-Treasurer. Directors, J. A. Ferguson, Spanish Mills Co., Massey. W. J. Bell, J. J. McFadden and F. N. Waldie.

The French River Boom Co., which handle all the logs of the various owners coming down the French river to Georgian Bay, elected W. J. Sheppard of the Georgian Bay Lumber Co., Waubaushene, as President, and W. F. Beck, of the C. Beck Manufacturing Co., Penetanguishene, as Secretary-Treasurer. The directors for the coming year are F. N. Waldie, of the Victoria Harbor Lumber Co., Wm. Irwin, Peterborough; W. E. Bigwood, Graves, Bigwood & Co., Byng Inlet; and W. J. Bell, Spanish Mills Co., Sudbury.

The Mississauga River Improvement Co., Limited, which handles the logs coming down the stream which bears this name and looks after all improvements, elected J. J. McFadden of McFadden & Malloy, Spragge, and F. N. Waldie of the Victoria Harbor Lumber Co., as Sec.-Treas. The directors are C. N. Carney of the Hope Lumber Co., Thessalon; John Malloy, Spragge and W. E. Bigwood.

New Hardwood Industry in the East

A new company is being formed for the manufacture of hardwood lumber and last blocks at Cross Creek, N. B., and when completed the industry will be one of the largest of its kind. H. W. Mobbs, President of Mobbs and Lewis, Limited, Kettering, Eng., manufacturers of last blocks and shoe machinery, is the man behind the gun enterprise. R. W. Baird is the manager of the new firm. Mr. Baird was in France for two years with the C. F. C. Going over as a private he won a commission while abroad. A month after his return from overseas Mr. Mobbs came out to Canada and together with Mr. Baird, visited many points in Canada from Sault Ste. Marie to the East Coast in search of a suitable location and finally selected upon Cross Creek, N. B.

W. F. Beck, Penetanguishene,
Secy.-Treas. French River Boom Co.

Ed. Letherby, Midland,
Member of Log Picking Asso. Committee

Geo. R. Gray, Sault Ste. Marie, Ont.,
Vice-Pres. Spanish River Improvement Co.

John R. Stover, Blind River,
Retiring President Mississauga River
Improvement Co.

Forest Fires Have Raged in Alberta

Carelessness is Blamed for Majority of Them—Good Protection Work of the Forestry Branch

While forest fire losses in Alberta last year aggregate \$2,250,000, they would have been far greater but for the Dominion Forestry Branch and its officials and employees.

The last big fire previously occurred in 1910, when much more damage was done for the reason that there was no preventive nor fire fighting service. In that year the fires swept from below the international boundary far into the north along practically the entire slope of the Eastern Rockies. As there was no regular organization to combat the flames, the sporadic efforts of the settlers were almost useless. Two years later when the Forestry Branch had been established a different system prevailed and since then until 1919, forest fires' damage was comparatively light. In 1918, for instance, it was only \$1,000 in the Alberta reserves.

Last year conditions were altogether against the fire fighting and preventive forces. The long drought left the woods dry as tinder, and high winds, which persisted for weeks at a stretch, fanned the flames beyond control. It was the experience in every instance that the forestry department officials and employees were on the ground of a fire within a few hours, usually less than four, of the time it was reported, and often they would not get away for days so bitter was the struggle.

Five hundred and forty-eight thousand acres were swept over and the loss in merchantable timber has been estimated officially as being \$500,000. Young timber was damaged to the extent of \$1,370,000, and other growth \$400,000.

The causes of the fires were given as follows: Camp fires, 7; lightning, 4; hunters, 3; railways, 12; tourists, 1; logging mills, 2; unknown, 16.

So complete is the information bureau throughout the forest reserves now that within a few hours, by means of the Government forestry telephones and other communication systems, word can be got through to headquarters in Calgary and measures taken to meet the situation.

Prior to 1913 such facilities were absent and a fire simply burned itself out.

Carelessness is blamed for about 95 per cent of the fires. For example in 1910, a surveyor's assistant lit a smudge to discourage mosquitoes and millions of dollars of damage resulted. The youth was fined \$10 by a magistrate and "severely reprimanded."

It may be worth while to record that burned over timber does not lose all its commercial value. A good deal of that burned over in 1910 is still being sold to mine operators for timber purposes. It is well cured naturally in the dry climate, it does not check and it lends itself readily to the uses in mines for which it is acquired. Some timber that was burned over thirty years ago was recently disposed of by the Federal Government's representatives in Alberta.

The burned over timber can also be used for ties and ice posts.

In connection with the information service, it is stated that arrangements are being made for aerial fire patrols which will, of course, speed up the system of communication and probably save immense amounts by permitting combative measures before fires get beyond control.

May Prohibit Export of Pulpwood

Sir Lomer Guoin, at the annual dinner of the Canadian Pulp and Paper Association, made an important announcement as to the policy of the Quebec Government regarding the exportation of pulpwood. The recent agitation on the part of certain American pulp and paper companies in favor of the lifting of the ban on the exportation of pulpwood cut from Crown lands has received a very definite answer, and one which puts an end to any hope that the agitation would succeed. Sir Lomer also gave a very strong hint that it may be necessary to forbid the exportation of pulpwood from private lands, owing to the increasing home demands.

Canada has built up her enormous pulp and paper industry on the lines of the law forbidding the exportation of pulpwood from Crown lands, which has compelled American companies to build plants on this side of the border in order to secure the necessary raw materials. We cannot afford to jeopardize that industry, and that the present policy is not to be relaxed, but rather tightened, may be gathered from the following statement by the Premier: "I know that you require, and are actually taking, vast quantities of pulpwood to feed your mills, but at the same time I know that you are interested in the future of your timber holdings. I do not want to pose as a prophet, but it seems to me that the future of this province is connected with the building up of pulp and paper plants. Our province was the first to realize the importance of keeping our raw material for the use of our mills. We do not intend to relax that policy. We may have to go further. The time may come

when we will have to limit the cut of our Quebec forests for the exclusive use of Quebec men. If the situation demanded, we shall not hesitate to take the necessary measure, because we cannot forget that charity begins at home."

Sir Lomer takes the view that the stocks of lumber and pulpwood are not inexhaustible, and that reforestation is inevitable if we are to maintain our supplies—a policy in which the Government is willing to co-operate. Besides this, the information concerning our forest resources is incomplete, and for this reason, it is intended to make an inventory, for which purpose three posts will be established at Hamilton Inlet, Ungava Bay and James Bay, from which investigations will be made and airplanes will be used if necessary. These stations will be connected by wireless.

It is generally admitted that the Quebec Government has been very helpful in co-operating with lumbermen and pulp and paper companies, and Sir Lomer's speech is a guarantee that this policy is to be continued.

Higher Position For Mr. J. S. Cook

Mr. J. Stanley Cook, the assistant secretary of the Montreal Board of Trade and the secretary of the Montreal Lumber Association, has been appointed secretary of the Board of Trade, in succession to Mr. George Hadrill, who retires after forty-three years' ser-

J. Stanley Cook, Montreal

vice. Mr. H. C. Beatty, the senior clerk, has been appointed assistant secretary of the Board of Trade and secretary of the Montreal Lumber Association. Mr. Beatty has seen considerable service overseas, giving up his course of law studies at McGill in order to serve with the forces. He joined the staff of the Board of Trade about six months ago.

Return to Price Stabilization Plan

Market conditions at the moment are very similar to what they were early in July of last year, when we were having a runaway market, and at that time we expressed our conviction that it would be much better for the trade in general if prices were more stable. write the Long-Bell Lumber Co. of Kansas City, Mo.

To that end this Company advised the trade on July 7th that our prices, effective that date on Southern Pine yard stock, would remain the same until Aug. 15th. On Aug. 15th, and again on Sept. 15th, we issued price lists which were effective for a thirty-day period, and on Oct. 15th, the market being fairly stable, we discontinued our guaranteed price policy.

We have every reason to believe that our effort to stabilize prices was successful to a certain degree, and performed a real service to the industry as a whole, although at a very large cost to ourselves, as it resulted in our selling large quantities of lumber much less than the market price during the time when these guaranteed prices were in effect.

After giving the subject careful consideration, we have decided that the price file we are to-day issuing is the maximum price we will charge for any item of southern pine yard stock which our mills can produce and have in shipping condition, and can reasonably expect to ship within thirty days from date of orders. This price to be in effect until March 1st, at least. No one can foretell what market and what manufacturing conditions will be after March 1st, but it shall be our policy to endeavor to protect our trade by stabilizing prices on southern pine.

Demand for B.C. Stocks Was Never So Keen

Speaking generally of lumber and operating conditions at the Coast, a leading representative of the industry, writing to a member of the trade in the East says:

"There does not seem to be any limit to the prices one is able to secure from the American trade. Our hardest task now is to keep away from taking orders instead of selling them. We are quite convinced that if we so desired, we could go out on the market to-day and sell our stock four or five times over, and it would not take very long to do it at that.

"The log situation is extremely bad. According to the government scaler, there was 61 million feet of logs on Burrard Inlet and the Fraser River available the first of January. Since that time this amount has been reduced considerably. All the mills are running, and there has been very few logs put in.

"To show you what the employers are up against in the way of labor, the following is a pretty good illustration. One of our Buckers at the camp was quitting one half hour earlier than the rest, and leaving camp one half hour later to go to work. He was doing this in the Company's time, as he claimed that the time consumed in walking into the bush should be paid for by the Company. He was warned several times and then laid off. The rest of the employees said that unless we fired the foreman and took this man back, they would all quit. They were told that he would not be taken back, and they walked out on us. We feel inclined to think that this Summer is going to be a repetition of last, and possibly a little worse in the matter of employing men in the bush. They are very touchy and strike on any lame excuse they can work up.

"We have logs ahead and but few of the other mills have. This same condition exists over in Washington and Oregon, and we are quite sure the majority of the mills will be closed down this summer for lack of logs.

"The car situation has eased up considerably lately, and we have been able to make a few shipments. However, we have had some very soft weather in the Mountains and it has caused numerous slides which has again delayed cars coming into this territory. We hope in another week or ten days to be in a better position and will be making more shipments."

Mr. Young Strongly Urges Reforestation

At the recent convention of the Northern Ontario Development Association held at North Bay it was decided that the organization should become a permanent one.

A resolution in favor of reforestation was carried. The mover of this resolution, Cyril T. Young, of Toronto manager of the Eastern Lands Department of the Canadian National Railways, said that the supply of railway tie timber east of the Rocky Mountains would not last more than fifteen years longer, and the pulp supply would last little longer than the railway tie timber. He suggested reforestation should not be left entirely to the Crown, but private interests should co-operate and do their share.

Sir Henry Egan Resigns as Chairman

Sir Henry K. Egan, has resigned as chairman of the Ottawa Improvement Commission and also as a member of that body of which he has ably directed the work and administration in the Capital city for some years. It is announced that Sir Henry is relinquishing these duties and is also giving up a number of public and private activities. Sir Henry has long been one of the outstanding figures in the lumber areas of the Ottawa Valley. He was born in Aylmer, Que., in 1848 and for years has been managing director of the Hawkesbury Lumber Co., purchasing, along with others, the Hawkesbury lumber mills and limits from Hamilton Bros. in 1888. He has been a director of many companies, a life director of the Carleton Protestant Hospital, a governor of St. Luke's Hospital, a life director of the Old Men's Home, the Ottawa Country Club and Ottawa Golf Club. He was one of the promoters of the Ottawa and Montreal Power Transmission Co.

Northern Camps Terrorized by Agitators

A recent despatch from Fort William, Ont., says: Presumably agitated by a number of Finn lumberjacks in J. A. Stewarts tie camps at Ignace and Shebaqua, tie cutting operations were practically at a standstill for several days.

The woods have been plastered with O. B. U. literature with inscriptions such as "Join the O. B. U." "Why? to dictate to your officials and not to be dictated to, when you finally decide to act."

At Ignace a manifesto drawn up, "The Camp Committee," demanded, among other things, the serving of afternoon tea and a morning luncheon. Armed with revolvers the Finns compelled all

workers to leave camp and came to Port Arthur and demanded their pay, which was refused.

With them came several men who had been forced to leave work, so it is alleged, by intimidation, some of them at the point of revolvers. Considerable gun-play was used and the camps were "shot-up" several times, but no casualties have been reported.

According to a large employer of labor here, there is more in the movement than a local labor revolt. It is claimed that the rising is part of a big conspiracy on part of the O. B. U., to prevent production in woods in order to stop delivery of ties to the railroads.

Lumbermen Representatives Were Elected

In the recent elections of the Board of Trade Toronto, the nominees of the Lumbermen's Section were successful. The Lumbermen's Section is one of the most influential and active in the organization, and at the annual meeting nominated Hugh Munro, 69 South Drive, who is well and worthily known in the industry,

Hugh Munro, Toronto

Sam McBride, Toronto

as a member of the Council of the Board of Trade for 1920, in succession to C. W. Wilkinson of the Union Lumber Co., who served last year.

Ex Controller Sam. McBride, wholesale lumberman, was nominated as one of the representatives of the Board of the Canadian National Exhibition Association.

It is pleasing to state that Mr. Munro and McBride were elected and in the contest stood high in the results. There is no doubt that Mr. Munro, who has been in the lumber business for many years and enjoys the confidence and esteem of the trade, will make an admirable representative on the Council, on which he served for two terms some years ago. He has the necessary business experience, insight and general qualifications to render efficient service.

Mr. McBride is too well known in the municipal arena to need any extended reference. He has plenty of force and energy and will see that the lumbermen's interests are not lost sight of on such an important body as the Canadian National Exhibition Association.

Fireproof Timber Process Patented by British Firm

A process has been made public in England by which timber is made fireproof. A company has been formed, known as the Timber Fireproofing Company, which claims that the use of the process will tend to avoid the risk of fire in houses built of wood.

The process known as the oxylene fireproofing process consists of submitting the wood in a closed cylinder to a steaming and vacuum treatment, which removes the air moisture in the pores of the wood and vaporizes the sap water. The wood is then impregnated under hydraulic pressure with a solution of fire-resisting chemicals, which replace the elements driven out by the preliminary treatment. Finally the water of the solution is dried off, and the chemicals in minute crystal form remain embodied in the fibres.

The effect of this treatment is explained as being that on the application of heat the crystals expand and form a glossy coating, which excludes the oxygen of the air and prevents its combination with wood, thus rendering flame an impossibility. The higher the temperature, the more the crystals expand, and though in time the chemical action of each crystal becomes exhausted and the wood becomes charred fresh crystals come into play, and though the wood may eventually be charred completely through, no flame will be generated.

Putting It Up Point Blank

Geo. Wilson-Jones, Secretary of the Illinois Lumber and Builders' Supply Association, has a knack of saying the right thing at the right time in a manner so striking as to drive home everything he wants to impress upon his hearers or readers. His latest is a letter sent to the dealers in his State at the beginning of the year, in which he says:

"In starting the New Year, I urge a greater degree of energy in association work. Too much of the burden falls on too small a number of members. I also want to make to you a sort of 'Declaration of Principles' and embody same herewith. If you are now a member, let this communication spur you to increased interest in your association. If you are not a member, let this communication lead you to make it your association. The association is not my private business. You lumbermen are the Association. I am your clerk, employee, assistant, or whatever you choose to call me, but most emphatically I am not the association. The association is what you make it. I carry out your orders. Therefore, don't hesitate to give me your orders. Kindly do me the courtesy to read every word herein and let me hear from you regarding the principles expressed and the policy outlined. I must not only work for you, but also must work with you, and most earnestly ask your co-operation, support, backing, direction and suggestions.

"Start the new year with membership paid on the dot.

"Give me 100% co-operation and support and I will produce the results.

"A half-starved association can't do normal work any more than a half-starved body.

"The secretary ought to spend very little time collecting money to meet expenses.

"The association has grown in activity and influence—it must not fall back.

"If the member knew the importance of the organization as the secretary has it brought to his attention each day, he would not hesitate about sending his dues; in fact he would insist on paying double.

"A thing worth doing at all is worth doing well.' This adage

applies to the association just as much as to our individual lives.

"The member should consider his association dues as much a part of his business as salary, cartage, insurance, taxes, and other overhead expenses.

"When the member realizes it is his association and not the private business of the secretary, there is no lack of interest.

"The best member is the member who kicks. A kick indicates interest. The secretary profits more by kicks than commendation, for a kick points out the way for an improvement.

"The poorest type of member is the one who pays his dues then forgets his obligation to his fellow members.

"The member should make it his special duty to see to it that there are no non-members in his vicinity.

"The non-member is dragging his feet and slowing up the progress of the association. The member serves the non-member, himself and his fellow members by securing said non-member's membership.

"Each new member adds to the financial strength, enhances the influence, increases the importance, puts more punch into the work, and assists materially in getting results.

"No other investment a dealer makes pays such big dividends as association membership.

"Ask the non-member if he would welcome the disbanding of the association. Put it up to him that his non-membership is interpreted by hostile influences as a vote for disbandment.

"Give the association 100% membership, ample financial backing, necessary clerical help, and the results will astonish the most skeptical.

"Treat your association as you treat your business and you will get the same results.

"No man leaves his business to a hired employee. Why then leave the association entirely to the secretary?

"Your employee respects you in proportion to your own activity as the proprietor. Your association secretary regards the association in the same way. Give the secretary a bunch of lively members, and he will hustle his head off to keep up the pace they set.

"Without thorough organization we get only what is left over. With thorough organization, we get what we are entitled to."

Does Advertising Pay?

The skilful advertiser devises means of keeping close tab on the results obtained from his advertising investment. He must know, first, the number of inquiries prompted by the advertisement, and second, the proportion of sales resulting from those inquiries. This information can then be applied to the cost

to determine what percentage of profit the advertising investment has paid.

As the effect of advertising is cumulative—it being conservatively figured that only one-third the results are immediate results.

There are few lumbermen who have made the scientific study of advertising in reference to the lumber business which has been made by Karl P. Aschbacher of the Swan Creek Lumber & Supply Co. The advertising manager of that firm, Mr. Ralph B. Way, recently took a prize offered by an Advertising Club to the advertising man who could give a record of definite results received from a series of "ads."

The Swan Creek Company recently carried three garage "ads" in the papers which cost \$330.

"Don't decide that advertising does not pay," says Aschbacher, "until you have tried it out."—Wood Construction.

Manager Wanted for Canadian National Newspapers and Periodicals Association

To act also as Secretary-treasurer, and carry on the Association's general work, under the direction of the President and the Board of Directors, study the interests of the various classes of publications in the Association, and plan and carry on promotion work in their interests. Applicants should understand advertising and merchandising.

Apply in writing only, stating age, full details of experience, and salary expected. Applications will be treated as confidential.

Address Acton Burrows, President, Canadian National Newspapers & Periodicals Association, 70 Bond Street, Toronto.

Review of Current Trade Conditions

Ontario and the East

Business in the lumber arena moves on with a steady swing and with constant stiffening of prices, a growing shortage of stock and an increasing demand. The situation, instead of clearing, appears to be getting more complicated by reason of the threatened increase in freight rates, the aviation of exchange, the reports that a few representative bodies will urge embargoes be placed upon certain hardwoods, and the fact that transportation has become more acute due to the recent severe storms and the necessity of additional American cars to make shipments across the line. A great deal of speculation is now going on regarding the purchase of stocks for the coming season, and while negotiations are in progress not many large contracts have yet been closed, although some very fair offers have been made to producers. In not a few instances, manufacturers are asking more for next season's output, both in hard and softwoods than the wholesaler is now receiving. This all indicates the steady upward trend in values and confirms the expressed views that not only will the figure for practically all lines of forest products hold firmly, but that higher levels will be reached.

The causes contributing to the upward movement are numerous and were ably reviewed by President Power of the Canadian Lumbermen's Association at the recent annual meeting in Quebec City. Advices from the West also touch upon the present state of affairs and fully analyze the influence of existing factors in the manufacture, sale and distribution of lumber. Without attempting any learned exposition of the chief causes, the one outstanding feature remains that there is a world-wide shortage of lumber and building activities, which were held up during the war, are now getting under full swing and demanding a larger toll of wood goods than at any juncture during the past five years. In spite of ascending quotations, there does not appear to be any doubt but that construction in all the large centres will be conducted on a greater scale than in any season since 1914. Whether there will come a halt later on no one can tell, but labor of all kinds is most insistent in its demands and carpenters are asking stiff increases; the favorite figure being \$1.00 an hour. Allied trades are also joining in the campaign for considerably more money and shorter hours and naturally all this will pile up structural expenses to an unprecedentedly high mark.

There is a lively call from all the Eastern States for Canadian white pine and wholesalers are not at all disturbed if local consumers of hemlock, spruce and white pine do not meet the figure asked. They know that they can realize more handsomely on their offerings across the border and get the benefit of the exchange, which has lately been mounting at a surprising rate. The majority of firms in the Dominion insist on payment in American funds, and even against adverse freight charges, Canadian dealers are able to quote considerably lower than some of their American competitors and still come out on the right side in the transaction.

Dry stocks of hardwood of all kinds are very scarce and whatever limited winter supplies are coming on hand through the operation of small mills, are being eagerly bought up. One leading hardwood merchant stated this week that he had never seen the situation quite so acute as it is at present and that furniture factories, piano and phonograph companies, automobile concerns and other large consumers were sending out their representatives who are calling on wholesale dealers and manufacturers and making diligent inquiry respecting the prospects of getting a supply during the coming season. Thus the old order of things is reversed and, instead of lumber salesmen calling upon heavy consumers and soliciting business, the latter are sending out their own exponents to spy out the land.

Representatives in Eastern Canada, who have just returned from the West, report a growing scarcity of B. C. stocks and the outlook for sufficient log supply is a menacing one. There has recently been an advance of several dollars in the base price of timbers and only a few odd carloads of stock are coming through. Owing to the unparalleled demand from across the border and the advantage which the exchange rate works out to Canadian mills, there is little hope of any reduction in price; on the contrary each week sees a jacking up in values in every line. Even shingles are once more in the ascendancy and triple X are now selling around \$9.00 delivered in Toronto. Some Eastern representatives of Coast mills are hoping to secure a few carloads of flooring, boards and interior trim stock early in March.

So far as logging operations are concerned, reports from vari-

ous centres differ. In certain districts production will be greatly increased and the weather has been favorable for yarding and hauling. Labor has also been plentiful. In other sections there is the usual unrest and "travelling". One Eastern firm stated that their records showed the names of three men on the pay list for every one who stayed in camp. The cost of supplies is ascending all the while and wages remain firm with an increasing stiffness in some districts. On the whole, however, the cut during the present year should considerably exceed that of 1919, but there will be no difficulty in disposing of every foot of it and the majority of the bigger cuts will be sold without trouble according to present prospects.

There is still in the Province of Quebec 164,000 Petrograd Standards or about 32,000,000 ft. of spruce, which was purchased by the Imperial Government to go forward to the Old Country. This will fill twelve or fifteen large steamers. The material is all 2 in. and 3 in. thick, and is at Quebec and lower St. Lawrence ports. Exporters in Quebec report that the purchase price of spruce at the present time is \$10.00 to \$12.00 higher than last season's figures, and is stiffening all the while.

Building activities continue brisk in all the leading centres. The value of the permits issued in Toronto during January were four times greater than during the corresponding month in 1919. The total was \$1,467,330, as compared with \$225,375 last January, and \$1,276,000 in January, 1913, the previous high record.

There were 256 permits issued during the past month, and 269 buildings erected. Of this number private and public garages head the list, numbering 60, and having a value of \$36,275. Dwellings come next, with 49 erections, valued at \$196,700. There were two factories, valued at \$150,000; seven warehouses, valued at \$505,000; and 20 stores, valued at \$98,600.

Recent word from Ottawa says that a general advance ranging all the way from \$5 to \$12 or more per thousand feet has taken place in the Ottawa lumber market during the past few days, and the prospects are that prices will still go higher before the spring months.

The latest advance affects nearly all the pine grades from mill culls up to good lumber. With the present shortage of stock offering on the Ottawa markets, dealers do not believe there is any hope for the price coming down.

United States

There is an insistent demand for all kinds of lumber in all parts of the country where lumber is produced, and buyers do not hesitate in paying any price asked if they can only get stock. The transit car business is dominant, and cars of desirable stock are easily sold at top notch prices. Northern pine prices have continued to advance, though there is a very wide variation in the values asked by different producers. Yellow pine markets are firm with a tendency to higher prices all the time.

Car supply in all the producing sections is far from adequate, and though the Railroad Administration has promised relief time after time, it seems impossible for the mills to get anything like their full requirements. Particularly exasperating is the irregularity of the supply. Some days the mills of a certain section will be fairly well supplied, and the next day they will get hardly any cars. This is demoralizing to loading crews.

Distributing centres for southern pine report a big demand for that wood despite the recent marked price advances, and that as quickly as the mills forward stock sheets the lumber is disposed of. In many of the southern producing districts the weather is very bad and consequently is cutting down production. There is an extreme stock shortage at the mills, most of which have shipped out practically all their dry lumber and common grades. Many mills are shipping one half dry and the other half green lumber in dimension and boards, and selling it as such. That illustrates the situation quite clearly. Numerous buyers have visited the South lately, looking for stock, but often with little success. Bidding for stocks is spirited and this has forced prices upward additional points during the last fortnight, and although some sellers believe that the peak is now in sight it is extremely difficult in view of the market situation as a whole to accept such a statement.

Not only are the hardwood mills about sold out of stock, but the jobbers also have little to offer that is in shipping condition. There is a steady demand, especially since woodworking factories have started up following the regular holiday shut-down. A great

ST. JOHN, N. B.

many of the larger factories and some of the smaller ones have orders placed, but they are not getting the material, and do not know when they will get it.

Sash and door factories are in the market for birch and are searching the market closely to find supplies, but without much success. The dry birch is sold out and the new cut will not be ready for the market for some weeks, though the northern hardwood mills have started operations on hardwoods.

Southern hardwood mills in the districts where the timber grows on low lands see little prospect for an early start. The heavy rains have made it impossible to get the logs out and this condition will continue for many weeks. The few mills that can operate are submerged with business, and could take any amount more if they so desired.

Prices for all hardwoods continue to advance. The price level is the highest ever known, but it has not yet reached the top. Supply which is light, and demand which is insistent, rule the market.

Factories manufacturing interior finish and flooring cannot keep up with the consumptive demand, and many buildings started long ago are still waiting for the doors, sash and trim.

Great Britain

The upward movement that hardwood values have taken has resulted in a certain restriction of business, although this is not general, as many buyers are taking an early opportunity of doing the best for themselves, well knowing that delay in such cases is expensive.

The furniture manufacturing and kindred trades are busy enough, and as far as can be judged will need a considerable volume of hardwoods other than already purchased stocks to cope with their future requirements. They will have to pay higher prices than they have been doing of late, and this will mean dearer furniture for the public. That cannot be helped, unfortunately, as the importers on this side are unable to obtain hardwoods from Canada and the United States, except at considerably advanced rates.

Trading from stocks has been steadily maintained. The market situation has evidently prompted buyers to get busy before the full effect of the rise in values is felt. There is a good demand for spruce

deals, and rates are very firm. Business is restricted to some extent by the fact of the Government holding a very large stock, but still there is a tendency to extend operations.

Baltic deals are in good request. The exorbitant demands of the Swedish shippers have given a stimulus to spot trading. Values are mounting daily, and are now considerably higher than before the holidays. Three by 11 deals are scarce, and command a good market at £60 upwards per standard; 3 by 9 are quoted £46 upwards, and battens £43/45. The demand for flooring boards is fairly strong, and higher rates are in prospect.

Shippers have advanced their quotations for Halifax and St. John's birch planks, about £38 c.i.f. now being asked, says the "Timber News." The consumption of this stock is satisfactory, but values are tending rather too high for buyers. A good deal of native beech and sycamore is being used in chair making, and this industry, not being altogether dependent on Canadian stock, will probably restrict their purchase if rates go on increasing. Merchantable Quebec birch 1 in. boards are quoted £50 c.i.f., a figure which will probably be advanced very shortly.

Values of pitchpine logs and lumber are exceedingly firm, with a tendency to add further to recent advances. The market has recovered to a great extent from the easing of values caused by the heavy import of a few weeks back. The future trading outlook is extremely uncertain, and importers appear to be in for a harassing time later on this year. All descriptions of softwoods are mounting steadily in value, and if the process is not checked a very unsatisfactory state of things will ensue.

The marketing of native woods will undoubtedly be greatly stimulated by the movement in imported timber, but the quantities of the latter are so huge that it may be unwise to place great reliance on the home woods having a marked effect in ameliorating the situation. Something, of course, will depend on freight rates. If a reduction takes place on a respectable scale, and if the shippers do not filch the advantage by increasing f.o.b. prices, it is possible that importing costs later on may be brought within reasonable distance of 1919 figures.

Market Correspondence

SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD

Lumber Stocks are Moving Lively at St. John

At St. John during the last two weeks a great deal of lumber has been removed from the mill wharves, both to vessels and to cars and been thereby shipped to Great Britain and the United States. This will give the mills piling room for spring sawing. If shipments continue on the same basis to the end of February about all the lumber will have been moved from the plants. A large volume of rotary cut stock has also been shipped from the district surrounding St. John from portable mills which are sawing all over this vicinity. The major portion of this lumber has gone direct from the mill siding into cars and been shipped to United States points, the cuts of these mills being sold in the vicinity of \$36.00 to \$37.00 on cars, payable in American funds, and anyone receiving such funds to-day (Feb. 5th) would have a premium of 16 per cent. over this price on each thousand, or about \$5.00 per M feet. The exchange situation is certainly benefiting lumbermen shipping to United States points, but taken from a general trading standpoint, it is not a good condition, and is reactive as far as the British market is concerned. Some sales of deals to be manufactured during the coming season have been made largely from the North shore of New Brunswick, at such ports as Newcastle, Dalhousie, Campbellton, and Bathurst, at prices around \$45.00 per M., f.o.b. ship. At St. John a few sales have also taken place at about same price on sellers' wharves.

There is plenty of demand for pine and prices have also advanced. Stocks are very limited and a few more purchases will clear up all stocks available.

Laths are yet in good demand at around \$14.00 per M. on cars St. John. A good many round wood laths are being sawn and now moving into United States. Whether this price will keep up, remains to be seen. It is anyone's guess.

This section of country is well covered with snow, and woods work is progressing in good shape. If snow continues to hold, all logs will be landed on streams in safety by the middle of March. Logs are plentiful along the rivers, but are inferior in quality. A great many worm-damaged logs have been cut this winter to avoid entire loss, as if left standing for another year, they will not be fit for commercial purposes of any kind. All mills at St. John anticipate

a fine cut of logs for the coming season and are being prepared for them by the general repair crews.

Factory and local trade is quiet at the present time, but as soon as the weather moderates there will be much work in hand and a busy season is anticipated.

Ottawa Reports Market as Strong and Active

Continued firm prices coupled with an increased foreign and domestic demand, together with the prospect of an increased log output for the 1919-20 season, characterized the Ottawa lumber market during the opening period of February, and tended to make an already strong market, stronger.

The trade generally from manufacturer to retailer remained most optimistic as to future business, and though record quotations prevailed there was no sign of price cutting. Taken all around the indications for the first part of the month, were that there is going to be a grand old scramble for stocks when the spring building operations get under way.

Also it developed and was brought most forcibly to the buyers' attention, that stocks of good lumber are prized, and those fortunate enough to possess them, showed no hurried inclination to sell, but rather preferred to "hang on" to what they had.

"Anyone that has good lumber now is trying to keep it, rather than throw it into the market," was the comment made in more than one lumber office in the Capital, to inquiries by the "Canada Lumberman."

As during January and December the principal export demand came from the United States. It was largely, if not wholly, for the middle and lower grades, which would be used for shelving and house trim. The domestic demand came mostly for rough lumber suitable for sheeting and crating, and the mill run grades.

There were two if not three important adverse factors that the trade gave considerable attention to. They were: the car situation, factory labor outlook, and the possibility of further steps being taken to correct the adverse exchange situation with the United States.

Regarding the exchange situation the lumbermen, firms and com-

EDGINGS

Ontario

R. McDonald has started a sawmill at Embro.

The grain elevator and sawmill of James MacIntosh, Ilderton, Ont., were recently destroyed by fire. The owner contemplates rebuilding.

The McFarlane Mfg. Co., 160 River St., manufacturers of ladders, etc., have bought out the York Lumber Co., Main Street, East Toronto.

Gates Refractories, Ltd., engineers and manufacturers of fire bricks, etc., have opened a branch office at Room 118, St. James Chambers, Church and Adelaide Streets, Toronto.

The capital stock of the Fesserton Timber Co., Toronto, has been increased by supplementary letters patent from \$40,000 to \$250,000, by the creation of 4200 shares of new stock of \$50.00 each.

Dominion Shipbuilding & Repair Co., Ltd., Toronto, have been granted a Dominion charter to build or repair boats and vessels of all kinds. Capital \$3,000,000. N. S. Robertson and H. L. Steele, barristers-at-law, Toronto, are among the incorporators.

Good progress is being made on the work of rebuilding the sawmill of the McGibbon Lumber Co. at Penetanguishene, Ont. The work is being carried out by day labor and it is expected the mill will be completed by April 1st. The dimensions are 40 x 140 feet.

The Western Canada Pulp & Paper Co., Ltd., with a capital stock of \$1,000,000, and headquarters in Toronto, has been granted a charter to carry on in all its branches a pulp, pulpwood, paper, log, lumber and timber business. Among the incorporators of the company are Joseph A. Kent, accountant, M. C. Purvis, barrister, and others.

Twenty-two young Windsorians from 6 to 10 years of age had an enjoyable outing recently. The trip was made possible through the kindness of Mr. and Mrs. Ira Crowe, who had the little ones driven to Mr. Crowe's lumber camp where they remained for the day. The party enjoyed coasting, clearing the rabbit snares and many outdoor games.

The sawmill of the Petawawa Lumber Co. at Brule Lake, in Algonquin Park, Ont., was burned to the ground lately. The mill, which had recently started the sawing of birch, had cut only about 400,000 feet, and it was the intention of the company to operate all winter. Pembroke, Toronto and North Bay lumbermen are financially interested in the Petawawa Lumber Co. The loss is about \$15,000, and is covered by insurance. It is likely the mill will be rebuilt.

A large frame boarding-house belonging to the Beaver Board Co., of Thorold, was completely destroyed by fire recently. A number of men were asleep at the time and experienced great difficulty in getting their belongings and making their escape, the weather being ten degrees below zero. The adjoining houses were all saved. The plant of the company is about a mile and a half south of the town, and owing to the deep snow, the company's firemen, with the assistance of help from the nearby factories were forced to fight the flames as best they could without the aid of the town fire department.

A provincial charter has been granted the Calder Pulp & Timber Co., with headquarters in Niagara Falls, Ont., and capital stock of \$250,000, to carry on a pulpwood and lumber business and to make pulp and paper of all kinds. Among the incorporators of the company are Bert C. Crittsinger, of Niagara Falls, N.Y., and others. The company will operate a rossing plant at Burt in Northern Ontario and the work of construction is progressing favorably. John B. Roche is the manager of the company, which will ross about 110 cords of pulpwood a day. While the company is not in the lumber business, the large logs of poplar and spruce will probably be cut into boards and building material. Mr. Roche states that there will be a large cut of wood in Northern Ontario during the present season.

Eastern Canada

The Christopher Lumber Co., Montreal, D. Berthiaume, proprietor, was recently registered.

The Campbell River Lumber Company has had a very successful year and is preparing to increase its kiln capacity.

The Saguenay Co., Ltd., of which William Blanchette is manager, have begun the erection of a sawmill at Chicoutimi, Que., which will cost \$40,000.

Under the new colonization scheme of the Quebec Government, communication roads through forests will be built for the purpose of developing timber lands.

It is reported that B. A. Scott will cut this winter 100,000 logs and 60,000 sleepers on the Grand Peribonea River, while Mr. Baker is cutting 100,000 logs at Lake Edward, of which 50,000 are contract and 50,000 for himself.

Globe Shipping Corporation, Limited, Montreal, P.Q., have been incorporated to build or repair steamships, tugs, sailing vessels, barges and boats of all kinds. Capital \$1,000,000. L. MacFarlane, K.C., and W. B. Scott, advocates, of Montreal, are among the incorporators.

William Sullivan, of Nelson, N.B., is doubling the capacity of his sawmill this season and is installing a Hamilton, steam tension, double cut band mill with steel carriage equipped with steam set works. The plant at present has a Hamilton band mill and a horizontal Mershon band resaw.

The Canadian Timber Securities Co., Limited, Quebec, P.Q., have been incorporated with a capital of \$250,000, to acquire by purchase, lease or otherwise, timber licenses, timber lands and limits, standing timber, cut timber, sawmills, etc. F. B. Common and L. H. Ballantyne, advocates, both of Montreal, are among the incorporators.

According to an announcement made in the Quebec Legislature, Price Bros. and Company intend to extend their plant on a very large scale at

Saguenay River, three miles from Chicoutimi. The plans include a model town to accommodate 15,000 people, and also pulp and paper mills, the total expenditure being \$15,000,000, which will be spent in the next five years.

A charter has been granted to David Michaud, Limitee, with head office in Montreal, and a capital stock of \$40,000, to carry on the business of manufacturers and dealers in pianos, phonographs and other musical instruments. Among the incorporators of the company are Edmond Archambault, merchant, and Joseph Archambault of S-Paul l'Ermite, Joliette, Frederick A. Toupin, Arthur Mongeau, Guston Charlebois, Montreal.

Hon. Honore Mercier, Quebec Minister of Lands, has given notice of a bill respecting the expropriation of lands required for the development and utilization of water powers. It happens that when the Government constructs dams for the storage of waters that large areas are flooded. The object of the bill which the Minister will bring down is to permit the Government to compensate the holders of such lands by giving them equal areas of forest land in some other district as near as possible to the one which has been flooded.

A correspondent from Magog, Que., says lumber, fuel, pulp wood, etc., are now coming into Magog in large quantities. At the Industrial Specialty Manufacturing Company's plant recently there were about a hundred loads of logs brought in. It is stated that this concern alone expect two million feet of lumber to be hauled in to be manufactured into new products; added to this the fact that there are three sawmills and a sash and door shop all buying all they can, also a considerable quantity being brought in for shipment to the United States, makes Magog quite a lumbering centre.

Stanley Douglass, of Fredericton, who has taken over the plant of the York & Sunbury Milling Co., at South Devon, will cut about 6,000,000 feet of spruce and hemlock lumber during the coming season, besides lath and cedar shingles. Mr. Douglass also owns a mill at Stanley, N.B., and will saw upwards of 3,000,000 feet of spruce and hemlock at this plant. Mr. Douglass has been in the lumbering game now for about twenty-five years and always on his own account. He has been successful in his operations. This year he will be engaged in the industry on a more extensive scale than ever, and believes that the prospects for the coming season are exceptionally good.

Western Canada

The Masset Timber Co., which was recently reincorporated, will reopen its large mill at Graham Island, B.C. The mill at Bickley Bay will also be reopened in the near future.

A large sawmill is about to be erected on the river near Stave River. Messrs. Abernethy and Loughheed contemplate building a plant and manufacturing their lumber in place of shipping logs.

G. O. Buchanan, formerly of Maple Ridge and now of Vancouver, has bought all timber in the foundations of the plant built on the point of Lulu Island by the British Canadian Lumber Corporation, and dismantled last year.

One of the largest timber deals put through in recent months is that of Messrs. Abernethy and Loughheed, who have purchased the entire timber limits around Steelhead, including those formerly held by Mr. W. J. Clarke.

Among the recent incorporations of British Columbia are the Rat Portage Logging Transportation Co., Vancouver, capital \$200,000, the Gerrard-Lardo Lumber Mills Ltd., Vancouver, capital \$300,000, Ryan, McIntosh Timber Co., Ltd., Victoria.

A new shingle mill is in course of construction at Langley Prairie. Mr. R. E. Mills, late of the Forestry Department, being the owner. Mr. Mills put in seven years as warden and ranger, in the service of the Provincial Forests Department.

Blundell, Stewart & Welch have opened a logging camp to handle an extensive block of timber near Courtenay on Vancouver Island. Shipments will be made from Union Bay. The timber was obtained under lease from the E. & N. Railway Company.

The late W. L. Tait, lumberman and contractor, Vancouver, who died a few months ago, left an estate valued at approximately \$500,000, according to his will filed recently. Two sisters residing in Toronto are beneficiaries. Mr. Tait was a native of Ontario.

James Crockett, of the Gunnerson-Crockett Co., of Sydney, Brisbane and Melbourne, who have been placing orders for eight cargoes of lumber on the B. C. Coast, has just bought 2,000,000 feet in Siberia. Mr. Crockett says he was compelled to do this as the B. C. mills could not supply the balance.

The Canadian Realty Co., Ltd., with a capital of \$49,000, and head office in Fredericton, has been granted a charter to carry on and operate a general pulpwood business. Among the incorporators are Charles E. Clowes and John A. Clowes, Mauderville; E. S. Pettigrove, Marysville and R. W. McLellan, Fredericton.

L. N. Godfrey, Ltd., with a capital stock of \$100,000, and headquarters in Montreal, has been granted a federal charter to deal in timberlands, timber limits, sawmills and woodworking of all kinds, as well as to make furniture, doors, sashes, blinds, etc. L. Joron, U. Joron and G. H. Seguin, advocates, of Montreal, are among the incorporators.

The Nicola Pine Mills which are now located at Merritt, B.C., estimate that their cut will be in the neighborhood of forty million feet this year. Last year the cut was slightly over eight million feet of which over four million feet was destroyed by the fire in the month of May. This fire interfered to a large extent with the operations of this mill, as it reduced the output by at least twenty million feet.

Another sawmill is to be erected at Port Kells in the spring, according to plans being perfected by Booth and Robers. During the past few months this firm has shipped out seventy cars of ties and posts. The N. K. Wade Company is being kept busy turning out ties and other lumber products. West of Langley Fort, the Derby Lumber Company has established a logging camp using the Salmon River as booming grounds.

J. J. O'Neill, of the White Spruce Lumber Co., recently arrived in Fernie, accompanied by a number of Minnesota capitalists, to look over the property of the White Spruce Co. The log cut is amounting to nearly 50,000 feet daily. A large steam tractor has arrived and will be used to move the mill across the river to the new site on Hartley Creek. The amount of valuable timber on the limits is estimated at 200,000,000 feet, and will require about ten years to cut. The new mill will have a capacity of 100,000 feet a day, and it is expected will be in operation by the end of the present month.

Market Correspondence

(Continued from page 74)

panies doing business with the United States were perfectly satisfied to keep on receiving American cheques and payments which netted them from ten to a higher percentage, above their face value.

On the other hand it was heard that to get some of this business some stocks that the dealers would have sooner kept than sold had to be parted with. Also there was another phase, that of having to ship lumber previously contracted for at lower prices than those which prevailed in the local market now.

Comment on the exchange situation could be heard almost anywhere where business men met. On some lines it was argued that what the lumberman gained by the exchange rate in the way of receipts for sales, he had in turn to pay out for pork and other supplies and commodities purchased in the U. S. This argument did not appear to some to hold good as concerning this year's operations, as its opponents argued that the pork supplies needed for the bush operations had been purchased months ago when the exchange rate was normal, or the amount of the adverse balance was not so high as it is to-day. As against this again the proposition was advanced as to the increased cost of next year's supplies.

The supply of foreign cars did not show any improvement and perhaps if anything grew worse than it had been. One reason advanced for the shortage of U. S. rolling stock was that a great number of cars were tied up in congested terminals on American lines. With factory labor, it was heard that the workers would soon present new demands asking for increased wages, and improved working conditions.

Export business to European countries remained quiet and about the same as in the month of January. There was if anything an increased activity in office business preparatory to the expected opening up of unrestricted shipping conditions in April or May. Reports regarding bush operations indicated that they were showing improvement, and that the log output of the Ottawa Valley for this season would all around show an increase over last year. Some companies returns to date indicated increases of twenty per cent. and higher.

One of the most optimistic outlooks was that of the need for houses this year, indicating that building and construction will show a great revival.

Dream City is Now Being Dismantled

The dream city of Lake Huron, St. Joseph, located a few miles north of Sarnia, is a thing of the past. This is the city which Narcisse Cantin, a noted French-Canadian, about twenty years ago founded, dreaming of the establishing of a French-Canadian port in western Ontario.

He spent over \$600,000 there, nearly all of which was supplied by Montreal capitalists, and he even induced the Dominion Government to erect a dock and harbor. The buildings included a hotel with a couple of hundred bedrooms, and a bar 100 feet long. In addition he built probably 100 fine houses and a block of brick stores.

But the wharf never accommodated a ship, the hotel never had a guest, and the houses proved only homes for bats and owls. Now the shortage in building materials has led a London wrecking company to buy the hotel, stores and houses and they are being wrecked and brought to London, Ont.

Montreal Conditions Uncertain and Prices High

Montreal conditions are very uncertain, and many wholesalers are perplexed as to the immediate future. Just now we have a bullish market. Stocks are very scarce, and it is a rare thing to come across a firm with any appreciable amount to offer. There is no difficulty in selling—the difficulty is to get the lumber. Then as to prices, they are high, and the only measure of value is what the goods will bring and the necessities of the customer.

Many are asking when will the upward movement cease? Will this high range of values affect the demand later? Wholesalers differ in their estimates of the probable trend of events. While some are of opinion that the end is not yet in sight and are holding for still better prices, others believe that as soon as the new cut comes on to the market there will be a steady reduction in values; also that the present prices are bound to adversely affect consumption, and that those who have money to invest will decline to go in for building at such extravagant costs. Much depends upon the amount of the available supply and other factors.

The high cost of woods operations, driving, sawing, etc., will have to be figured in the price to be charged for the new cut, and these will have an important bearing on prices, so that even if the demand is only fair, the chances are that we shall see a good level of quotations, even though they may not maintain their present position.

One wholesaler who made inquiries as to the new cut was in-

formed that the manufacturers did not intend to sell now for future delivery; the dry stock will be listed each month, the goods to be shipped almost immediately on receipt of order.

There is a very good demand for American account—in fact better than the supply. B. C. stocks are scarce, and what little lumber is on offer is at very stiff quotations. The pulpwood market is very firm, and with a shortage in wood, prices have advanced.

During January the Montreal building permits totalled \$227,655, an increase of \$167,501.

Exports of Canadian pulp and paper continue to show substantial gains, while exports of pulpwood have again fallen off. During November, pulpwood exports were 60,098 cords, valued at \$635,361, compared with 85,239 cords, valued at \$866,361 in 1918. For the eight months of the fiscal year the total was 501,046 cords, of a value of \$4,525,324, as against 1,132,987 cords of a value of \$10,846,864 in 1918. For November the exports of paper, mechanical and chemical pulp were \$9,016,987, compared with \$7,155,850, while for the eight months the figures were \$64,626,540 and \$53,954,984 respectively.

Relative Advances in Lumber and Wheat

That 40 bushels of wheat now will buy 15,000 shingles whereas in 1914, the same amount of wheat would buy only 8,500 shingles, is the subject of a cartoon by a progressive lumber paper, in emphasizing the relative cheapness of lumber when compared with such other products as wheat. The same lumber paper estimates that in 1914, 39 bushels of wheat would buy 1000 feet of common lumber; in 1919 the same wheat would buy the lumber and in addition 20 sacks of cement and 20 sacks of plaster. Because the farmer has been complaining about the high cost of building materials, wheat in this instance was chosen for the comparisons.

A loud cry for help last summer came from the farmer and the question has been repeated and re-emphasized—how make farm life more attractive. One answer is to improve the housing conditions of the farm family, the farm community, the farm animals and the farm implements; in other words, to improve both the living and the working conditions on the farm. Just now, before the spring sowing season is on, the farmer can well plan for the betterment of his buildings.

Timely Addresses on Forestry Topics

Addresses covering a wide range of forestry subjects were delivered at the fifth annual banquet of the Foresters' Club, Faculty of Forestry, University of Toronto, recently. A. W. Beatty, President of the club, presided, and addresses were given by D. R. Cameron, E. J. Zavitz and E. H. Finlayson. The guests of honor present were: Clyde Leavitt, Chief Forester, Commission of Conservation, Ottawa; D. R. Cameron, Dominion Forestry Branch, District Inspector for British Columbia; Charles MacFayden, Dominion Forestry Branch, District Inspector for Saskatchewan; E. H. Finlayson, District Inspector for Alberta, and E. J. Zavitz, Provincial Forester for Ontario.

Housing Acts Adopted by all Provinces

Housing acts, adopting the Federal project for which \$25,000,000 was set aside on February 20th, 1919, have either been passed or are being prepared in each of the nine Provinces, according to Mr. Thomas Adams, Town Planning Adviser to the Commission of Conservation, Ottawa, who has the Federal scheme in hand. There has been delay in two of the Provinces, but, it is expected that legislation will also be adopted in these.

According to information reaching Ottawa, British Columbia and Ontario have made most progress in housing development. About 1,400 houses have been erected or are in course of construction in Ontario, and some 90 municipal schemes have been prepared or are under consideration. It is estimated that between 4,000 and 5,000 houses will be erected this year in Ontario if money is available.

And for Heaven's sake, keep that yard clean. Don't let any thing lie around or any condition prevail that would cause a fire in lumber that costs as much as yours has. And—happy thought—increase your insurance as your replacement investment increases, or you may wake up some morning and find your yard in ashes, and yourself just one-half as wealthy as you were the night before.

The retailer who envies the lot of seemingly more fortunate men, should consider the proposition carefully before he expresses his envy. He should remember the Irish housewife who said to her husband: "Pat, you shure have a snap. Here I am all day in this hot kitchen, while you're down in that nice cool sewer."

How Shall Walnut be Kept from Checking?

Walnut is a costly veneer. The difficulty in keeping it from checking on account of unsatisfactory drying apparatus or methods is an annoying trouble.

With the "Proctor" Veneer Dryer, however, walnut is dried in perfect commercial condition—without checks or splits.

It is advantageous to seek for the quality guaranteed by the "Proctor" Drying Machine.

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

DUPLEX TRUCKS

BUILT FOR BUSINESS

Gentlemen:— Hot Springs, Ark.

We have tried out a great many trucks during the past year. The Duplex will go loaded where other trucks are up against it empty.

The Duplex man hauled logs for us Wednesday on a $4\frac{1}{2}$ mile haul, making five trips within ten hours. Our timber is one-half mile from the road and all other trucks had to have the logs hauled to the main road, as they could not go over the rough roads in the woods. The driver made an additional load after ten hours hauling, pulling an eight-wheel Stanley wagon loaded with 900 feet of small pine logs, in addition to 1,000 ft. of oak logs, hauled on Duplex truck and semi-trailer. We believe the Duplex would have pulled in two more wagons loaded the same as the one hauled. Our day's haul totalled 7,460 feet.

Very truly yours,

HOPE LUMBER COMPANY,

By: Tolbert Fields, President.

Duplex Limited

Medium Capacity—Two
Wheel Drive—High Speed

DUPLEX
BUILT
FOR BUSINESS

DUPLEX 4-Wheel Drive Trucks are typical examples of American progress. They occupy a prominent place in every line of the lumber business and their prestige is permanently fixed in the minds of business men.

Yet it is little wonder that increasing numbers of lumber dealers are learning about Duplex performance and applying it to their own business. Merit soon establishes a standard and the buying public are quick to sense a leader.

Duplex truck success is due to a number of things but mainly to their performance—their dependability. Profitable truck operation can come only from constant service.

Get all the facts about Duplex Trucks. You will find them interesting and perhaps profitable.

Sturtevant

REG. U.S. PAT. OFF.

PUTS AIR TO WORK

A system that is designed right means less friction in pipes; consequently a large power saving. Sturtevant Systems are right and stay so.

A Typical Sturtevant Made-to-Requirement Planing Mill Exhaust System

KEEP YOUR PLANING MILL "CLEAN AS A WHISTLE"

Sawdust and shavings removed directly from the saws and planers, do not get on the floor, scatter, and hide parts of moving machinery. The workmen are not endangered nor are accidents possible which often result in costly injuries.

Sturtevant
(TRADE MARK)

PLANING MILL SYSTEMS

remove the sawdust before it gets into the room; therefore, your workers are given better air to breathe, production is accelerated, and the men are happier. The Sturtevant System is built with great care and **to your requirements**. All the galvanized iron piping, hoods, and collectors are built to measure—to fit your machines and the rooms they are going into. The fans and fan wheels are very rugged and assure operating satisfaction under severe strain. There is a distinct advantage and assurance of satisfaction in having a system built in one factory where your complete interests are supervised. Many of these systems have been put in operation in the United States and Canada and all are working to the entire satisfaction of the owners.

No Matter How Cold It Is— **KLIM** Never Freezes

Klim is powdered pasteurized separated milk. Every particle of water is removed from the liquid by a method of spraying into currents of warm air. When the dry powder is packed into the 10-lb. tins, it absolutely cannot freeze. Klim is the only form of milk that defies cold weather. It can be stored in any dry place. Klim remains fresh and sweet and is always ready for use in all cooked dishes requiring milk. Klim is good for table use in tea, coffee, and cocoa. In many lumber camps, Klim is the only milk used.

Separated milk contains all the nutritious value of whole milk, except fat, and costs much less. Sufficient fat is consumed in other foods, such as meats, butter, shortening, etc., to supply a well balanced diet.

To get fresh liquid separated milk into a lumber camp is almost an impossibility. About 87 per cent. of milk is water. This is what makes shipping so expensive and precarious. As long as the milk solids are in solution bacterial action will take place, but when the water content is removed such action ceases entirely.

Follow the directions on label when using Klim. Use the exact quantity required. Place Klim on top of water and whip briskly until dissolved.

All wholesale grocers and supply houses sell Klim in 10-lb. tins, 6 in a case.

Write direct to us for booklet "The Wonderful Story of Klim," and trial tin for use in your own home.

We have a letter

from the General Superintendent of the C. A. Smith Lumber Co. of Minneapolis. Here is what he says about our Genuine Babbitt:—

"We are running our big gang the third year on 11" journal running 268 R.P.M; also our small gang 9" journal running 258 R. P. M.

"We did have very much trouble with our resaws until we commenced using your babbitt. We could find no babbitt that would stand more than a short time. We now have no more trouble with them and they are running the third year on the same babbitt."

Aluminum Genuine Babbitt is doing great work in big gangs throughout the lumber industry. Let us send you a trial bar.

Another Reason why Huther Brothers Dado Heads Are Better

The sages tell us that experience is the best teacher. Experience is the thing for which employers pay big salaries, because it teaches men how to avoid making mistakes.

Fifty years ago we started experimenting with groovers, and our experiments led to the inventing and patenting of our type of Dado Head which we have successfully marketed for many years.

The experience of fifty years of making better saws better is your protection when you buy a Huther Brothers Dado Head.

HUTHER BROS SAW MFG. CO.
ROCHESTER, N.Y.

This Husky Belt Stands Steam

Steam quickly plays havoc with most belts. Not so with this Spartan Leather Belt, which for more than two years has been frequently exposed to this destructive agency.

Why? Because it is made of Spartan Leather—a specially tanned leather which resists exposure to steam, oil, chemical fumes, heat, and other conditions which quickly destroy ordinary leather.

Spartan is one of the Graton & Knight Standardized Series Leather Belts. In that Series, there is a belt standardized for every drive. Write for our book, "Standardized Leather Belting."

"GOOD GOODS WIN"

"HAMILTON" CIRCULAR RE-SAWS

Here is a strong, rigid, well designed machine, specially gotten up for resawing slabs. The feed rolls are carried on a sliding frame that is easily adjustable to cut lumber any desired thickness. The binding or press roll is 13 in. diam., fitted with saw discs and power driven. The saw used is 42 in. diam., driving pulley 18 in. diam. x 12 in. face. Cut shows Left Hand Machine.

We also make this machine with wooden frame, having the mandrel and saw carried on an adjustable sliding frame.

Descriptive circular sent upon request.

"HAMILTON" HUSK FRAMES

Made in different sizes to suit all requirements. Frames are all of cast iron, of heavy section throughout, planed on top and bottom, with mandrel boxes lined with high grade babbitt. Mandrels are exceptionally large, of forged steel with forged collar, and the guide is the famous Parkhurst steel saw guide with steel splitter.

We manufacture a complete line of up-to-date Sawmill Machinery for either Band or Circular Mills.

Goodyear Builds Better Hose

There was a time when men thought that rubber tires had reached their limit of quality. Then Goodyear entered the field, and, by leaving the beaten path, built the largest tire business in the world.

When Goodyear scientists and engineers turned their attention to Industrial Hose they were not satisfied with many of the existing standards. They started from the ground up. They built for Industry's needs. Was the rubber lining unsatisfactory—Goodyear men worked till they had discovered a better one. Did a cover wear out too quickly in hard service—the knowledge gained in building automobile treads was applied to hose covers. New specifications were worked out. New formulae were developed.

The Goodyear Industrial Hose offered you today is the result of a definite policy. It is the *solution* to your hose problems—not a makeshift.

In mines, mills, foundries, shipyards, railways, and a hundred other industries, all over Canada, it is setting new standards.

There is a Goodyear Industrial Hose for every particular use—yours among them. Let a man, trained by Goodyear in hose problems, call and explain them to you. No obligation. Phone, wire or write the nearest branch.

Would You Spend \$575 to Save \$2,000?

Last Fall a certain lumber concern in Ontario purchased a small 10 H.P. Double Drum Belt Driven Hoist from us for handling logs. This machine cost them \$550, plus \$25, freight, total \$575. They operated this small Hoist by a belt from a gasoline Engine, the whole making a light, compact, portable outfit, easily moved from place to place.

They were able to work this outfit in the coldest weather, and found that it did the work of three or four teams.

As it required only one man to operate the Hoist, it is easy to figure the daily saving effected by the use of this machine. In other words, compare the wages and board of one man and the cost of a little gasoline with the wages and board of four drivers and the feed and upkeep of eight horses.

This machine handled up to one thousand logs per day.

We make these machines for either Steam or Gasoline Power, and in 7 sizes, one of which should be just right for your use.

GOODHUE BELTING

FACTORY TO YOUR MILL

TO the saw mill and woodworking industries we offer an unusually good belting value in our "Acme Waterproof." This belting is specially made from the best hides to run in wet places where only the best quality belt can "make good." If you require any belting you should enquire into the merits of "Goodhue Belts," then you will buy a "Goodhue." According to the conditions under which the belt has to run, we recommend "Extra," "Standard" or "Acme Waterproof"—each brand the best quality, but each made for a different service

DISSTON-SAWS

THE BEST KNOWN SAW IN THE WORLD

Each year finds a greater number of leading mills using Disston Saws exclusively. Mill operators know that the success of their mill—the quality and quantity of lumber they turn out—depends on the saw they use.

It is natural, therefore, for them to choose Disston Saws—the acknowledged standard in quality for 80 years.

How They do it in Wisconsin

As installed in plant of
Rogers-Ruger Lumber Co.,
Superior, Wisconsin

The Yates No. 177 Double Surfacers

is used extensively by Wisconsin manufacturers in making many well-known wood products, as it is in many of the leading establishments throughout the world.

The reason for its popularity is that the No. 177 always makes good.

This machine is sturdily constructed for long service and will handle stock from capacity down to a fraction of an inch in thickness with economy and dispatch. Equipped with round heads and Yates improved grinding and jointing devices, the No. 177 will give fine finish at the fastest rates of feed.

Our free, illustrated circular gives detailed information regarding its many features. This will be sent to you on request.

Laboratory Tests Determine *the*

Complete Process in Making ATKINS STERLING QUALITY SAWS

TO avoid variation, every step in the manufacture of Atkins Sterling Quality Saws is planned by our Chemical and Metallurgical Engineers. Scientific exactness governs each operation.

The result is a product of mathematical correctness, of scientific perfection which quickly manifests itself when Atkins Saws are put to the final test in bush and mill. Indeed, it is not by mere chance that the Atkins saw of your choice shows such cutting power, and its edge such endurance, because you will find unvarying dependability in **every** tool that leaves our hands—a dependability that comprehends the utmost in saw service for the up-to-date lumberman. Always put your dependence upon ATKINS.

Adams Pointers

Made at Penetang, these powerful and efficient gasolene boats are giving satisfaction all over Canada.

Lumbermen will find it quicker and cheaper to work with an Adams Pointer. It is easier and safer to use than alligators and tugs.

The Adams Pointer has a well-built, easy running engine, and powerful and reverse gear towing winch, and will prove equal to the heaviest work.

Get further particulars and blue prints, which give in detail the points wherein our Pointers excel.

Adams Engine Co., Penetang, Ont.
J. T. PAYETTE, Proprietor

The Machine That Made a Record in a Recent Lath Cutting, 10 Hour Test

Four Hundred Sawmills in the Dominion are to-day using this machine.

It has all the latest improvements and for quick, clean work has no equal.

The Payette No. 1 Bolter will cut, count, tie and pile 128,350 laths in a period of ten hours. The above consisted of 4 foot laths, 1½ by ¾ inches, and constitutes a record in rapid lath cutting.

If you are not using a Payette No. 1 Bolter you should be.

Shall we send you full particulars and prices?

Bell Locomotive

*The Marvel
Of Tractive Power*

Economical for Hauling Heavy Timbers

*Operated on
Cheap Fuel*

Several of the most extensive Canadian operators have proven the value of this little giant. It has been found most economical from the standpoint of fuel, and soon saves its initial cost by its great power and adaptability to all work.

We will be pleased to give you prices and particulars regarding our geared, oil-burning Locomotives. We shall also tell you where you may see them in efficient operation in the lumber industry.

Sizes 2 to 24 Tons.

LUMBERMEN'S

EQUIPMENT

Log Deck Equipment

Long's Stationary Cylinder Steam Nigger possesses all the best qualities of the oscillating type in addition to its own particular features.

The cylinders are made of close-grained grey iron, extra heavy to allow for reborring.

The valves are bolted to the cylinders on a "ground joint" which is perfectly steam tight, not requiring packing.

Piston heads are provided with extra wide double rings, having steam lap joints. The head is attached to piston rod, on a taper fit, pressed solid against a shoulder on the upper side and held by a large nut with split pin, to prevent nut from coming loose. The rods are made of steel and are of large diameter.

These and many other improvements which characterize every part of the machine have made it a favorite among mill men all over Canada.

Write for catalogue, or let us send plans and specifications for your equipment.

The E. Long Manufacturing Co., Limited
Orillia Canada

Waterous Boilers

Are Best for Sawmill Use

To get the full steam value out of the fuel you burn install Waterous Return Tubular Boilers. It will pay you for these reasons:—

They are economical of fuel—they carry plenty of steam in reserve for use in emergencies—they can be used with hard and dirty water—they are easily cleaned and readily taken care of.

Furthermore, we build various styles of boiler settings that are dimensioned and designed to best handle the various fuels used in the sawmill. Whatever kind you use, we will install your boiler to give you the highest possible efficiency and most perfect combustion with it.

We build and carry in stock Return Tubular Boilers up to 72" x 18". If we cannot supply you at once from our yards we can turn out your order in quick time. Ask us for prices on the next boiler you buy.

We build complete Power Plant Equipment for every installation—Catalogs and Prices on request

American Woodworking Machinery Co.

Rochester, N.Y.

LONDON AGENTS—THE PROJECTILE CO.

American No. 77A—Model 5

Mr. LUMBERMAN:

Has your Superintendent or Foreman suggested or insisted upon the need of a fast feed matcher in your mill?

If so, have you investigated the qualities of "AMERICAN MACHINES"?

We suggest that you write to any of the following—All users and SATISFIED:—

T. H. Hancock ... Toronto.
Wm. Copping ... Joliette, Que.
Ladder Lake Lumber Co. ... Ladder Lake.
Prince Albert Lumber Co. ... Prince Albert, Sask.
W. C. Edwards Lumber Co. ... Ottawa, Ont.
Finger Lumber Co. ... The Pas, Man.
Can. Puget Sound Lbr. Co. ... Victoria, B.C.
Canadian Western Lumber Co. Fraser Mills, B.C.

Adams River Lumber Co. ... Chase, B.C.
Giscome Lumber Co. ... Giscome, B.C.
Mundy Lumber Co. ... Three Valley, B.C.
Mickle Dymment ... Gravenhurst, Ont.
Mickle Dymment ... Toronto.
Fassett Lumber Co. ... Fassett, Que.
Jas. La Francois Co. ... Quebec, Que.

And then if you still have doubts, talk it over with our Mr. Garlock.

Its superior points will quickly convince you of the advantages of installing an "AMERICAN."

Phone: Harrison 8610-8611

Yards: ————— Cairo, Ill.

We all know that prices on lumber are high. What is the cause of it? Mostly lack of production on account of labor conditions caused by the war. Labor has not come back to its usual high class standard and on account of the high wages paid, less work is done by every man, so that the production of lumber in 1919 was 35% below the 1914 production, adding the normal increase of production of 5% a year; while, on the other hand, the consumption of lumber on account of the almost stand still of building during the war, has increased enormously.

There is no chance for lumber production to catch up this year and therefore, prices will continue high. We, therefore, advise you to buy lumber as you need it, without regard to price; and as no doubt, you only buy when you want it, you want to buy it from people who can deliver the lumber to you promptly. We can do this as we have over two million feet of CYPRESS in our Cairo yard and can ship it at a week's notice. Besides, we have large stocks in the south and cars in transit at all times that can be diverted to you.

When you want CYPRESS—which is the best value of lumber today, send us an order. We will fill it promptly.

Long-Bell Service to Dealers

It is the policy of The Long-Bell Lumber Company to co-operate with dealers in the sale of lumber and creosoted products. In other words, this manufacturer believes its obligation to the trade has not ended until the dealer has actually sold the lumber and creosoted products. To that end The Long-Bell Lumber Company provides selling assistance as follows:

NATIONAL ADVERTISING
 FREE ADVERTISING CUTS FOR DEALERS
 FREE METAL SIGNS FOR DEALERS
 FREE LANTERN SLIDES FOR DEALERS
 THE LONG-BELL BULLETIN

The National Advertising deals largely with the fact that products of this manufacturer may be distinguished by this trade marked brand:

Long-Bell
 THE MARK ON QUALITY
Lumber

The advertisements all carry this displayed line: "ASK YOUR DEALER FOR LONG-BELL BRAND." The Long-Bell Bulletin is a little monthly service paper containing merchandising ideas for lumbermen. Any Long-Bell salesman will put you on the mailing list.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.
Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice, at Buffalo, N. Y., under the Act of Congress of March 3rd, 1879.

Vol. 40 Toronto, March 1, 1920 No. 5

Greater Lumber Production is the Solution

At a time when greater production, a larger export trade and radical measures to correct the adverse exchange situation are being urged on all sides by public bodies, national trade associations, the daily press, banking institutions and other organizations, the air is rife with rumors that an embargo is about to be placed on lumber or, at least, its export considerably restricted. Whether such a move comes from the Board of Commerce or the Federal authorities, matters little and just how far the proposition is seriously entertained at the present time cannot be gauged.

During the present period of industrial unrest and readjustment any wild rumor may be set afloat and will gain considerable credence, while theorists, politicians, special interests and others are ready to proclaim sundry cure-alls for the prevailing high prices in every commodity which the people of the Dominion buy or consume. Now some contractors and others, it appears, have been unduly active in making representations to Ottawa, that Canadian producers of wood products are favoring American purchasers at the expense of Canadians and selling their stocks in too great quantities across the line in order to reap the advantage of being paid in American funds. They have even gone further and alleged that Americans are hoarding up their own supplies of lumber and corraling everything in sight on this side of the border, for which they are willing to pay a higher figure than can be obtained at home. It is also charged that if lumber cannot be obtained there will be stagnation in building operations, soldiers' settlement plans and various other undertakings.

The fact is overlooked that the shortage in lumber stocks is not applicable to Canada alone but such a condition is world wide; that lumber enjoys no protection but enters the markets of the world

in open competition not only in its own line but with all substitutes. The causes which have led up to the present acute situation in wood goods need not be reviewed as they are apparent and widely known to every one who has given any thought or study to the problem. During the war production was reduced each year and when the conflict terminated a sudden demand of unprecedented proportions set in which no one in the industry foresaw. Now that manufacturers are straining every nerve to increase production and, that too in the face of many obstacles such as rapidly rising costs, inefficient labor, etc., and endeavoring to relieve the situation, both at home and abroad, the proposed solution of the whole problem is federal regulation, control and interference.

At the recent convention of the Canadian Lumbermen's Association in Quebec the members thoroughly discussed the situation and passed a strong resolution that, in view of the disparity between the exports and imports of the Dominion and the resulting effects upon the value of Canadian currency in American exchange, every effort should be put forth to increase the exports of all classes of materials, whether manufactured or the natural products of the forest, farm, mines or fisheries.

This is the only economic solution of the great financial issues which the country has to meet and, for the federal authorities, to place restrictions upon the export of lumber, when Canada can utilize only a comparatively small portion of her annual cut, will result disastrously to the expansion of the lumber industry and kill enterprise and initiative on the part it is seeking to measure up to in satisfying the demand.

The federal authorities for years placed an embargo on newsprint and the result has been that the price of that commodity has increased four fold since the regulation went into effect, while the order has been openly defied and is now being fought out in the courts by firms who maintain that they have the right to market their goods wherever they please.

There has been no profiteering on the part of Canadian lumbermen; they are not favoring United States customers at the expense of Canadians, and no charge of discrimination has been established. The lumbering business does not differ in any respect from any other business. The price of the product depends upon the cost of production and whether values rise or fall, demand and supply will automatically adjust this state of affairs. This is a fundamental law of economics and why should lumber and newsprint activities be singled out for exceptional treatment? A policy of interference and restraint will only add to the complexity of the whole situation and invite reprisals for there are certain woods which Canada must import from the United States and certain others which the United States must obtain from Canada such as our maple and birch. Enlarged production will sooner or later relieve the present shortage so far as the supply of lumber is concerned. The desired end will not be attained by repressive measures, unwarranted meddling, arbitrary control, and placing artificial barriers upon a commodity which is required in every land to a degree never known in the history of the world.

Receipts from U. S. national forests in the fiscal year 1919 were greater by \$783,484.79 than in the previous year. This is the largest increase ever made in a single year. The receipts totalled \$4,358,414.86.

To this total the grazing business contributed \$2,609,169.85, the timber business \$1,540,099.96, special uses (i.e., the occupancy of lands for miscellaneous purposes), \$136,822.99, and use for water-power development, \$72,322.06. The receipts from grazing exceeded those of 1918 by \$883,347.91, while the receipts from timber declined \$93,549.46. Special uses showed a gain of \$15,616.05, and water power a falling off of \$21,645.29.

The falling off in the receipts from timber was not due to any material reduction in the current timber sale business, but chiefly because in 1918 settlement was secured under a court judgment of a claim against one of the transcontinental railroad companies amounting, with interest, to \$89,264.

Why Lumber Quotations are so Stiff To-day

The Primary Cause for Higher Price Levels is Increased Cost of Manufacture, Added Stumpage, Expensive Hauling and Exalted Wages of Men

Why is lumber so dear? Why should it go up in price and be so scarce? The public are asking this and many other questions and vague, unsatisfactory answers are given in a large number of instances. A propaganda campaign is generally a paying investment if well conducted and instructive. A certain Iowa firm of retail lumbermen believe in educating the people and giving data on what causes the abnormal prices for forest products.

This concern have been publishing a series of talks and they are remarkably good ones too.

The observations made respecting timber, cutting methods; stumpage, haulage and other vital problems largely apply to the present state of affairs in the Eastern and Western provinces of Canada. In fact so closely do conditions parallel that all connected with the industry will appreciate the many strong points raised. It always pays to be frank, straightforward and open in business deals and publicity and the Iowa firm for their candour and thoughtfulness in seeking to throw light on a perplexing situation have no doubt added to their prestige in the community, their weight in the business world and the goodwill of their patrons. Canadian yardmen might well follow similar methods. Here is the advt.:-

Lumber Prices—Manufacturing Costs

The strong demand from every section for lumber has influenced present prices no doubt, but the primary reason for the higher price level is the increased cost of manufacturing.

Stumpage or standing timber a few years ago had but little if any value, for the supply was so great and demand so small that there were no buyers. Thousands of acres were offered at \$2.50 an acre with few takers. As the middle west settled up and a demand for lumber came, stumpage began to have a small value, and with increasing demand for lumber, and the dwindling forest supply, stumpage has increased steadily from year to year. There is a carrying charge on stumpage much greater than is ordinarily believed to be we are sure. Before a sawmill company can logically erect a plant it must have fifteen to twenty years' timber supply back of it to insure operations. There is a constant carrying charge on this timber. For instance, if timber costs to-day \$5.00, in ten years, with interest and taxes and forest patrol, it becomes \$12.87 timber, allowing but 10 percent for patrolling, taxes and interest, leaving but 6 percent for interest, no more than is paid on a first class Iowa farm loan. The Iowa farm loan is safe, the timber investment is unsafe, on account of forest fires. A bolt of lightning, which is the most prolific source of forest fires, may start a blaze, which before help can be gotten to the forest, develop into a fire which will consume thousands of acres, and ruin the holder. Timber cannot be insured against forest fires.

Logging expense is very much higher to-day than ever before, due to timber being farther from transportation, rougher logging ground, and higher wages, emphasis on the wages. Years ago when we had \$20.00 lumber, stumpage lay right alongside the railway, so the logging expense was very small. Today many mills are hauling logs over their own railway a distance of 30 miles, the roadbed constructed over the roughest land that lies out of doors, and built at a cost per mile equal to the finest roadbeds in the east. Bear in mind, too, that these logging railways have no other source of income, they are built expressly for hauling logs from forests to sawmills. Stumpage on level ground is gone, a sawmill operator looking for stumpage on level ground is like a man looking for a good pair of shoes for \$2.50. There is no such thing. The wise operator chose smooth ground, of course, as long as it was obtainable, but now our timber in the west comes from the sides and tops of high and rough mountains, and if the consumer could but see the ground off of which his lumber comes he would marvel at it being produced at the price it is.

Machinery and all mill supplies have advanced tremendously.

The Part that the Worker Plays

Years ago, in the old days, woodmen were plentiful, wages low, the lumber jack was a rover. Today he is a family man, a skilled and trained man. Steam power today supplies the power of the old-timer, the present man is employed for skill, and is paid well for such. In order to get the right kind of men to come to the woods and saw mills and bring their families it is necessary for the operating company to build houses, modern ones, too, supply a church and

pastor, schools; in fact, at every large plant there is a modern little city.

Up to a few years ago, except in a few items, fir lumber, which comes from Washington and Oregon, was not used, yellow pine was the common wood. Today the southern pine mills cannot begin to supply the demand, because so many of them have cut their timber and gone out of business. So we have to go to the forests of the west for our supply.

Now, logging costs in yellow pine forests are low compared with logging costs in the west, because southern pine is located on practically level ground; wages are lower in the south than in the west, and freight rates are only half from the south that they are from the west. Yellow pine mills can make big profit at present prices, on account of lower manufacturing costs as outlined and much lower freight rates. The average pine mill is about 600 miles away, the coast mills 2,500 miles. So it is plain to be seen that in a few years we must expect all of our lumber supply from the west, and when we get it from such a distance, and when manufacturing costs have risen to such an extent, we cannot expect lumber to be sold at the prices that prevailed years ago.

Whalen Company Wants Daily Ferry Service

Sir George Bury, President of the Whalen Pulp and Paper Mills, Ltd., Vancouver, with Mr. E. I. Madigan, the general auditor, recently made a tour of the company's mills in the northern part of British Columbia.

During this tour the new car ferry service from the Swanson Bay mill to Prince Rupert was inaugurated by the Grand Trunk Pacific. This car ferry will take nine cars each time and the run from Swanson to Prince Rupert will occupy about twenty-four hours. The Whalen Company is now endeavouring to have this ferry service such that they will be able to ship carloads every day. This service means that the company will be able to load pulp, lumber and shingles for railway carriage to the East direct from the mills without any transfer at Prince Rupert. By this arrangement a great saving in time and money will be made. Under previous arrangements merchandise had to be handled two or three times before the final landing in the cars.

Under the system which is now being inaugurated there will be the one handling. A great many of these car load shipments will consist of lumber and shingles as the large part of the pulp output from the different mills is destined for the Orient, principally Japan.

Clarke Bros. Are Increasing Their Output

A. G. McIntyre, president and general manager of Clarke Bros. Ltd., Bear River, N. S., was in Toronto recently on business. The company are erecting a sulphate pulp mill of 10,000 tons annual capacity on which good progress is being made although, owing to the extreme cold weather, construction has been shut down for the present. It will be resumed, however, in the near future and, it is expected, that all the equipment will be installed and in operation early in the fall. The plant will contain three digesters and all the latest installations in the way of wet machines, a recovery system, shipping facilities, etc.

Clarke Bros. have recently been adding considerably to their sawmill undertakings and have completed a new plant at Victoria Bridge four miles from Bear River, N.S. The mill will have a capacity of 50,000 feet a day of softwoods. At Stillwater, nine miles from Bear River, one of the company's mills has been overhauled and brought up-to-date with the result that the cutting capacity is now 30,000 ft. At Lake Joly is located their hardwood mill. This is now equipped with two single cut band saws, with ball bearings, of the Fay & Egan type, and two gangs of men are operating. The new installations and addition to the working force will result in Clarke Bros. will quadruple their output of hardwoods this season. The new mill at Victoria Bridge is now in operation and working admirably. The company are conducting five camps this winter and also have a large number of jobbers taking out logs for them, so that the cut for 1920 will be considerably ahead of any during the past few years.

Returned Soldiers Make Good Lumbermen

Enterprising Northern Ontario Firm Gives the Boys Chance and has no Foreigners in Camp—Overseas Men Who Know How to Deal with Reconstruction

"Yes, we believe in giving the returned soldier preference in our operations, all other things being equal, and we have found in the great majority of instances that they have made and are making good. We are returned men ourselves and know the sacrifices that many of the boys have made and the great service that they rendered to the Empire during the late war, not a few of them giving up splendid positions to go to the front. All the members of our firm saw service overseas as well as did our walking boss, Major P. L. Bonsall, our accountant, Lieut. E. P. Whaley, our foreman, A. A. Gallagher, our timekeepers, Messrs. Hay, Barry and Cunningham, our scaler, Samuel Bailey, and fully seventy-five per cent. of our men, who are now engaged with us in either sawmill or logging operations. We have two camps of about one hundred men each and another of one hundred and fifty men and have the contract for taking out 250,000 ties this year for the Canadian National Railways. We do not claim any special honor or praise for giving employment to so many returned men but think that we are doing what is fair and just by them and affording them an opportunity

McFadden of McFadden and Malloy, Spragge, Ont. Major Herron, who commanded one of the companies, is also a practical lumberman, who started as a lumberjack and finally became camp foreman. He later took out a large quantity of logs for J. R. Booth in the Temiskaming district and was for a couple of years in charge of the logging operations of the Rideau Lumber Co., Ottawa, in the same district. Major Herron next took several large contracts for supplying the piling, trestle and bridge timbers for the Canadian Transcontinental, the T. and N. O., the C. P. R. and C. N. R. in the northern portions of Ontario.

How "Soldiers Saw Mill" Began

Messrs. Martin, Herron and Gillies, after the close of the war, had a number of conferences regarding what they would turn their hand to on their return to Canada and gradually the idea of carrying on an extensive lumbering operation, which would afford employment to a large number of returned soldiers, took shape. Major Herron was the first to reach Canada in March last and, being familiar with the Northern country, he was not long in betaking himself to that district. He went up there to look over some township limits belonging to the Ontario government and generally survey the situation. He found that Wright Bros., of Thessalon, were operating a portable sawmill 140 miles west of Sudbury in Penharwood township and had a contract for taking out ties for the Canadian government railway. They had also bought the timber in the township at a public sale in 1918 conducted by the Crown Lands Dept. Mr. Herron purchased their equipment and timber rights and soon after the firm of R. B. Herron & Co. was formed.

The Kent-Cooper sawmill at Collingwood, Ont., was acquired and removing the equipment to Tionaga, mileage 125, on the C. N. R. was begun. This was also accomplished in record time. On July 12th last the mill was bought and two days later the work of shipping the machinery began. By October 1st of the same year the plant had been set up at Tionaga and sawing commenced. This is a distance of about 350 miles from the original site. The mill possesses a circular saw and carriage with gun shot feed, steam nigger and kicker, bevel gear live rolls, double edger, trimmers, butting saw and complete lath mill equipment. The cutting capacity is about 40,000 feet a day and the timber sawn is principally jack-pine. The work of running the mill was continued until the freeze up in the fall and operations will be resumed early in the coming spring. The company are also operating a well equipped portable mill at Mileage 122½ on the C. N. R. cutting on an average of 800 jack pine ties daily. This mill is run by a 70 h.p. engine and 80 h.p. locomotive type of boiler with excellent results. It is the intention of the company to establish another operation at Knat river, near by. A contract for supplying the Canadian National Railways with 250,000 ties during the present year will be carried out. Three camps have been set up and good progress is being made in logging.

Each Man Fitted for the Task

Up north, the operations of R. B. Herron & Co. have become known as the "soldiers' sawmill" and the returned boys are doing good work. Each man is set at whatever task he is best fitted for and is given every encouragement and opportunity. The great majority of them are measuring up to requirements and appear anxious and willing to do their very best. The proprietors being returned men themselves have a thorough acquaintance of what the boys can do and do not expect anything unreasonable. Very few veterans have been released and all seem glad of the chance to work in the open as they find the atmosphere and surroundings bracing and helpful. Those who are not able to wield an axe or a saw find employment in the cook house or around the camp at good wages. There are no complaints heard regarding the board or the accommodation and when the mill at Tionaga resumes in the spring it will be practically manned by returned soldiers.

In speaking to the "Canada Lumberman," Major Herron said that his firm were simply "doing their bit" in the reconstruction and readjustment problem and enabling all that they could employ to solve the same question. Instead of waiting around for something to turn up when they got back to Canada, he and his associates had gone about the work of turning up something and had lost no time. The success they have met with so far has not been disappointing and the future appears promising.

Major R. B. Herron,
Toronto, Ont.

Capt. J. P. Gillies, M.C.,
Blind River, Ont.

to return to civil duties and become repatriated, by providing jobs in the open air and at fair wages. We instruct our own representatives and the various employment agencies to make full inquiries when hiring labor for the woods and see that the veterans of the great war are given first consideration."

So spoke Major R. B. Herron of Toronto, a member of R. B. Herron & Co., who are conducting extensive sawmill, logging and railway tie operations at Tionaga, which is 125 miles west of Sudbury on the Canadian National Railway. His associates in the firm are Lieut.-Col. T. L. Martin, D.S.O., of Renfrew, Ont., and Capt. J. P. Gillies, M.C., of Blind River. They were all members of the 7th Battalion, Canadian Railway Troops, organized and recruited in the early months of 1917. From the time that official sanction was given at Ottawa for the raising of the corps until they were laying light rails in the Ypres salient in Belgium was a little over three months and they continued work until the close of hostilities. The members came from all parts of Canada between Port Arthur and Halifax. On January 11th, 1917, recruiting commenced under Lieut.-Col. Martin, the Officer Commanding, who is a well-known railway contractor and engineer. The battalion was mobilized on February 11th, set sail from St. John, N.B., on the 16th of the same month, landed in England on the 27th, left for France thirty days later, arrived there on the 29th March and on the 4th of April railway construction was begun. This shows how good Canadians can hustle and the Canadian Railway troops in the matter of expeditious organization and execution beat all world records in this branch of military service.

Captain J. P. Gillies enlisted with the 227th Battalion at Sault Ste. Marie but was later transferred to the 7th C. R. T. He has spent all his life in the lumbering game and is a nephew of J. J.

More Rational Basis and Stability in Prices

Something Should Be Done To Solidify Values, Remove Speculation and Bring About Mutual Basis—Process Should Be Gradual But Certain in Lumber Arena

In this discussion of the lumber market it is not our purpose to criticise any branch of the industry, nor to find fault with the present prices of lumber any more than with prices of other commodities. There is no reason why lumber value should not change proportionately with changes in values of other staple commodities—in fact any other eventuality would mean disaster, says "The Retail Lumberman" of Kansas City, Mo.

As a matter of fact lumber was very slow to respond to the forces that put prices on the upward movement, and even now lumber prices are very reasonable for most other commodities, especially the general run of farm products.

But, notwithstanding the comparative reasonableness of lumber prices, the present situation presents a very interesting study.

In retail lumber circles there is grave apprehension as to the ability of retail dealers to finance their business unless there is a definite halt in the upward trend of prices. For instance, we have heard that the majority of dealers in the smaller towns did not make enough money during 1919 to pay for one car of lumber.

On the face of it, that may seem like an absurd statement. At the least it is startling, if true. Let us analyze it. A car of common lumber today will cost the dealer \$1,500.00 or better. One dealer paid \$2,700.00 for a car containing drop siding and shingles. Mixed cars of yard stock run as high as \$3,500.00 to \$5,000.00. The average small town yard does not make over \$150.00 to \$200.00 net, per car. Exceptions must be made in the case of towns that are having booms—oil, gas, or otherwise.

What is Average Dealer Earning?

It would seem, therefore, that there is reason for the statement that the average dealer did not earn enough in 1919 to pay for a car of lumber.

Will the small town dealer be able to remain in business, and what would be the effect on the lumber industry if the small yards are forced to quit?

We have always maintained that it is vitally important to make it easy for people to GET lumber. On this theory the small town yard is a most important factor in the industry. Lumber cannot properly be placed in the class of necessities. Lumber is a necessity in the general sense, but in an additional sense it is not. For instance, a farmer is living in a house that has been standing for twenty-five or thirty years. It is in a more or less dilapidated condition, and in fact should be replaced by a new, modern farm dwelling. BUT, that house CAN be made to serve for several years longer. The same is true of barns, outhouses and other farm improvements. On the latter theory, then, lumber enters the class of luxuries—something people want; and should have, but something that they can get along without for a more or less indefinite period.

If, by reason of continued increase in values, building is discouraged, or because the small town yards find it impossible to finance their operations and are forced out of business, and people are compelled to go a long distance to the larger markets for their supplies, the use of lumber will be substantially curtailed. This eventually would be disastrous for retailer and manufacturer alike, and every effort possible should be made to avert it.

We do not believe that manufacturers, as a class, are to blame for the present market condition any more than any other factor in the industry, because we have heard many representative manufacturers deplore the conditions that now exist. It would seem that the manufacturers, as well as the retailers, are the victims of influences over which they have little if any control. At the same time, if corrective influences can be brought to bear no time should be lost or effort spared to accomplish this.

Lack of Price Stability is Risky

Perhaps one of the most dangerous phases pertaining to the market at present is the almost total lack of stability of prices. Consumers who want to build may go to their dealers for prices, only to be told that prices named are good for five days, or ten days, as the case may be. The dealers must protect themselves in that manner because they have no assurance that if they promise to supply material for a building, for delivery within thirty days, they can buy that material at wholesale prices prevailing at the time they make their estimate, in case they do not have the stock, or a sub-

stantial portion of it already in their yard. Five days or ten days do not allow time enough for the consumer to make his arrangements to build. So we have in this another influence the tendency of which is to discourage building.

Dealers are looking forward to the time when the reaction in prices will set in. They are afraid of being caught with large stocks on hand that were purchased on the peak of the market. To avoid this, they are trying to regulate their buying according to their immediate requirements, which, under the circumstances, would seem to be the logical course. It would be a catastrophe if lumber prices were to decline sharply, or in trade parlance, "take a slump." In fact, as we view the situation, and we include in this all values, wages as well as commodity prices, everything should move together, gradually. Any other process means industrial and commercial disaster.

All Must Recede in Concurrence

Lumber values must not, and as a matter of fact cannot, recede until wages and prices of other commodities recede concurrently. In our judgment the most necessary thing to-day in the industrial world, is to educate labor to understand that commodity prices—which mean the cost of living—cannot be substantially lowered unless wages, which constitute the major element of the cost of production, are reduced. Such reduction must be gradual in order to prevent upsetting the balance between the incomes of the working men and living costs. If such a process of education can be put into operation and made effective, it will be possible, we believe, to maintain the balance between incomes and living costs, and thus gradually reach a more reasonable price basis as applying to all commodities, including lumber and building materials of all kinds.

But—SOMETHING ought to be done, and done NOW to start things back to a more rational basis.

WHAT IS that "something"?

How can it be started?

WHO will lead the way?

Eastern Firm Will Have Big Cut

Chappell Bros., Sydney, N. S., report that the timber cut for this season exceeds by far that of previous years.

Operations are being conducted by the firm this year in the Sydney River district and in Cumberland county. The total cut is both districts so far has reached about two million feet and if favorable weather continues it is expected that the four million mark will easily be attained. Conditions during the past two months have been almost perfect both for hauling and for cutting and indications are that no trouble will be experienced this year in removing the timber cut from the woods.

Reports from the woodsmen of Victoria County are also very favorable and a large cut is expected there.

Will Build Extensive Telephone Lines

Four hundred miles of telephone lines are to be laid through the forests of the upper Ottawa district as part of the scheme of the Ottawa River Forest Protective Association for the prevention of forest fires. The decision to proceed with the construction of 200 miles of these lines at once was reached at the annual meeting of that organization, which convened in Ottawa recently.

Arthur H. Graham, chief fire inspector, stated that last season was one of the worst for forest fires in many years. He said 20,000 acres, or 31 square miles of valuable forest were destroyed by fire started from lunch fires, careless smoking by campers, travellers and berry pickers, and slash burning without fire rangers permit.

Britain Will Issue Housing Bonds

At a recent conference held in Downing Street, London, Eng, the Premier and the Chancellor of the Exchequer and a deputation of mayors from the Provincial boroughs, discussed the housing problem. It was decided that there should be a simultaneous issue of housing bonds at an agreed rate of interest by the various authorities throughout the kingdom for the erection of houses.

Is Camp "Jumping" Professional Business?

How Certain Lumberjacks Are Taking Advantage of Logging Companies, Hampering Work and Adding Fresh Fuel Daily to Flame of Discontent

"After an extended trip throughout all parts of the province during which I visited many logging camps, I have been able to size up production conditions for the coming year. I estimate that the increased cut of white pine in Ontario will be about thirty-five per cent. over that of 1919, hemlock twenty per cent. and Norway pine and spruce about the same as during the past season," remarked a well-known Toronto lumberman, recently. "Operating conditions have on the whole been fairly good and, while there is too much snow in some centres, and better progress might have been made with road-making provided there had been the usual January thaw, there is on the whole little to complain of, except in regard to labor. Hauling the logs to the streams from the skidways is now going on. Some firms are still cutting and putting the sticks of timber on skids."

Continuing, he said that he had been visiting the camps for many years and never saw the men so comfortably housed, well fed, and cared for as during the past season. There are few complaints on this score but, on the other hand, the restlessness of labor and its inefficiency are everywhere commented upon. The speaker added that there were more camp "jumpers" than ever. He was, during the past few days, supervising the loading of some twenty odd cars of lumber in the Sudbury district. The material consisted of 1 x 11 and 3 x 11 white and Norway pine. Application was made to an employment agency at Sudbury to send up a number of loaders and up they came. Three gangs of six men each were required for the work of loading three cars a day and the pay was three dollars a day of nine hours, transportation, board and lodging. Some of the men did not go on the job at all, but turned around and went back by the next train; others labored only an hour or two and then quickly disappeared. The change in the personnel of the gangs averaged two gangs a day and one day all the members ceased piling, dropping out one by one. No cause was given for the sudden change of mind on their part. The disposition seemed to be how soon all could quit the job.

Constantly Going Back and Forth

"Just to give you an example of the way these 'jumpers' are meandering up and down the railway lines," he continued, "I got on the train at Sudbury the other day to go a distance of 125 miles. There were men enough to fill two cars and part of a third coach. At the end of my journey the laborers had all been distributed. The next day I returned to Sudbury and, when I started, there were only two lumberjacks aboard, but before the train reached Sudbury there were three car loads returning from the camps, and that too when work is now at the most active period and wages never as high as they are at present.

"The discontent is simply awful and operators all experience the same trouble. One company recently increased the wages of its helpers to eighty dollars a month in an effort to try and hold them, but with little success. Now how long is this state of affairs going to be permitted? It seems to me that something should be done either by concerted action on the part of the lumbermen or by federal regulation. I heard it rumored that some employment agents, who get two dollars per head from the companies for each man sent out, are clandestinely fostering the 'jumping' business by sending the men out, with the secret understanding that they are to return the next day or as soon thereafter as possible. One or two agencies are said to collect the two dollars per head from the logging and lumbering companies for engaging the men and then divy up with the 'jumpers,' who do no work but travel up and down at the expense of the firms. How true this charge is, I cannot say.

"No, it does not seem to be a matter of wages. That will not cure the present evil which has become very pronounced. I heard of one concern, which placed its men on piece work in the woods for cutting logs and putting them on the skids. The men, who worked in twos and threes and applied themselves diligently for a while, earned as high as \$180 a month, and yet were not satisfied. Several quit at the close of the month. The Bolsheviks, the One Big Union, the Reds, the I. W. W. and other cults appear to be quietly but effectively getting in their nefarious work.

Concerted Action Should be Taken

"If some united action were taken by the lumbermen so that there would be a pay day only once a week and that no man, even if he did quit before, could draw his cash until the end of the week,

there might be some mitigation of the trouble. As it is, when these chaps apply for their time, furnishing no excuse at all for leaving, they are handed out what money they have made right on the spot and then depart for pastures new. Some employers are too ready to give such fellows their pay. The 'jumpers' used to complain of the board, the wages, the sleeping accommodation and other things, but there are no grievances on this score now. It is simply pure cussedness, chaos, anarchy, confusion, restlessness and inefficiency all rolled into something, which should be checked in the interest of law and order, progress and expansion of the industry at a time when greater production of forest products is urgently needed and there is not nearly enough lumber to go around. Up and down the country these men go, laboring only a few hours at most and then back to town, only to be sent out again and entailing losses and delays on the part of the companies in cutting, skidding, hauling and shipping. The last few weeks have been the worst ever."

All Logging Camps on Open Shop Basis

The logging camps of British Columbia are now all worked on an open shop basis, the arrangement having recently gone into effect. Practically every member of the B. C. Logging Association signed the agreement which has been posted in all the camps and reads as follows:

The operators will hire their men through an employment office conducted by the B. C. Logging Association. There will be no discrimination in the matter of work. Union men and nonunion men will be engaged without any question as to their affiliations, it is said, but the camps will be "open" with work for all.

The following are the chief clauses of the notices to be posted at the logging camps:

"(1) No discrimination whatever will be made against any man, nor permitted to be made, on account of his citizenship, his political affiliation, his religious beliefs or his affiliation or non-affiliation with any lawful organization whatsoever.

"(2) The 'open shop' principle is adopted and will be maintained. This means that no discrimination will be shown either by employer or employee against any man who is law-abiding and who is capable and willing to fill his job.

"(3) Suggestions from employees will be welcomed at all times and will receive full consideration, but no suggestion or demand originating outside our own camp will be considered.

"(4) Men who do not honor and respect the laws and constituted authority of the Dominion of Canada and the Province of British Columbia and who are not ready to uphold such laws and authority at all times are not desired and will not be tolerated in the camps.

"(5) It is the wish and expectation of the management to work at all times in perfect harmony and goodfellowship with the men, and to meet them in a spirit of equity and fairness.

"(6) It is hoped that all employees will recognize the fairness of the foregoing principles and will give cheerful approval thereto, so that the relations between employer and employee will be those of real co-workers and result in accomplishments of which all may feel proud, and furthermore will be to the material betterment of all concerned."

Making Good Progress in Logging

Although late in starting operations the work at logging in the camps of the Eastern Lands Department of the Canadian National Railways at Foleyet, Ont., has been progressing favorably. Cyril T. Young, head of the department, estimates that the cut during the coming season at the mill at Foleyet will be six million feet. Samuel Lowe, late of Chew Bros., Midland, who was for some years in charge of logging for Glover and Casham when they operated in the Thessalon district, is now foreman of the camps of the C. N. R. and under his direction cutting has proceeded expeditiously. T. W. Crawford, late of Milnet, has been appointed superintendent of the C. N. R. mill at Foleyet, and entered upon his new duties.

Wholesalers Discuss Many Live Problems

Adjusting Disputes with Railways, Increase in Freight Rates, Data Desired by Board of Commerce and Market Situation Come Up for Consideration

At the regular monthly meeting of the Wholesale Lumber Dealers' Association, Inc., which was held at the Albany Club, Toronto, on February 20, there was a large attendance, thirty members being present while a number of new ones were welcomed. A. C. Manbert, the new Chairman, presided for the first time and a most interesting session was conducted at which a number of important matters came up for consideration and discussion.

The first item touched upon was that of the United States customs officials collecting a ten per cent. duty on maple exported from Canada, classing this material as a "cabinet wood." It appears that the customs regulations stipulate that maple not further manufactured than sawn comes under this head. The collection of the duty on maple was brought up at the last meeting. H. Boulton, secretary, read correspondence which he had had with Washington, the National Hardwood Lumber Association and other bodies in regard to the question. A. E. Eckardt reported that the matter had come before the Executive and they felt that it had better be left to stand for the time being as, if the proposition was pressed, it might be held that the same ruling which obtained with respect to maple might be applied to exports of birch across the line. It was decided, therefore, to leave the matter in abeyance.

Increase in Freight Rates Foreshadowed

Mr. Eckardt, chairman of the Transportation Committee, spoke in reference to the proposed increase in freight rates and said he understood that augmented rates had gone into effect already on certain roads across the border, amounting to a twenty-five per cent. advance. Such being the case a similar move was likely to be made in Canada and no doubt it would come suddenly—perhaps by federal regulation owing to so many thousand miles of line now being owned by the government. He did not believe that the lumbermen would have much chance in successfully fighting the increase but, at the same time, he thought they should ask for a hearing to go into certain matters and have them simplified, such as the minimum weights of cars, overcharges, etc., from which a great deal of trouble and misunderstanding arose with the transportation lines.

Mr. Manbert spoke along the same lines and said so far as his own firm was concerned, most of the claims against the railways were based on cars sold at a delivered price and the bulk of such complaints arose from overweights.

Standing Committees for Year Appointed

The Chairman reported that the standing committees for the year had been appointed and referred to the importance of the work which they had to do in their respective spheres of activity. The committees for 1920 are as follows, the first named in each case being the Chairman:

Transportation—A. E. Eckardt, D. C. Johnston, A. E. Clark.
Trade Relations—W. E. Bigwood, John McBean, Alex. Read.
Admission and Membership—A. G. Gordon, Alex. Gordon, Maurice Welsh.
Bureau of Information—H. G. McDermid, A. E. Cates, J. L. MacFarlane.
Fire and Marine Insurance—W. C. Laidlaw, G. E. Spragge, Guy H. Long.
Arbitration—J. P. Johnson, Alf. Read, R. G. Chesbro.
Legislation—Frank Kent, N. H. Hocken, J. L. Campbell.
Inspection—R. McDonagh, J. E. Littleton, K. M. Brown.
Audit and Finance—C. G. Anderson, Wm. A. Walker, R. F. Carter.
Terms of Sale—W. C. Gall, A. H. Leak, F. H. Bigwood.
Entertainment—A. K. Johnson, D. C. Johnston, D. Barclay.

Questionnaire of Board of Commerce

A. E. Eckardt brought up the matter of the recent order of the Board of Commerce, No. 37, in regard to building materials, in which it is set forth that before March 31st next all dealers in building material in Canada shall deliver to the secretary of the Board of Commerce at Ottawa, a statement showing the cost price to them of each article or class of building material being sold or offered for sale, with their selling price thereof to a contractor or other individual, for use in the building of houses and stating the dates as of which such cost and selling price is reported. The document went

on to state that certain vendors inferred because no personal service had been made upon them of the Board's order that compliance was unnecessary; that the information required was claimed to be insufficient to serve any practical purpose; that obeying such an order was burdensome and unnecessary as no unfair profits are being made. There has not been a general response. The Board declared notice had been published in the "Canada Gazette" for three weeks and that failure to comply would be a breach of the Act.

The order also stated that the object is to secure sufficient information to proceed intelligently with further and more extensive inquiries; that the proclamation must be obeyed and that all persons, who disregarded the order, would suffer appropriate statutory penalties. The order applies to and includes all producers and vendors, whether manufacturers, wholesalers, jobbers, retailers or otherwise, in foundation walls, plaster, rough and manufactured lumber, glass, paint, roofing, plumbing, hardware, kitchen necessities and sundries.

It was pointed out by several speakers at the meeting how many of the questions could not be answered and were incomplete and vague in character, considering the low stocks on hand, fluctuating prices, etc. The Secretary was instructed to bring the order before the Retailers' Association meeting in Hamilton and secure their opinion and the matter was referred to the Executive of the Wholesalers' Association for action and a report thereon at the next regular meeting.

The rumor in regard to the proposed embargo to be placed on lumber or restricting its export was touched upon incidentally and the opinion prevailed that the report was not to be taken too seriously and that there was no need for action.

The secretary was instructed to send resolutions of condolence from the Association to J. B. Jarvis in the death of his wife and to the family of the late John E. Eyer, who passed away a few days ago.

Scarcity of Lumber Stocks in West

A. S. Nicholson, who recently returned from the Coast where he spent nearly a year as western manager for Terry & Gordon and is now attached to the head office of the firm in Toronto, was given a warm welcome as a new member and congratulated on "graduating from the retail to the wholesale ranks," as the Chairman humorously expressed it. Mr. Nicholson related some of his experiences in the west and told of the changes that have taken place in the lumber business in British Columbia since his first visit there some fifteen years ago. He did not think there was any immediate prospect of a reduction in prices as logs which a year ago were selling at \$10, \$15 and \$20 were now commanding \$17, \$23 and \$28 with a premium on top of these figures and were very scarce. Mr. Nicholson told of his visit to the Queen Charlotte Islands where spruce was being taken out for aeroplanes by the Imperial Munitions Board and of the wasteful methods that had been followed in sawing and rafting by men who had no practical acquaintance with the lumber business. On Graham Island particularly the extravagance had been most noticeable.

R. G. Chesbro, who lately returned to Toronto from a trip to the Coast, was also called upon. He had visited a number of the mills and found stocks very low—about twenty-five per cent. of normal and the demand exceptionally keen. "The policy prevailing is not to take any orders except when a carload is on hand and that of green lumber when the lot is sold to the highest bidder," added Mr. Chesbro amid laughter. "I went west on a combined business and pleasure trip but the latter was about all I got out of it," he concluded.

The Situation Outlined in Britain

C. W. Wilkinson, of the Union Lumber Co., who returned some time ago from a visit to England, stated that conditions over there were very much the same in the lumber line as they were in Canada, except for large quantities of spruce which the British government held overseas and also on their purchases made in this country which had not yet been shipped. Out of the 700,000,000 feet bought in Canada a large portion of which had yet to be moved over the water. There was little white pine in the Old Country and not

a great deal to go across. All the lumber on hand in the Motherland has been used so far for manufacturing purposes and the house building campaign about which so much has been heard, had not yet got under way.

Mr. Manbert called attention to the methods and markings of Swedish manufacturers, their stocks being carefully sorted, graded, sized and put up. He thought as far as possible Canadian manufacturers might follow along these lines. Mr. Manbert referred to the expiration of the Business Profits Tax and called attention to the resolution, which had been passed at the convention of the Canadian Lumbermen's Association in Quebec city, to the effect that the tax be not reenacted as it had proved inequitable in principle and operation to individual initiative and enterprise. The convention had, however, approved of the continuance and extension of the income tax in conformity to the necessities of the government to meet its incurred obligations arising out of the war. All taxes, he added, should come out of earnings or increased increment and not out of capital. This was the only fair and equitable method. The levying of a tax based on the volume of business would penalize such industries as lumbering and bestow unfair privileges on other lines of manufacture where the turnover was smaller than in the lumber

business but the profits much larger. In the lumber line while the figures were large in volume, the percentage of profit was relatively much smaller than in many other enterprises.

Lieut. H. W. Larkin, of the Larkin Lumber Co., was welcomed as another new member of the association and spoke of some of his observations while overseas. He stated that the destruction to the forests of France during the war and particularly in the area around Lens was appalling. The forestry policy of that country was an admirable and progressive one and the cut was systematically undertaken. The annual harvest was equal only to the annual growth thus ensuring permanence and perpetuity to the wooded resources of the country.

Norman C. Hocken of the Hocken Lumber Co., Toronto, also added a few words in reference to present market conditions and outlook.

It was decided that, at the monthly meetings of the Associations, it would be advisable to hear outside speakers on important topics such as the exchange situation, the legality and proper form of contracts and other subjects closely allied to the lumber business. This, it was thought, would add to the interest and vary the character of the gatherings.

Bigger Output of Lumber to Meet Demand *How Can an Arbitrary Law or Federal Embargo Correct Situation Created by Conditions Over Which No Government or Body of Men Has Control*

By A. E. Clark, Toronto

So much publicity has been given to the present situation with regard to prices and shortage of lumber, that the subject seems worthy of some little review. To say that the lumber business is only following out the clear cut trail of nearly all other lines of business is not enough. Going back to pre-war conditions, lumber trade just prior to the declaration of war was verging on the edge of a very unhealthy condition. An almost complete cessation of building operations and the curtailment of all factory activities along regular lines still further reduced trade during the early months of the war. However the regular consumers of lumber must not lose sight of the fact that soon after the different countries were settled into the long drawn struggle, the demands on the country for all classes of material grew by leaps and bounds. Since the greater portion of these were exports, including shells and guns and were sent abroad, they had to be heavily crated. The natural result of such demands was that soon what had seemingly been a surplus supply of lumber was converted into shortage and that very largely without the knowledge of the regular consumer.

Facing Acute Labor Situation

Added to the difficulty of the huge demand, the lumber producer was soon faced with a very acute labor shortage as the class of labor used in woods operations was called into action through their fine physical condition to take their places both as regulars and in the forestry battalions. The men, who are to-day making such serious complaint about prices and shortages, must remember that lumber producers have never yet had the opportunity to build up their reserve supplies and, in fact, the present 1920 cut is the first year in which there was even the possibility of getting stock to normal. No one can gainsay the fact that prices are materially higher than pre-war prices but this true of all commodities, and in a comparison of prices, the consumer in fairness to Canadian lumbermen must not pick out Quartered Oak or some other product of the United States as a basis of comparison.

Prices of the true Canadian lumber products have advanced on a far less percentage basis than foodstuffs, wearing apparel, or almost any building commodity. What apparently is an acute shortage of supplies to-day cannot be ascribed to American purchases entirely, in fact, the American purchasers bear but a small portion of the blame. Canadians in building operations and in furniture and implement manufacturing have for some years used very large quantities of Southern Pine, Oak, White Ash, Gum and Poplar to the exclusion of our Canadian woods, which has naturally driven the Canadian manufacturer to find other markets for his product. These markets were found in our neighboring southern country and overseas.

Correcting the Exchange Situation

A short time ago the Government was helping us to get these markets and congratulating us on selling in these markets and aiding to correct a difficult exchange situation. But during the war period the United States lumberman has fallen into the same difficulties of production that have faced the Canadian and has no sur-

plus of supply to furnish Canada. As a result Canadian manufacturers come back and are ready to use Canadian lumber once more and in a few isolated cases are objecting to the situation they have found—that is, the Canadian manufacturer has more than an ample market and for the moment cannot relieve Mr. Consumer's difficulties who has flown back from his American source of supply and asked the Canadian producer to relieve him.

Coupled with this situation comes the fact that lumber supplies during war times were consumed in entirely different channels from pre-war periods. We are almost five years behind in our housing and repair problems. Is it fair or just to censure lumber producers for having fallen into a world-wide difficulty? With curtailment production and no reserve the lumberman cannot be expected to meet a five years' deferred demand. Given a reasonable amount of time and with an adequate labor supply, increased production should very soon correct the situation, but to talk embargoes and curtailment of markets only adds to the producer's difficulties by making him cautious about how far he extends his operations and adds new capital to increase production and help to relieve shortages.

During the past five years labor conditions have tended to reduce production through the lack of men. The cost of labor in lumber production has increased by an amount estimated to be about 260 per cent., whereas efficiency is estimated to be about 62 per cent. of normal. Stumpage values, ground rents and fire ranging costs have also advanced, until it can be said and proven that lumber prices to-day have not advanced in proportion to costs of labor,

New Form of Business Petition

So active is the paper business in Canada and so far behind are most of the mills in deliveries that a customer of one of the leading companies making book papers recently sent in the following petition which is headed "Form of Prayer to be used when ordering goods from Canadian mills":—

O Omnipotent, Arrogant and Unholy Monopoly: Thou who holdest the weak and long-suffering manufacturer in the hollow of Thine Almighty Hand, and dost crush out his very heart, nor yet carest so much as a Tinker's Damn for his sufferings: Vouchsafe to draw near, with as little scorn as possible, and attend to the pleadings of thy most unworthy servant, who now approacheth thine exalted Footstool with his miserable order.

Do not "turn it down" we beseech thee; we do not even dare to hope that it will be accepted in its entirety: but O Great Potentate, we plead with thee for at least 25% of it: we request delivery in June, but O, thou King of the Ananias Bunch, if thou wilt but ship it six months after, in December we shall wash thy holy feet with our joyful tears, and our children shall rise up and call thee blessed. Amen.

of flour, of oats, of meat or of the necessary camp and logging equipment. In British Columbia labor unrest and strikes have seriously hampered and curtailed log production and left the lumberman with a very inadequate supply of logs to take care of an ever-increasing demand for building materials.

How can an arbitrary law or embargo placed by the Government correct a situation created by conditions over which no Government or special body of men have control? Production of lumber is not carried on entirely by multimillionaires as a great deal of the product is placed on the market by smaller operators with a very limited capital at their disposal.

In regard to the allegation that stocks of lumber are being hoarded up in the United States, any statement to this effect is so preposterous that it is scarcely worth refuting. Lumber production in both the United States and Canada has fallen off steadily every year since the outbreak of the war and the sudden building boom, which set in last year, resulted in tremendous calls upon all stocks in hand for structural purposes. In Canada, for instance, during 1919 the total value of the permits in thirty-eight cities was \$73,684,453 while in 1918 the aggregate was only \$35,454,930. The same story applies to building operations in the United States where in 120 cities the entire expenditure in this line was \$1,170,773,197 and in 1918 returns from the same centres showed only \$372,793,978. The year 1919 was the busiest one in the building arena of any ever known across the border, the previous high record in these same cities being in 1909 when the permits issued reached \$888,114,741.

Should Not Hamper Increased Production

As costs of production mount the small producer's capital is such that he must reduce his production or increase his capital. The latter is often easier said than done. War profits tax has placed this man in such a position that the amount he can keep and add to his capital is small in comparison to the needs of the situation. Each man must make a living and if his quantity production is reduced and his living necessity increased, then this greater need must be supplied by a larger profit on the smaller production. The sooner the manufacturer is permitted to get back to putting all his effort into an increased production with all trade restrictions removed, the sooner we reach the goal of old business situations.

Retaliation is the natural reply to embargo, and should we find ourselves with an embargo on coal or steel or a number of the species of lumber needed in Canada but not produced here, we would possibly be in a much more serious condition. If half the energy were expended in speeding up our production and if half the paper used in discussing our difficulties were turned into discussions of plans and efforts for speeding up, our chaos would soon be converted into affluence.

Easterners Purchase Valuable Timber Land

"Geo. F. Goodspeed of Wilton Maine and Geo. M. Goding of Wilton Maine and Liverpool N. S. have recently purchased thirty six thousand acres of timberland in Queen's and Shelburne, Nova Scotia. They have also leased the rights to cut the timber from about twelve thousand acres of adjoining lands. The timber consists of about 80 per cent. pine and 20 per cent. spruce. There is also quite a lot of pulpwood.

The Canadian Government Railway runs through the property and also several rivers leading to the railroad and tide water. Mr. Goodspeed acquired three-fourths interest and Mr. Goding one-fourth interest in the company which was formerly owned and operated by the Sable Lumber Company."

Protecting Farm Machinery with Sheds

A. O. Fisher of Barrie, Ont., who is a member of the selling staff of the R. Laidlaw Lumber Co., Toronto, wrote the "Canada Lumberman" in a recent issue directing attention to the effective work that could be done by retail lumber dealers throughout the country during the winter months in calling upon their rural customers and urging them to erect proper buildings for the housing of their farm implements. Mr. Fisher stated that it was amazing the number of farmers who left their equipment out doors in all kinds of weather to rot and warp.

His excellent article has been reproduced in a number of Canadian papers and recently Mr. Fisher received a letter from the B. C. Forest Branch, Department of Lands, Victoria, congratulating him on the timeliness and thoughtfulness of his observations.

There has been issued by the latter department a neat, illustrated booklet entitled "Protect Your Farm Machinery," which is being widely distributed. The brochure states that an eight foot binder, which cost \$175 in 1913 costs \$270 today, and that housing a binder doubles its life and goes on to point out that an implement shed

will pay for itself in a few years and that a farmer cannot afford to not build an implement shed. Another expression is "Nature, which rolled out your fertile prairies also settled your lumber woods in British Columbia. British Columbia buys your wheat; buy British Columbia lumber."

Writing to the "Canada Lumberman", an eastern yardman, who has obtained several copies of the B. C. publication for distribution among his customers, states that the loss of farm machinery is evident to every one who travels both by car and train and the annual loss of millions of dollars is accounted for by the miscare which leaves the implements out in all kinds of weather and in the burning sun. The need of erecting implement sheds cannot receive too wide publicity.

Windsor Lumber Firm Acquire New Site

Walter T. Piggott, Windsor, Ont.

Erection of a million-dollar hotel by a syndicate composed largely of financiers from Jackson, Mich., and a few Windsor men will be undertaken at the corner of London street west and Dougal avenue, Windsor, Ont., on a site 105 feet by 402 feet, purchased recently from Walter T. Piggott by O. M. Mason of Jackson, Mich., representing the syndicate. A huge block of apartment houses will be constructed on the rear portion of the property, which fronts on Park street. The property has a frontage on London street west of 105 feet, running clear through to Park street, along the east side of Dougal avenue, having a frontage of 402 feet on the last named street. In connection with the sale of the site, Walter T. Piggott of Windsor, in a communication to the "Canada Lumberman" says: There will be no change in the personnel of the firm by the real estate deal that was closed recently but it will mean that we will be able to operate our business here to a great deal better advantage than we are operating it at present. We have been established here for over twenty-five years, purchasing the business from W. G. Nutson and assuming control in April 1894. Mr. Nutson was located on our present location for about twenty-five years before us, and our trade has expanded to such an extent that we have outgrown a whole half block in the down town district for our lumber yard and planing mill. The property has increased in value very much during the last twenty-five years so that the interest on the investment and the taxes made our cost to operate too much and when we had the opportunity to dispose of it at a good figure we embraced it. We are pleased to tell you that we have secured a sight on the Essex Terminal Railway which contains seven and one-half acres, where we will have our private siding and also our planing mill. We have until September 1st next to give up possession of our present property and will have our new plant in operation by that time. We will run our new plant by electrical power, and it will be one of the most up-to-date and modern in the country, with a first class dry-kiln in connection.

Walter T. Piggott has been in the lumber business all his life and has always taken an active part in the development of Windsor. He was born in Chatham and is a son of John Piggott, a veteran lumberman who retired some time ago after fifty years connection with the industry. Walter T. Piggott was for three years a member of the Chatham city council, and during that time was a member of the board of works and chairman of the industrial committee. He is a member of the Border chamber of commerce, the Retail Merchants' Association, the Oddfellows, the Windsor and Essex Golf and Country Club, the Elks and Transportation Clubs of Detroit, and the Builders' and Contractors' Association of Windsor, of which he was president during the year 1916. He is a director of the Windsor, Essex and Lake Shore railway, and in 1909 was managing director of the road. When Mr. Piggott was president of the Builders' and Contractors' Association he suggested the slogan, "Watch Windsor Grow."

Mrs. Johnson: "How does yo' feel dis mawnin', Joe?"

Mr. Johnson: "I feels bad—mighty bad! I wish dat Providence would have mussy on me an' take me."

Mrs. Johnson: "How can you expect it to ef you won't take de doctor's medicine?"

Retailers' Gathering Arouses Wide Interest

Splendid Reports Presented on Work—Hamilton Extends Unbounded Hospitality—

Progress Achieved All Along Line—New Officers Live and Resolutions

The second annual convention of the Ontario Retail Lumber Dealers' Association, which was held at the Royal Connaught Hotel, Hamilton, on Tuesday and Wednesday, February 24th and 25th, was one of the most successful, harmonious and progressive gatherings ever conducted by any organization of retailers.

The reports presented were all encouraging and optimistic. A lively interest was taken in the proceedings from the opening until the close at the highly-enjoyable banquet on Wednesday evening. The discussions were conducted on a high plane, and more generally participated in by the rank and file than during any previous assembly. Many matters of importance were dealt with in detail, and crystalized into resolutions which were adopted unanimously, and will result in a great forward movement on the part of the Association.

The attendance was very large, all portions of Ontario being represented, and the Hamilton members of the trade certainly left nothing undone to contribute to the welfare and comfort of the visitors.

PRESIDENT PATTERSON REVIEWS WORK OF PAST YEAR

President Thomas Patterson of Hamilton, presented an interesting and instructive report as follows:

It is a great pleasure to me to welcome you to Hamilton on the occasion of our third Annual Convention. Hamilton, as you all know, is one of the most active manufacturing centres in Canada and its consumption of lumber is very large. We feel that it is most fitting that the members of this Association should visit Hamilton for their meeting and we trust that before long we will again be honored by being selected as your hosts for the Annual Meeting.

I do not desire, on this occasion to burden you with a long President's address. I feel that it is my duty to lay before you simply something in the nature of a review of the most important matters that have come before our Association during the past year, and in connection with them to make such comment and recommendations as appear to be called for. From the Association point of view the year has been marked by an increasing tendency on the part of our members to make use of the services of the Association. The Association is being looked upon more and more as a business institution. During the first year of our existence as an association we had to deal to a great extent with problems of organization. Last year we were able to devote much of our time to matters of service and we trust that this will be increasingly the case in the future. Our Association is a business institution which must depend for its existence upon the services which it can render to the individual members.

General Objects of the Association

From our secretary's report you will learn the details of many matters which he has dealt with during the past year. It would not be right for me to take up your time by referring to them also, but I may be permitted to give expression to some of the conclusions which these matters have induced me to reach. In the first place I want to refer to the general objects which we have in mind and are attempting to carry out through our Association. Co-operation is our chief aim and purpose, and co-operation may be effected in many ways. Without co-operation we get only what is left over. With co-operation we get all that we are entitled to. Therefore, I believe that the time has come for us to consider the manner in which we are co-operating and how our co-operation can be rendered most effective. Generally speaking, our Association is made up of a large number of individual members who make use of the services of our central office in connection with a wide variety of their trade difficulties. Within the general Association we have local districts which have been organized to a greater or less degree as circumstances have permitted. Within these local districts we have a few local branches. No serious attempt has yet been made to carry out our plan for co-operation, to its logical conclusion by the formation of a series of local branches closely covering the whole of our territory, organized upon standard lines and furnishing the machinery for holding frequent local meetings to deal with local problems. I

believe that the most important matter we have before us to-day is the further organization of our Association along these lines.

The Value of Local Branches

Local branches which we have formed are pointing the way for the formation of others and proving the value of local as well as province-wide organization. I do not know what form of organization we should adopt for these local branches, but the matter should not be a difficult one to work out, and I would suggest, first of all, that it be discussed to-day and that a special committee be formed to submit a report upon it at the general meeting to-morrow. I am firmly convinced that the welfare, in fact the very existence of our Association, depends upon the successful formation of a large number of aggressive local branches. I would suggest that, in connection with the appointment of a committee on this subject, it be partly composed of members from those districts which have already formed local branches.

The next matter to which I wish to refer is the composition and the duties of our standing committees. We have standing committees on legislation and transportation, insurance and workmen's compensation, membership, trade relations, arbitration, and publication. During 1918 our secretary found it a very difficult matter to arrange for the appointment of local representatives on the committee on legislation and transportation and on the committee on insurance and workmen's compensation. It involved a large amount of correspondence before the committees were finally drawn up and appointed. During 1919, although he requested the district associations to appoint their representatives for these committees the matter was not attended to by the local associations and we were obliged to continue in existence the same committees as we had in 1918. This is not a satisfactory state of affairs. Either these committees do not appeal to the local members as of practical value or else the local associations do not take their responsibilities to the general association as seriously as they should. The other committees are arranged for differently and do not involve this difficulty. I would urge that we go into this subject very thoroughly and consider how we can best arrange for the creation each year of such effective committees as are required for the welfare of the Association. If necessary we can appoint a special committee to consider this matter and report to-morrow.

Should Not Neglect Work in Hand

I cannot impress upon the members of the Association too forcibly the necessity for going into the consideration of all these matters in a business like manner, and also the necessity for giving a business like consideration to the interests of the Association in regard to all its other work. Our secretary reports to me that during the past year he has found a regrettable disposition on the part of many of the members to neglect the Association work. On several occasions he has addressed circular letters to the members upon matters of direct and considerable importance to us and the response to these circulars has been practically nil. This is not as it should be. If our secretary's work and the services of the Association are of value to us get behind this thing and do some genuine co-operating. I do not believe there is one man in this room who does not appreciate the great importance of the work of the Association. Therefore, I believe that one of the most practical things I can say to you to-day is by way of advice, and that advice is: write as many letters as you can to the secretary and never fail to reply to his letters.

Creation of Traffic Department

I understand that the report of the Chairman of our Transportation Committee which will be presented to you to-day, will contain a most important recommendation regarding the creation of a Traffic Department by our Association. That a Traffic Department is a practical part of Association work, and can be made a very valuable part of our service, to our members, has been demonstrated very fully elsewhere. As our Association grows we should be able to plan and put into force other services of a similar nature. One at a time, however, is good fishing, and I hope that during this meeting, Mr. Barrett will be able to submit an outline of a proposed Traffic Department which will meet with your approval, and that in the very near future, we will be able to establish this service.

Trade Relations have been the subject of much of the work done

Thomas Patterson, Hamilton
Retiring President of Association

John B. Reid, Toronto
Newly-elected President of Association

E. M. Barrett, Ottawa
Newly-elected Vice-Pres., O.R.L.D.A.

Horace Boulton, Toronto
Secretary-Treasurer of O.R.L.D.A.

by our Association during the past year. The Secretary's report will give details of much of this work. The events of the past year in this connection bring us face to face with several delicate problems, to which I ask you to give careful consideration. Our great object in forming this Association, was to be able to present a united front to the various forces which are so continually working more or less in a direction contrary to the individual interests of our members. We have to consider to-day the problem of making our influence felt, so that unscrupulous wholesalers, manufacturers or jobbers will have a healthy respect for us and will realize that they cannot afford to ride rough shod over our members in such matters as failing to deliver material under contract, selling to our customers, refusing to allow claims made for shortage, low grade, etc. We have also to consider the report by our Committee on Trade Relations, who held conferences during the early part of 1919 with a similar committee of the Wholesale Lumber Dealers' Association. The result of this conference will be laid before you in the report of this Committee, and it is for you to decide whether this result meets with your approval, or whether we shall attempt to force the issue still further.

The Standardization of Millwork

We have many other important matters to consider to-day, such as standard millwork sizes, standard moulding designs, standard grading of soft woods, etc. Each of these might well take up all of the time that we have at our disposal during this convention. We must endeavor to reach our conclusions within a reasonable time and to draft them in such definite form as to permit of practical results being secured at an early date in such cases as we consider it advisable to do so. The matter of grading rules alone, is something which we cannot discuss too fully. We should consider in the first place whether it is in our interest to draw up such grading rules and to put them into practice. If we decide in favor of doing so, we will then have to devise ways and means of carrying out the idea to the best advantage.

A suggestion has been made to our secretary by one of our members that we should endeavor to induce the manufacturers of wood working machinery to educate men for positions in wood-working plants. The scarcity of skilled employees of all kinds is slowing up output in every direction and anything we can do to improve the situation will be worth while. It may be that we can devise a practical solution of this problem and I hope you will consider it carefully.

I need not make any extended reference to the Monthly Bulletin published by our association. It has been the means of keeping up interest in the work of the Association, and financially it has added an important amount to the receipts of the Association, as will be shown by the report of the secretary. I suggest that we devote part of our time to a discussion of the Monthly Bulletin with a view to advising the secretary whether it is filling the bill in our estimation, and giving him useful suggestions for increasing its value to the members.

Some Criticism of Price Lists

I would specially suggest that we discuss the price list which is published in the Bulletin. There has been a certain amount of criticism of this list. We want it to be as valuable as it can be and I hope that the members will come out frankly with any suggestions or criticisms which they may have to offer on this subject and on the subject of the Monthly Bulletin in general.

I have tried in these few remarks to outline some of the matters which I consider to be of most importance to us. I think I have mentioned sufficient to persuade you that the work of the association is growing rapidly and that its importance is increasing daily. I think also that what has been said is sufficient to convince you that, during the short time at our disposal here to-day and tomorrow, we should deal with the work as systematically as possible. With a view to facilitating matters, I suggest that we appoint a committee on resolutions, whose duty it will be to go carefully over all the reports that are presented and from them prepare a series of resolutions to be presented to the Association. In this way each important suggestion can be submitted to the general meeting in a systematic manner and dealt with according to its merits.

Development of Association Spirit

It has been suggested to me, and the suggestion meets with my very heartiest approval, that I should include in my remarks some few references to the very encouraging growth of the association spirit among all the branches of the lumber industry and trade in Canada. The importance to all of us of keeping this point of view in mind, and doing all we can to promote the development of the association spirit in all the branches of the lumber business, can not be over estimated. We now have active and successful associations representing the manufacturers, the wholesalers and the retailers in the lumber business. Each of these associations is working vigorously in its own field and the manufacturers and wholesalers are setting examples to us, of all that is praiseworthy and commendable in their work. I urge the members of the Ontario Retail Lumber Dealers' Association to keep before them the same lofty ideals of association activity, and to consider their association not solely as a means for the development of their own individual welfare, but as a factor in the improvement of conditions generally throughout the whole lumber business. In short, I am convinced that the more we are able to look upon our association, and the other associations, as branches of one big association which exists for the betterment of the whole lumber business in Canada, the more surely will we be able to work out those ideals of individual and collective service for which our own association was created. The most inspiring feature in connection with the history of our association, during the two years of its existence is the whole-hearted co-operation which has been extended to us by the Associations which represent manufacturers and wholesalers. We should strive continually to deserve this co-operation and to repay it in full measure.

Great Factor for Good of Trade

I have only a few more words to address to you before concluding. These are by way of exhortation to you to do your utmost for the Association, and by way of expressing to you the great pleasure which it has been to me to occupy the honorable position of president of your Association during the first two years of its existence. I honestly feel that we have in this association the greatest factor for the good of the trade that can possibly be created. I want to see its influence grow, its membership increase to two or three times what we have to-day, and I want to see the day, as I believe I soon shall see it, when this Association contains not only the leading 160 dealers of Ontario but every dealer who believes in giving and getting a square deal.

WORKMEN'S COMPENSATION AND INSURANCE

W. C. Laidlaw, chairman of the Committee on Insurance and Workmen's Compensation, presented an important report, as follows:

The duties of your committee on insurance and workmen's compensation during the past year have been largely in the nature of watching conditions, rather than taking any definite action. We have no report of transactions to present. Therefore, our report is in the nature of a consideration of some matters which we consider of interest, together with our suggestions thereon.

Insurance.—The insurance lessons of the past year are identical with those of former years and serve to emphasize the regrettable fact that many of our members do not give the problem of insurance the careful thought that it requires. In the first place, the past year has witnessed a most remarkable advance in the cost of materials, and we fear that many of our members have not realized, as fully as they should, the responsibility that this places upon them in connection with insurance. Whether a retailer is the absolute owner of the stock in his yard, or whether the ownership, in case of loss by fire, will be found to be vested in the wholesaler or manufacturer who sold it to him, his responsibility is the same. A retailer to-day, though he may have less in his yard than he had a year ago, may be carrying a considerable larger value in stock, and he should see to it that this value is as fully insured proportionately as was the value of stock which he carried a year ago. In many cases, a fire in a retail yard to-day, would unfortunately involve a great deal heavier loss to the retailer, or the wholesaler who sold the stock, than a fire twelve months ago would have involved. Your committee feels therefore that it should urge all members of the Association to make a close study of this subject at once, and see that their insurance is adequate.

Reducing Fire Risk in the Yards

We frequently hear retailers making the statement that the rate of insurance which they are obliged to pay is very high, even considerably higher than they think it should be. While this may be the case, retail lumber dealers have it in their own power to reduce the rates very considerably by systematic attention to those factors which are recognized by the insurance companies as reducing the risk. We would impress upon our members the importance of reducing the risk in their yards in every practical manner, by the installation of standpipes, hose, etc., so that when fire does commence it can be got under control immediately. In every factory there should be a fire brigade organized along lines similar to those of volunteer fire brigades in the small towns. The Chief should be held responsible for the equipment and for keeping it in proper order. Fire drills should be held at regular periods, once a month not being any too frequent.

We believe that our Association can be of very definite value to its members by continually impressing upon them the importance of this subject, and we would like to see it referred to at frequent intervals in our Monthly Bulletin. The fire waste in Canada is very great, and educational campaigns are needed to call attention to it. Our Association should do its share in this educational work, and our members should endeavor to promote the adoption of the most modern methods of fire prevention by retail lumber dealers in Ontario.

Operate Inter-insurance Exchange

An interesting association development in connection with insurance has recently taken place in the United States, where the National Retail Lumber Dealers' Association has organized and will shortly have in operation an inter-insurance exchange. Inter-insurance is accomplished by the interchange of contracts of indemnity among parties at interest—the policy holders. As a practical method of securing effective insurance at the lowest possible cost, consistent with financial safety, the inter-insurance exchange has already been proven a success in other cases. The interesting feature in connection with the exchange organized by the National Retail Lumber Dealers Association is the fact that it has been intimated to us that members of our Association will be able to take out insurance in this exchange. We expect at an early date to be able to report more fully upon this subject.

Workmen's Compensation.—The most important matter in connection with the Workmen's Compensation Act which we have to draw to the attention of our Association this year is the fact that apparently a strong effort is being made by the labor unions in Ontario to have the amount of compensation increased from 55 per cent. of the injured workmen's wage to a full 100 per cent. We feel that this would not be either just or wise. We would like to

hear this matter very thoroughly discussed by our Association at this annual meeting.

Several members of the Association have submitted to our secretary, matters relating to workmen's compensation during the past year. Only one of these cases requires comment by your committee. In this particular case an employee had sustained a slight injury on the end of his fingers which came in contact with a rip saw. He was injured on May 30th, and returned to work on June 13th. The accident was reported to our member by the young man's father on June 4th. On June 5th the member sent his first notice to the Workmen's Compensation Board. On June 13th he sent in the employer's subsequent statement on form 9. This was immediately after the workman returned to work. On June 26th the Compensation Board issued a cheque to the workman. On June 30th they sent our member a letter reminding him that form No. 7 had not been sent in, and stating that they proposed to issue an order against him for compensation on July 4th. Our member immediately sent in form 7, which was in their hands before July 4th. Nevertheless, the order was issued, to be paid within ten days, and payment was made under protest. Both forms 5 and 9 had been sent in on good time and the Board could easily have overlooked a slight delay in sending in form 7, as neither the workman nor the doctor suffered any loss or delay, nor had neither of them made any complaint against our member and it was not at first apparent that the workman would be absent for more than seven days. Our member complained against this ruling. The Board may be strictly within the letter of the law, but we believe that the law should be capable of a liberal interpretation and that the intention of the legislature never was that it should be stretched to cover cases of this kind. Your committee takes the ground that the Workmen's Compensation Board should endeavor to enlist the sympathy and co-operation of employers as well as employees, whereas the course they adopted in the case referred to above, and in other cases which have come to our attention, is calculated to antagonize the employer.

LEGISLATION PROBLEMS AND TRANSPORTATION

E. M. Barrett, of Ottawa, Chairman of the Legislation and Transportation Committee, outlined the progress that had been made on many vital matters coming under these headings and made a number of valuable suggestions as follows:

Mechanics' Lien Act

At our last convention your committee recommended that this matter be placed in the hands of a legal firm to prepare. This was done and Messrs. Jennings & Clute drafted a measure which was approved by the Executive Committee and placed before the Legislature, with the result that we were promised that the matter would be gone into during the recess but owing to the change in Government since then we have been obliged to go over some of the ground again. Our Secretary, however, has placed the matter before Hon. Mr. W. E. Raney who has asked us to again submit our recommendations so that he may have a committed appointment to go into it at the conclusion of the approaching session of the Legislature. We have instructed our lawyers, Messrs. Jennings & Clute, to do this and to urge that the bill be taken up early during the coming session and brought to a conclusion without waiting for a hearing during the subsequent recess; and the matter so stands.

Forestry Preservation

We feel that some action should be taken in Ontario towards copying the example of New Brunswick, Quebec and British Columbia in having the public-owned forest-lands placed under a united and technically-qualified management with a view to:—

Firstly—Placing the entire woods administration in the control of the Provincial Forester and a staff of experienced and technical men.

Secondly—That the staff or commission be composed of two Government members and two representatives of the wood using industries and to have full authority over the selection and appointment of all fire-rangers, timber scalers and other employees and to provide for the public duty for which there is no provision to-day, viz.:—The supervising of timber cutting and the ensuring of permanently productive forests.

White Coal

We believe that the greatest good can be derived for the people of the Province of Ontario by the rapid national development of our great water powers with a view to producing electric energy to replace coal and other fuel and would strongly recommend that a committee be appointed to investigate the progress made by Gov-

ernments of other countries such as Norway and Sweden, etc., in this direction. For the benefit of those who have not had an opportunity of studying the importance of this question it may be in order to add that the recent noteworthy development of the steam engine has been accompanied by its greater complication as a machine, so that the cost of maintenance, as well as the necessity for skilled labor in its upkeep has been a serious problem, which has been conspicuously emphasized during the war. On the other hand the greater simplicity and ruggedness of the construction of electric machinery provides a very great freedom from this handicap. There is also a distinctly progressive advantage in every manner, especially as to cost and efficiency, in the adoption of electric power. We, therefore, believe that it is to the advantage of the lumber industries and the people generally to request greater Governmental energy in the development of this commercial necessity.

Re Jacobs Bankruptcy Act

This question was discussed at our last convention and the matter has been fully gone into by your committee who find that the proposed act is widely favored, as it is apparent that it is intended to separate the wheat from the chaff. The main purpose of the measure introduced by Mr. Jacobs is to see that the debtor can get a discharge from his creditors. Under the Ontario Act at present if an honest man who has been up against it, fails and makes a settlement at so much on the dollar after his effects have been disposed of by the assignee, he is by no means relieved of the remaining amount due unless he secures a discharge from every creditor. No legal means can be undertaken to force creditors, who may hold out to sign a receipt in full, as it were, and thus the insolvent may have the obligation hanging over his head perpetually. Times may get good, he may decide to re-enter business, but he cannot do so in his own name and has to resort to various expedients. There is no distinction made at the present time between the honest and dishonest trader in the matter of securing a discharge or release, and under the law all are treated or regarded alike. Every one is thrown into the discard.

Business Assessment Act

With regard to this act it would appear that the members of the Retail Lumber Dealers' Association of Ontario are satisfied that it is a just one, insofar that we have not been able to obtain any information from them regarding any objections they may have to it. However, I want to go on record, personally, and say that I consider it an unjust piece of legislation and one that should be rescinded or at least replaced by a more equitable assessment act.

Labor Contracts and Agreements

There is an item that comes under the legislation heading which we would like to refer to but which we hesitate in doing because we thought it should really come under the observation of the committee on Trade Relations but as they may not have dealt with it we wish to bring it before the convention for discussion so that something may be done towards having the proper legislation enacted that will result in making all labor unions come under the Act Respecting Incorporation.—What we mean by this is that when a firm or employer signs a wage scale or working agreement with its, or their, employees there does not appear to be anything which makes the contract binding upon the employees as was instanced in the recent regrettable labor trouble in Winnipeg, where employees who signed agreements with their employers went out on strike in sympathy with other strikers. There should be some means through the law of the land that would make every individual member of a union responsible for the acts of that union as a body.

Workmen's Compensation Act

In addition to the recommendations made at our last annual convention which were dealt with by the legislative committee we believe that we should acquiesce in the action taken by the Canadian Lumbermen's Association of which Mr. W. C. Laidlaw was chairman, as follows:—

1. That all assessments should be based on the so-called Current Cost Plan, that is to say, deferred claims shall not be capitalized.
2. That any firm or corporation able to show satisfactory evidence of its financial stability may elect to stand outside the operation of the funds connected with the group in which the industry would be otherwise included and may pay individually the amount of the compensation awarded by the Board.
3. That all doctors, nurses, etc., shall be under the jurisdiction of the employer instead of under the Board, providing that such medical care and hospital accommodation are adequate and satisfactory to the Board.

Federal Banks

We would recommend that the lumber interests of Canada or even Ontario take some action towards promoting a Federal Banking System and we hope that the Ontario Retail Lumber Dealers

at this convention assembled, take the initiative in that connection and appoint a special committee to be known as the Banking Committee whose primary duties will be to take such steps and collect the data, detail and information necessary in forming a banking syndicate with a view to bringing about a Federal Banking System in Canada.

We may add that this suggestion arose out of a request that the banking syndicate referred to, give their attention to the matter of organizing a Lumbermen's Bank to be devoted to, and operated by, the interests of the lumber industries.

Housing Act

With regard to the Housing Act we would respectfully request that this matter be discussed on the floor of the convention as it appears that in many quarters the act is not being administered to the satisfaction of the public generally. The difficulty in the most part, appears to be that those in charge of the local commissions are not sufficiently qualified to deal with the matter in a practical way.

Transportation—Increase in Rates

At our last convention we drew attention to the fact that we thought the increase in railway rates was a war measure act. We find, however, that this increase is still in effect (i.e. 15 per cent. with a minimum of 1c per 100 lbs. and subsequently an additional 25 per cent. with a minimum of 5c per 100 lbs.) and that the increase is likely to remain in effect indefinitely and in view of the proposed further increases we hope this convention will carefully consider the advisability of appointing a strong committee to meet with a committee of the Canadian Lumbermen's Association and similar bodies to place before the Board of Railway Commissioners

Some of Hamilton's public buildings: City Hall at top, Court House in centre, Post Office at bottom

arguments favoring reduction in railway rates and to point out that further increases in rates can only result in causing greater labor unrest as a result of its direct effect on the high cost of living.

Weighing of Cars

We find that the great majority of claims against the carriers are due to errors in weights. This being the case we would recommend that such action as necessary be taken forthwith, to have the weight-masters at the different scaling points placed under the jurisdiction and pay of the Board of Railway Commissioners.

Interchanging Order

Some of the members of the Association have been notified that a new regulation has been issued by the Canadian Pacific Railway to the effect that freight from interchanged lines will not be placed for delivery on team or public sidings and that same would be accepted for delivery on private sidings only. This appears to be an arbitrary order and has many disadvantages to the public. It interferes with competition and adds considerable delay and expense and should be opposed.

Stop Over Rates and Privileges

We feel that this is a very important heading and embraces an opportunity for the convention to air their many grievances and might be discussed under heading as follows:—

The Proposed Increase in Freight Rates and the Relation Thereto of the Canadian National Railways.

With Regard to the Milling of Cars in Transit and the Necessity for Depositing the Amount of the Charges of the Through Way-Bill with the Company until the Cars Are Milled and Then Rebated the Amount.

The Increasing of the Charge from One to Two Cents per Hundred Pounds.

Private Sidings, Their Uses and Abuses.

Traffic Department

It has been suggested that a traffic department be organized in connection with the association. We would recommend that action be taken along these lines, and that care should be taken to secure a fully qualified Traffic Officer for that purpose and one who will be capable of disposing of the many vexing questions the moment they arise.

Freight Credits

It will be gratifying no doubt to our members to know that the complaint by this Association together with other associations early in 1919, lead the Canadian Railway War Board to give up their attempt to cancel freight credit arrangements and to acquire bonds from consignors and consignees. This is an example of the great good to be derived from co-operation.

SECRETARY TELLS OF DOINGS DURING PAST YEAR

Horace Boulton of Toronto, Secretary-Treasurer of the Association, in his annual report, which was a most comprehensive one, said:

Mechanics' Lien Act

Ever since the organization of our Association we have been endeavoring to induce the Ontario Government either to introduce a number of radical amendments to the Mechanics' Lien Act or to introduce a completely new act to take the place of the present one. The chief object we have had in view is to give the retail lumber dealers a reasonable amount of protection. Every dealer is more or less familiar with the way in which the present act works out to the disadvantage of firms which supply material for buildings. The unscrupulous contractor, or owner, or a combination of the two, can, under present conditions, take long chances in speculative building, or even in ordinary building for occupation. If the speculation turns out unsuccessfully the owner or contractor loses little or nothing, except his prospective profit, while the lumber dealer is lucky if he recovers a small fraction of the cost of the material he has supplied. Responsibility, under the present act, is not placed where it should be. The person who stands to benefit from the erection of the building should carry all the responsibility. Undoubtedly this was the original intention of the framers of the present act, but it has been affected by many judicial interpretations and amendments to the act, and has worked out otherwise so that the owner or contractor, if he desires to do so, can shift the loss on to the shoulders of the man who supplies the material.

Mr. Boulton then outlined the steps taken up to the present to secure a new act.

Workmen's Compensation Act

The Workmen's Compensation Act of Ontario has been under frequent consideration by the directors, the legislative committee, and the insurance committee of our Association. Last year a deputation from our Association waited upon the chairman of the board and submitted to him a number of suggestions regarding the operation of the Workmen's Compensation Act. We cannot say that our suggestions have lead to any definite changes in the situation. It appears, in fact, that in a number of cases our members have had strong reason for complaint against arbitrary rulings made by the board in regard to a number of matters of routine. In various cases our members have reported what they considered to be unfair rulings relating to fines for errors or omissions in making out or submitting reports, and similar matters. These subjects are referred to in some detail in the report of the chairman of our committee on Workmen's Compensation. Some of our members have also drawn our attention to the fact that there is evidently a campaign in progress on behalf of labor to provide that compensation shall be paid up to a full 100 per cent. of the wages of the injured employees. We have been asked to submit this matter for discussion at the present meeting. The report of our committee will also deal with this subject.

Freight Credit Arrangements

Many matters of definite importance to the members of our Association have been dealt with by your Secretary during the past

year. It will not be possible to go into all of those in detail, but the important ones will be mentioned and explained.

Early in the year 1919 our Association took strong objection, in co-operation with several other associations, to a proposal brought forward by the Canadian Railway War Board. On February 3, 1919, the Canadian Railway War Board issued a circular No. 97 regarding the collection of transportation charges including demurrage and storage charges by railways operating in Canada. The circular provided that beginning with March 1, 1919, payment of such charges should be on a cash basis, and that credit arrangements then in existence which might conflict with the new regulations should be cancelled. Arrangements were to be provided for extending credit for a period not to exceed seven days after receipt for shipment in cases of prepaid consignments, or after delivery at destination in cases of collect consignments, providing the consignor or consignee as the case might be, should file a surety bond or bank guarantee in an amount satisfactory to the treasurer or other properly designated officer of the carrier.

This circular was an amendment of a similar circular No. 86 issued by the Board during the autumn of 1918. From the first, our Association, in co-operation with the Canadian Manufacturers' Association, and other associations, made strenuous objection to it. At our Annual meeting on February 11th, 1919, a resolution was passed objecting to the proposed cancellation of credit arrangements. Following this, the Secretary of the Association, with the approval of the Chairman of our Committee on Transportation, corresponded with the Canadian Railway War Board, explaining our objections in detail. The Canadian Railway War Board opposed us strongly until early in April. On March 3rd they advised us that the former credit arrangements would be continued until a date not later than June 1st. We protested again, and the Board advised us on March 10th that an opportunity would be provided in the near future for a further conference between the railways and the shippers.

The objections submitted by ourselves and other interested shippers, finally had the desired effect, for a circular was issued by the Canadian Railway War Board on May 6th superseding circular No. 97 and leaving the situation to all intents and purposes, the same as it had formerly been.

This subject has been dealt with here somewhat in detail in order to illustrate the fact that vigorous co-operation in a matter of this kind is undoubtedly valuable. Had we, in co-operation with other shippers, not protested as we did, a heavy burden would have been placed upon all shippers in Canada.

Mr. Boulton next referred to the successful summer trip of the retailers to the Georgian Bay district, the warm welcome accorded the visitors and the educational and social features of the 1919 outing. He also dealt with the creation of the proposed Traffic Department and the shortage of skilled employees for planing mills, sash and door factories, etc.

Standard Millwork Sizes

At our annual meeting in February, 1919, a resolution was arrived in favor of the adoption of standard millwork sizes for the Ontario trade. In connection with this subject circular letters have been

addressed to all members of the Association asking them to express their views and report the sizes which they would consider most suitable. The reports received indicate a practically unanimous opinion in favor of the adoption of standards if suitable ones can be worked out. There is considerable difference of opinion, however, regarding the actual standards that should be adopted. The reports sent in to the secretary show that quite a large number of the trade have a preference for the following standard finished sizes for white pine, red pine, spruce and hemlock:

Standard Finished Sizes

Thickness Rough	Dressed....
1/2 in.	3/8
1 in.	13/16
1 1/4 in.	1 1/8
1 1/2 in.	1 3/8
2 in.	1 7/8
3 in.	2 1/4

Rough	Dressed Four sides	Flooring
4 in.	3 3/4	3 1/2 face
5 in.	4 3/4	4 1/2 face
6 in.	5 3/4	5 1/2 face
8 in.	7 3/4	6 1/2 face
10 in.	9 3/4	
12 in.	11 3/4	

While there is considerable diversity of opinion regarding the best sizes to adopt there is a general desire on the part of the members to see something done and an inclination to accept whatever standards are finally decided upon.

The advisability of adopting standard moulding designs has also been submitted to all our members and there is a general desire for action by the Association in this connection. The manner in which it will probably be most practical to deal with these two subjects is by the appointing of a special committee, or possibly two special committees who shall be empowered to investigate the subjects and submit a definite set of standards. These standards can then be submitted to the members and a vote taken upon them by mail, or you can entrust your committees with power to establish such standards as they decide upon. The matter is of sufficient importance for a very thorough discussion during the present meeting.

Mr. Boulton next dealt with the value of Local Association Branches, Plan Books and Terms of Sale, all of which have been fully referred to previously in these columns.

Cost Accounting

There was much interesting discussion at our Annual meeting last year in regard to the "Cost of doing business." The discussion concluded with a lengthy resolution and with instructions to the secretary to furnish to each member a copy of the Cost Survey issued by the National Retail Lumber Dealers' Association of the United States. The National Association kindly favored us with sufficient copies for this purpose and they were distributed early in the year. While referring to this subject it will be interesting to our members to report an experience of one of our members. In the Monthly Bulletin an effort has been made to present the importance of accurate cost accounting, in practically every issue. One of our members, when forwarding his cheque for membership last year advised us that he had had a very successful year's business which was "largely due to having joined the Association." He had read many of the articles on cost accounting which appeared in the Bulletin and finally had discovered that he was selling his stock at dangerously low prices; in some case getting less than 3 per cent. more than what the stock cost him. The articles in the Monthly Bulletin induced him to change his methods and to check up everything that went on in the office and plant. In 1917, before joining our Association, the manager and the secretary-treasurer of this company had worked very hard and were surprised at the end of the year that they had only broken even. They commenced the new year by checking up their next contract, which showed them that they were far too low on their labor cost and selling prices. At the end of 1918 they found that they had made exceedingly satisfactory net profits on their year's operation. In a letter to the secretary they then said "We feel that credit is due your Association, for, the publication of the items in the Monthly Bulletin that attracted our attention, set us thinking about the cost of doing business."

It is important, when considering this subject of cost accounting, under the peculiar conditions which exist to-day, to give as careful study as possible to the fact of the rapidly increasing cost of materials and labor.

The Secretary then took up the matter of increased freight rates and soldiers' civil re-establishment in which the members of the

Some historic spots of interest in the parks of Hamilton

association, in order to assist in getting returned men settled upon farms in Ontario, offered to furnish them with such lumber as they might require for the erection of buildings at cost prices.

Ethical Grading Practices

An interesting and practical suggestion in regard to a particular feature of the retail trade was made by one of our members early in the year. This member stated that a wholesaler, who called upon him said he had a very fine grade of No. 3 white pine lath for sale, so fine in fact, that it would pass for No. 2 lath anywhere and that some retailers were selling it for a No. 2. The member reporting this matter said that this, to his mind, was not square business on the part of the retailer. He suggested that mill men should be asked by our Association to stencil the grade of lath on every bundle, or if a stencil was not possible, to mark the figures 1-11-111.

Shingles by the Square

During the past few months, arrangements have been made by the manufacturers of shingles in B. C. to put into effect a change in the method of marketing shingles which is of importance to our members and should be very minutely discussed at the present meeting. Commencing April 1, it is proposed by the B. C. Shingle Agency and by the Shingle Branch of the West Coast Lumbermen's Association to supply the market with shingles produced by their members on the basis of what they have decided to call a "square." Each unit bundle is to contain a quantity of shingles sufficient, according to the statement of these associations, to cover 1/4 square (25 sq. ft.) In the past, four bundles of random width shingles have always been sold as "1000." In the future four bundles under the new system will be equivalent of material to cover 100 square feet of roof.

In introducing this change, the Associations state that it has been brought about in order to meet the wishes of retail dealers and their customers. Undoubtedly the Associations have given the subject a great deal of minute study. Whether their conclusion will

meet with unanimous approval on the part of the retailers remains to be seen. A discussion of the matter at this meeting will be advisable.

It is hardly practical to give in this report a detailed analysis of the manner in which the Western Associations have worked out their new unit. An outline of the situation, however, will be attempted. The Associations, in explaining the situation say:—

1. A canvass of the trade has shown that $4\frac{1}{2}$ inches is the most common weather exposure on 16 in. shingles. On 18 in. shingles, investigation has shown that $5\frac{1}{2}$ in. is the most general and efficient exposure. The manufacturers accordingly specify these exposures.

2. The "square" unit on 16 in. shingles specifies twenty-two double courses per bundle, four bundles per "square." The width of the bundle is to be 20 in. with $1\frac{1}{2}$ in. tolerance per course for "fits" in packing. This gives $22 \times 2 \times 4 = 176$ single courses per "square." The lineage per course is $18\frac{1}{2}$ in. and the standard weather exposure $4\frac{1}{2}$ in. $176 \times 18\frac{1}{2} \times 4\frac{1}{2} = 14652$ in. or 101.75 square feet covering capacity per "square."

3. Allowing for $\frac{1}{8}$ in. spacing between shingles in laying, the area covered will be slightly increased, to 103.45 square feet.

4. With 18 in. shingles the "square" unit specifies eighteen double courses per bundle, four bundles per "square," and the width of the bundle 20 in. with $1\frac{1}{2}$ in. tolerance for "fits" in packing. Figuring in the same manner as for the 16 in. shingles, a covering capacity is shown, in the case of 18 in. shingles, of 101.75 square feet, and allowing $\frac{1}{8}$ in. spacing between shingles in laying, this is increased to 103.55 square feet.

5. The shipping weights on Red Cedar Shingles, packed by the "square" are given as follows:—

- All 16 in. shingles $5\frac{1}{2}$ thickness — 160 lbs. per "square."
- All 16 in. shingles $6\frac{1}{2}$ thickness — 140 lbs. per "square."
- All 18 in. shingles $5\frac{1}{2}$ thickness — 160 lbs. per "square."
- All 18 in. shingles $5\frac{1}{2}$ thickness — 150 lbs. per "square."

Hardwood Flooring Standards

At our Annual meeting in February, 1919, a resolution was carried to the effect that Canadian hardwood flooring manufacturers should be urged to standardize thicknesses and tongue-grooving, and, if possible, to adopt United States standards. Your secretary has circularized the hardwood manufacturers in Canada on this subject and has been advised by them that a certain set of grading rules, including standard thicknesses, was adopted on November 15th, 1916. Your secretary is in possession of a set of these rules, furnished by the Seaman Kent Co., Ltd., and suggests that if our Association desires to discuss this subject more fully it should call upon the representative of Seaman, Kent Co., who is in attendance at the meeting on behalf of his firm, who are members of our Association.

The Demands of Labor Unions

Your secretary recently received from the eastern district of our Association a letter stating that the Ottawa District Council of the United Brotherhood of Carpenters and Joiners of America had submitted to them a proposed agreement to become effective May 1st, 1920. The agreement included a number of very important demands relating to increased wages, hours of labor, union control of factories, the use of the union label on all work produced, etc. Enquiries have been made by us at some other points in Ontario where

a somewhat similar situation was understood to have developed. The secretary has with him correspondence on this subject which will be available if the members from the districts concerned desire to introduce a discussion upon this matter.

Shipments Secured

During 1919 your secretary was called upon to carry out negotiations with some manufacturers and wholesalers who had not completed their contracts for the delivery of material, and seemed inclined to repudiate them. While they have not had so many cases of this sort to deal with as we had in 1918, we believe that our efforts in this direction are of much importance to the trade, and that members who have difficulties of this class to contend with should make use of our services when they fail to obtain satisfactory results themselves. There have been some cases which we have not been able to bring to a satisfactory conclusion, and there have been others in which we have obtained very encouraging results.

The Possibility of an Embargo

It has been suggested to your secretary, by a prominent member of the Canadian Lumbermen's Association, that our Association might discuss the present situation in connection with the scarcity of lumber on the Canadian markets, and the possibility that the Canadian Government may be urged to consider the advisability of placing an embargo upon the export of Canadian lumber to the United States. The situation is one which demands a very careful study before any conclusion is reached. Your secretary submits it, not as having come from any member of the Association but as a subject which you may possibly desire to discuss. It is probable that the Canadian Lumbermen's Association would appreciate our co-operation in connection with this matter. They feel, according to assurances which have been given to your secretary that the interests of the retailers coincide with those of the manufacturers in this connection. At first glance, the retailers may feel that an embargo upon lumber exports from Canada would be to their advantage insofar as it would increase the available supply for the Canadian markets and thereby tend in the direction of lower prices. It is pointed out, however, by the manufacturers, that Canada is dependent upon the United States for very important raw materials such as coal and iron, and that the United States are in a position to retaliate if Canada adopts such a measure as an embargo on lumber. Your secretary hesitates even to suggest a line of discussion upon this subject and submits it without comment.

The balance of the address of the secretary-treasurer dealt with details of disputes, and negotiations conducted by the Association during the year, dealing largely with personal matters between various wholesalers, manufacturers and retailers, and illustrating forcibly the good results that can be obtained by a policy of moderation and compromise.

Considering that pork packers utilize everything about a hog but the squeal; that the little drops of blood are so expertly camouflaged as beef tea cubes by the billion; that elegantly ornamented "imported" cigarettes are made of what used to be the waste and the floor sweepings of cigar factories and tobacco warehouses, there ought to be found a far greater and more profitable market for sawmill waste of all sorts—especially when so many millions of people are constantly lugging about and fondling dolls of all kinds stuffed with sawdust.

Re-elected Director, Eastern District

THE RESOLUTIONS ADOPTED BY THE RETAILERS

Moved by K. J. Shirton and seconded by J. J. Cluff, Seaforth:—That the Ontario Retail Lumber Dealers' Association instruct the secretary to secure incorporation for the Association under an Ontario charter.

Moved by T. C. Warwick, Blenheim, seconded by Fred Richardson, Ingersoll:—That this Association recommends that its members should, as far as possible, confine their purchases to Made-in-Canada goods, with a view to doing whatever is in their power to remedy the existing adverse rate of exchange.

Moved by Wm. Laking, Hamilton, seconded by W. C. Irvin, Toronto:—That this Association approve the steps taken by our committee in connection with the Mechanics' Lien Act, and desires them to continue their efforts to have a new act passed by the Legislature of Ontario.

Moved by J. S. Bond, Toronto, seconded by Chas. Hubbell, Thamesville:—That our committee on Legislation be instructed to watch impending legislation as carefully as possible, with a view to being prepared for dealing with any developments which may be unfairly adverse to the interests of our members.

Moved by H. S. Ludlam, Leamington, seconded by Fred Richardson, Ingersoll:—That the Secretary be instructed to get out further copies of the "terms of sale" card and that they be printed in larger type about 16 in. x 12 in., and that an issue of 500 copies be printed so that each member may have at least one copy, and members who desire several copies may be furnished with them.

Moved by Fred Richardson, Ingersoll, seconded by M. H. Armstrong, Burlington:—That our members be urged to pay particular attention to the serious importance of a complete and accurate cost accounting, especially in view of the possibility of important legislation being passed in this connection at almost any date, and that the members be requested to furnish the secretary as frequently as possible with any important information on this subject, which they may have, for publication in the Monthly Bulletin.

Moved by J. J. Cluff, Seaforth, seconded by D. C. Baird, St. Marys:—That the departments of labor in the Dominion Parliament and the Legislature of Ontario be urged to pass legislation providing that all labor unions shall be incorporated.

Moved by E. M. Barrett, Ottawa, seconded by K. J. Shirton, Dunnville:—That the Ontario Government be urged to adopt more modern and effective methods of forest preservation and that the management of Ontario Forests be placed under a department devoted exclusively to reforestry and preservation.

Moved by G. P. Davidson, Ottawa, seconded by James Harriman, Niagara Falls:—That when the order of business for the election of officers is reached, we recommend that the Association also appoint representatives for the two following committees: Legislation and Transportation and Insurance and Workmen's Compensation.

Moved by E. M. Barrett, Ottawa, seconded by W. M. Tupling, Orillia:—That our secretary be instructed to ask the Board of Railway Commissioners for an explanation of their order permitting the C. P. R. to refuse inter-switching with other lines except for delivery to private sidings.

Moved by W. M. Tupling, Orillia, seconded by J. J. Cluff, Seaforth:—That this Association approve of the steps

taken by the Canadian Lumbermen's Association in opposing the re-enactment of the Business Profits Tax and approving the extension of the income tax in conformity with the necessities of the Government to meet its incurred obligations arising out of the war.

Moved by W. Saunders, Dutton, seconded by John T. James, Bridgeburg:—That our committee on Transportation be instructed to act in conjunction with other associations, which may be seeking improvements in traffic conditions from the shippers' point of view, and especially to co-operate in any effort to remedy the present unsatisfactory conditions relating to overcharges and failure of the railway companies to furnish weighing particulars; also that we support any efforts in the direction of having the weigh-masters in the employ of the Railway Board of Canada instead of the railway companies.

Moved by J. B. Mackenzie, Georgetown, seconded by F. W. Bryan, Collingwood:—That this Association appoint a small special committee to study the question of standard millwork sizes and the question of standardized moulding designs, and that their report be furnished to the Secretary for publication in the Monthly Bulletin.

Moved by K. J. Shirton, seconded by B. F. Clarke, Glencoe:—That the members of the Association be urged to take immediate steps for the formation of local branches wherever possible, and that the five districts be urged to encourage the formation of local branches within their respective territories, and that the incoming directors be requested to assist the secretary in this connection by attending organization meetings wherever possible.

Moved by E. M. Barrett, Ottawa, seconded by T. J. Roussel, Hamilton:—That in any localities where our members are threatened with excessive demands on the part of the labor unions, they be urged to communicate without delay with the secretary and take no steps without first ascertaining from the secretary whether he has any information of similar demands being made by unions in other parts of the province.

Moved by E. M. Barrett, Ottawa, seconded by B. F. Clarke, Glencoe:—That the motion carried at our organization meeting, which provided for furnishing local associations with financial assistance up to \$100 per association for organization purposes, be rescinded.

Moved by A. Rhind, Toronto, seconded by J. E. L. Streight, Islington:—That we recommend that our association should co-operate with educational authorities with a view to establishing classes in woodworking plants to be operated in connection with technical schools and that the secretary be instructed to communicate with the Minister of Education on this subject.

Moved by K. J. Shirton, Dunnville, seconded by James Harriman, Niagara Falls:—That this Association appoint a committee on the subject of lumber grading rules, this committee to have power to confer with representative committees from the Canadian Lumbermen's Association and the Wholesale Lumber Dealers' Association on this subject, and that we recommend that a joint committee for this purpose should consist of about nine members, three to be elected from each of the three associations.

Moved by W. M. Tupling, Orillia, seconded by J. S. Bond, Toronto:—That this Association take immediate steps in the direction of securing an expression of opinion from

the members as to the proposal for the creation of a traffic department and freight audit bureau and that the secretary with the advice of the directors be authorized to take action as soon as possible, for carrying out this proposal, provided that it meets with the general approval of the Association, and also that the secretary be authorized to communicate with the Wholesale Lumber Dealers to ascertain whether they would be disposed to co-operate in the creation of a joint traffic bureau for the two associations.

Moved by T. C. Warwick, Blenheim, seconded by James Sparling, Meaford:—That the next annual meeting of the Association be held in Toronto and that it be held during the second or third week in February, subject to the call of the president; also that the directors be empowered to provide for a three-day meeting if they consider it advisable, and that the advertisers in the Monthly Bulletin be permitted to display their products at our annual meeting provided they do so entirely at their own expense.

Moved by J. B. Reid, Toronto, and seconded by J. B. Mackenzie, Georgetown:—That the Association hold an annual Summer trip as usual.

Moved by E. M. Barrett, Ottawa, and seconded by W. C. Gardiner, Toronto:—That the selection of the places to be visited and the time be left in the hands of the incoming president and the secretary to decide the route and other details.

It was decided to continue the Trade Relations Committee in office for another year.

Moved by W. M. Tupling, Orillia, seconded by K. J. Shirton, that the Trade Relations Committee be empowered with the secretary to draw up an order form which shall be published in the Monthly Bulletin and that legal authority be consulted with a view to having the same made as binding as possible and that the Secretary receive opinions as far as possible with respect to the form published.

Moved by J. J. Cluff, Seaforth, seconded by B. F. Clarke, Glencoe:—That the chairman or presiding officer of each local association or branch be ex officio one of the directors of the O.R.L.D.A.

Moved by Wm. Laking, Hamilton, seconded by W. E. S. Savage, Mimico:—That a hearty vote of thanks be tendered the retiring president, directors and other officers of the Association who have served so faithfully and satisfactorily since the Association was organized.

NEW OFFICERS AND COMMITTEES

Officers of the Association for 1920:—

President—John B. Reid, Toronto.

Vice-President—E. M. Barrett, Ottawa.

Secretary-Treasurer—Horace Boulton, Toronto.

Directors—Eastern District—G. P. Davidson and local chairman of Ottawa Committee.

Southern District—J. C. Scofield, Windsor, and chairman of local committee.

Central District—W. M. Tupling, Orillia, and T. H. Hancock, Toronto.

Northern District—F. E. Hollingsworth, Sault Ste. Marie, and local chairman.

Western District—K. J. Shirton, Dunnville, and W. J. Aitchison.

Stratford Branch—Robert Oliver, Listowel, and D. C. Baird, St. Marys.

Orangeville Branch—J. A. Matthews, Orangeville, and J. B. Mackenzie, Georgetown.

The retiring president, Thomas Patterson, was on mo-

tion elected a director for the coming year and each immediate past president will be ex-officio a director.

The Legislation and Transportation Committee was appointed as follows:—B. F. Clarke, Glencoe, Ont., Chairman (Southern District); J. S. Bond, Toronto (Central District); Wm. Laking, Hamilton (Western District); Howard Hesson, Sault Ste. Marie (Northern District); F. R. Anglin, Kingston (Eastern District); W. G. Gorvett, Arthur (Orangeville Branch); E. K. Kalbfleisch, Stratford (Stratford Branch).

Insurance and Workmen's Compensation Committee:—W. C. Laidlaw, Toronto, Chairman (Central District); H. A. L. Swan, Ottawa (Eastern District); W. A. Hadley, Chatham (Southern District); W. J. Aitchison, Hamilton (Western District); Mr. Andress, Sudbury (Northern District); J.

Guy H. Long, Hamilton
The Chairman of Local Reception Committee

J. Cluff, Seaforth (Stratford Branch); J. B. Mackenzie, Georgetown (Orangeville Branch).

The 1920 Membership Committee is composed of E. M. Barrett and Local Executive Committees.

Arbitration and Inspection Committee, composed of local secretary and board, to be appointed for local purposes.

Some Jottings of the Sessions

On the afternoon of the first day of the convention the delegates were taken by special car to the plant of the P. B. Yates Machine Co., where they were shown through the extensive establishment by G. W. Robinson and C. H. Dankert. Demonstrations were given on a number of wood-working machines. Mr. Guy Long also had his "Little Giant" tractor on exhibition and it attracted a good deal of attention. This machine is a wonder. Taking a Ford truck as the foundation for the invention, a powerful little "iron horse" has been built. By using the Ford engine and the front end of the Ford truck, a chassis and traction connection has been evolved, with the result that a semi-tractor with an eight ton pulling capacity is seen.

The delegates were entertained in the banquet room of the Royal Connaught hotel on Tuesday evening February 24th to a delightful exhibition of moving pictures and vaudeville by the Seaman, Kent Co. of Toronto, who showed a film of about one thousand feet, depicting how hardwood flooring is made from the tree to the finished product.

The proceedings closed on Wednesday night with a splendid banquet which was attended by nearly two hundred retailers, wholesalers and travelling salesmen. A capital programme was put on, the speeches were bright and witty and the associations of gathering will long be remembered. The hosts were the Hamilton lumber dealers who were accorded a hearty vote of thanks for their generous hospitality.

Fuller reference to a number of leading features of the convention are, owing to limitations of space, held over until the next edition of the "Canada Lumberman."

Personal Paragraphs of Interest

Geo. W. Grier, president of G. A. Grier & Sons, Limited, has left Montreal for the South.

M. C. Small, of the Logging Division of the Laurentide Company, Limited, Grand Mere, is on a visit to California.

H. W. Robinson Fort William, Ont., manager of the Pigeon River Lumber Co., who was seriously ill, is able to be around again.

R. Tourville M. L. A., of the Tourville Lumber Mills, Limited, has been elected a member of the council of the Montreal Chambre de Commerce.

Aird Flavelle of Thurston-Flavelle, Limited, Port Moody, B. C., spent a few days recently in Toronto and in Lindsay on a visit to his many friends in the East.

J. L. Campbell, of Campbell, Welsh and Paynes, Toronto, who has been confined to his home with illness for some time, is able to be around again.

Sidney Anderson of Anderson, Shreiner and Mawson, wholesale lumber merchants, Toronto, who has been spending the past few weeks in England has returned home.

R. G. Chesbro, of Toronto, Eastern representative of the Allen-Stoltze Lumber Co., of Vancouver, has returned from an extended trip to the Coast.

Ed Letherby, of Chew Bros., Midland, Ont., who has been spending the winter months at Los Angeles, Cal., intends returning home within the next fortnight.

Duncan McLaren of the Union Lumber Co., Toronto, who has been confined to his home by illness for some time, is able to be around again.

W. F. V. Atkinson of Sault Ste. Marie, Ont., chief forester for the Spanish River Pulp and Paper Mills, Limited, spent a few days in Toronto, recently.

Calder, Henderson & Livingston, of Glasgow, Scotland, have admitted into partnership James McDunn, who has been associated with the firm for the past eighteen years.

Ormsby Oliver of the Oliver Lumber Co., Toronto, and wife, are spending a few weeks in Florida. Joseph Oliver and wife left recently for the Sunny South to spend the remainder of the winter.

Walter S. Marzett, representing F. Reddaway & Co., manufacturers of camel brand belting, Montreal, was in Toronto and other cities recently, calling upon a number of sawmill and wood-working operators. This firm turn out fibre belting of all kinds.

Alex Read, of Read Bros., Toronto, who, with his wife, has been spending the past few weeks in Bermuda and other points south, is expected home about the middle of the month. He has been having a very enjoyable winter holiday.

J. J. St. Louis, who was for several years with the Rathbun Co. of Deseronto and later purchasing agent for the British Chemical Co. Trenton, Ont., has taken a position with the Fesserton Timber Co., Toronto and will look after the latter's customers in Western Ontario.

William R. Lunan, the chief lumber inspector of the Montreal Harbour Commissioners, died on February 14th at his residence in Montreal, aged 74. He was one of the oldest employees of the Commission.

D. M. MacMillan, of Brantford, who returned some months ago from service overseas, and previous to enlisting was in the lumber line in Minneapolis and other cities in the west, has joined the selling staff of the Fesserton Timber Co., Toronto, and will look after the trade in Toronto and vicinity.

Mrs. Janney, wife of the late Wm. Janney, who was vice-president of Shurly-Dietrich, Limited, saw manufacturers, Galt, Ont., died recently in Toronto, where she has resided for the past four years. Her husband predeceased her six years. She is survived by two sons and one daughter.

J. A. McBean, of McBean and Verrall, wholesale lumber merchants, Toronto, is a member of the committee on hardwood grading rules of the National Hardwood Lumber Association which will meet in Chicago on March 18 and 19 when several proposed revisions of the present rules will come up for discussion. There are sixteen members on the committee and Mr. McBean is the Canadian representative.

The many friends of J. B. Jarvis, of the Elgie and Jarvis Lumber Co., Limited, Toronto, are extending sympathy to him in the death of his wife who passed away recently from pneumonia. Previous to her own illness she had been nursing her children, who were down with influenza. Mrs. Jarvis is survived by her husband and two children, by her mother, Mrs. Mary Rogers, and by a brother in Edmonton.

Large Interests Negotiating for Shipyards

A company represented by Capt. E. V. Argon, is negotiating for the purchase of the shipbuilding yards which were operated by the Foundation Co. of B. C. Limited, at Victoria, B. C. While the identity of the company or the interests behind the deal have not been disclosed, the plans of the new concern call for the construction of forty or more wooden steamships. The vessels will be larger than those constructed by the Foundation Co. for the French Government, being all from 4000 to 4500 tons register. The construction of these steamers will provide work for the yards for several years, and might develop into a permanent industry, including the possibility of the construction of steel ships.

Price Bros. Make Big Earnings

A stock dividend of 22 per cent. has been declared by the directors of Price Bros., Ltd., Quebec, on their capital stock. This dividend is payable on February 25 to shareholders of record the same day. The company's outstanding capital stock now amounts to \$5,000,000, and with the payment of this latest melon this amount will be increased by \$1,100,000 shares, giving the company a total paid-up capital of \$6,100,000 out of the authorization of \$10,000,000. The new stock will be equal to one new share of stock for each 4.54 shares now held.

Following the announcement of the declaration of a 22 per cent. stock dividend the shares jumped to 320 on the Stock Exchange, an advance of 20 points over yesterday's close.

How Many Strikes Reduce Log Output

Speaking of logging prospects in Northwestern Ontario, John Stirrett & Sons, of Port Arthur, state that owing to strikes and unrest in the camps the cut will not be nearly as large as anticipated some months ago. They add:—When we started operations here last fall we figured on getting out about ten million feet of lumber and three hundred thousand railway ties. At that time things looked to be very fair toward fulfilling our expectations. Early in November we had a strike in our tie camps which has had the effect since of curtailing our operations in this respect so that as far as we can see just now, we will not get more than one-third our original quantity. This strike was engineered by the O.B.U. which in this district is handled solely by the foreign element of our population practically all the members of which are Finlanders.

We had our logging camps nicely running at the beginning of the year and thought that we would be able to escape any difficulties along this line but were sadly disappointed therein inasmuch as another strike was called on January 2, engendered by the same organization and with little or no notice.

These two episodes have sadly handicapped our operations and now that the season is practically over we find our output very much curtailed. In fact, it looks now as if we will not have much more than half our output of lumber and only one-third the quantity of ties we originally figured on getting. This is a great loss not only to ourselves but we imagine to the country at large particularly as the crying need at this time is production.

Our wages costs have gradually increased since starting not only as far as the individual money paid to men is concerned but also respecting the poor class of labor available. We claim that two men now at the increased wages are not as efficient as one man was some years ago. This we feel is very conservative figuring. Our observations as far as other operators here are concerned are practically on a par with our own troubles, the aggregate result being that there will not be more than fifty per cent. production all through the district. Practically all companies have had their own times with strikes and rumors of strikes until one is tempted to wonder when or where the whole thing will end.

Advertisements are funny things sometimes, for example, these, that were actually printed:

"I will make coats, caps and boas for ladies out of their skins."

"I want an overseer who can take care of 5,000 sheep who can speak French fluently."

"Wanted: A girl who can cook; one that will make a good stew."

"I want a husband with a strong Roman nose with strong religious tendencies."

"I will sell a fiddle of old wood that I made out of my own head and have wood left, enough for another."

"For Sale: A small stock of the same whiskey drunk by his majesty on his recent visit to Dublin"

How Overhead Carriers Save Time and Labor

Method Adopted by Toronto Firm is Applicable to Any Plant—Production is Speeded Up, Stock Handled Rapidly and Economically—The Operation

Formerly when labor was plentiful and comparatively cheap the handling of material in the process of manufacture did not receive the attention it deserved. Nothing was thought of taking a couple of men away from their work to help push a truck load of stock from one machine to another. The present scarcity of labor, and its high cost, has forced the factory owner to use every means at hand to conserve it. In this effort for greater efficiency the moving of the work about the plant is not being overlooked.

A firm who, in this respect, has kept abreast of the times is the Watt Milling & Feed Co., Limited, of Toronto, Ont. This concern recently installed an overhead carrier system to facilitate the handling of the material in the plant, and it has proven to be a labor saving, cost reducing feature.

Mr. Allan Watt, when asked his opinion, was very enthusiastic about the overhead system. He stated that they would not be without it for anything. It has replaced four men who were formerly employed behind the different machines and in moving stock about the plant, and where the stock used to be picked up and laid down a number of times before it was finished, it is now whisked from one operation to another with a minimum of labor and effort. Larger loads can be moved with fewer men and with greater ease and rapidity. Another feature is that a small pile of lumber, or another carrier load of material, on the floor does not prove a serious obstacle as the load is easily lifted clear of all obstructions.

The accompanying plan gives an idea of the system installed. The main overhead track forms a rectangle, enclosing most of the equipment. Where it goes between the second sticker and the band resaw it feeds both machines. The same at the far end, where it is used to carry stock to and from the last machine. This machine, a sticker, is used largely for thin oak.—T & G flooring. The oak is resawed on the bandsaw, then picked up and carried to the sticker. After being matched it is raised and run out to the dry storage. The shorter lines, as indicated, take the finished material from two of the stickers and feed the rip saw.

At each intersection marked X on the drawing a switch is provided, so that the trolleys may be run on the main track or switched off at will. At these points a small section of the curved track is hinged and is arranged so that it may be dropped down on top of the main line, thus making connection with the side line. It takes only a few seconds to make the change.

The second illustration gives an idea of the methods used to support the overhead track and the U beam used for carrying the stock. The former is self explanatory and need not be dwelt on in detail. As most of the material manufactured is in long length the ordinary form of truck frame is not suitable. Instead, steel in the form of a shallow U beam, has been taken and bent, as shown. Two holes were drilled near the top for the hooks attached to the

tackle. This tackle is shown in the drawing. Two of these bent U beams are taken and placed on the floor, separated to accommodate the length of material being handled, and the stock is piled in or drops in as it leaves the machine. When full it is picked up and placed where desired.

The carrier, which runs on a track, is a short trolley on two wheels with an efficient type of quick-acting chain block attached. Using the bent beams on long stock necessitates two trolleys and blocks being used, one for each end. It is a simple matter to run the blocks into position and attach the hooks, then a few pulls on the chains and the work is off the floor and away. If the passage is obstructed the load can be raised sufficiently to clear. A few

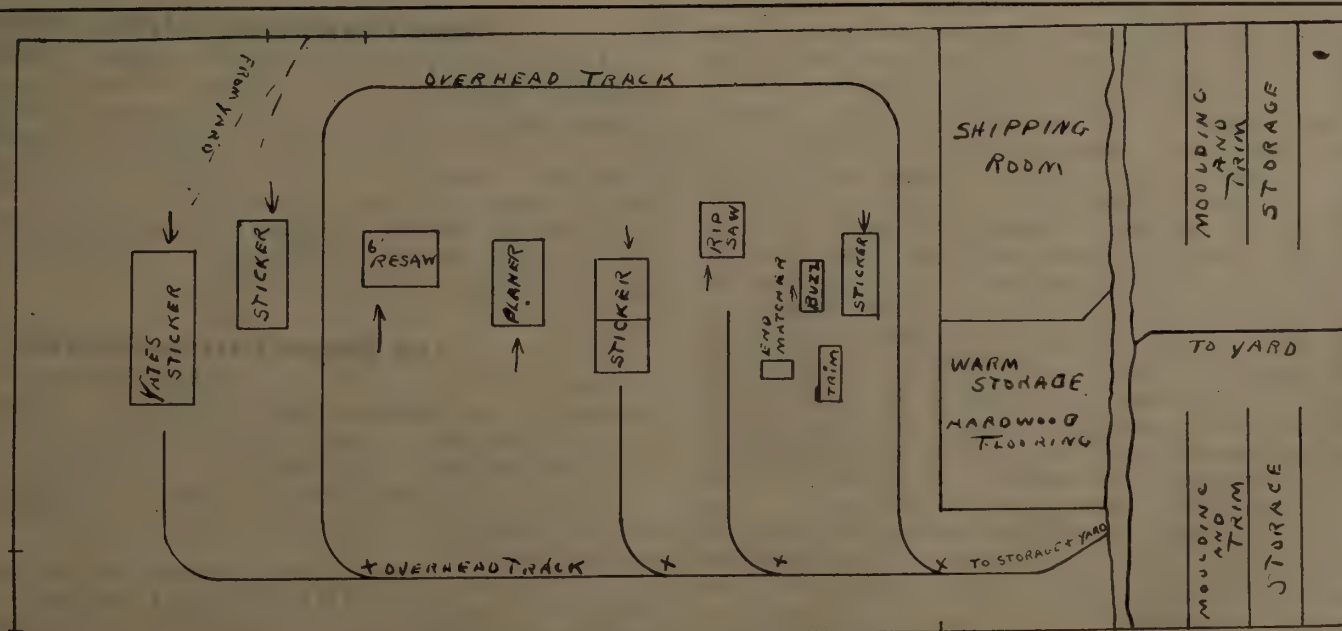

Type of equipment used with overhead carrier

edgings on the floor or even a small pile of lumber or other material does not interfere with the moving of the work as it would were the trucks employed.

The overhead carrier system is capable of wide development and may be used in any woodworking and furniture factory. It can be installed on a small scale and gradually extended to touch every machine in the factory.

With such a system a good idea might be to have a central parking area where all loaded trucks could be placed until required for the next operation. This is possible, as a loaded truck from the centre of the parking area could be readily picked up and placed where desired. If this were done the space around the machines would be kept clear and production aided.

Layout of overhead carrier in Watt milling plant

Keeping Tab on Ontario Timber Cut

At the recent representative gathering of the Northern Ontario Development Association held at North Bay, W. F. V. Atkinson, chief forester of the Spanish River Pulp and Paper Mills, Sault Ste. Marie, Ont., moved the following resolution in regard to the conservation of the forest resources of the province which was adopted:

Whereas the re-organization of the natural resources of our country, and more especially, this province of Ontario, are now imperative, in order to secure the maximum benefits for their owners, who are the citizens of this province, and

Whereas the methods heretofore employed in the administration of the public forests in this province are not now sufficient to produce the required need, and

Whereas the very best methods should be employed for this purpose, which can only be determined by careful study of local conditions by a permanent and efficient staff of duly qualified officers,

Therefore be it resolved that the Government be requested to take the following steps to this end:—

First—That the entire woods administration be transferred to the control of the Provincial Forester, and a staff of experienced and technical men, thus concentrating the management of the forest resources in the hands of a single branch, who are technically qualified for such important duties. This will provide for the carrying on of a duty for which no provision to-day exists, namely the supervising of the timber-cutting, and the ensuring of permanent productive forests.

Second—As a temporary measure, the appointment of a Forest Advisory Board, similar to the New Brunswick Board, consisting of three government members, and two representatives of the Wood-using Industries, to have full authority over the selection and appointment of all Fire Rangers, Timber Scalers and other employees, thus ridding the staff of patronage interference, and securing discipline and efficiency.

Third—The drafting of a plan, by which a permanent forest staff, under the Provincial Forester, be created to become effective within twelve months; the employees of this service to form a definite part of the Provincial Civil Service, absolutely devoid of any political influence, and to be continuously employed, depending on their efficiency and integrity only, and securing to them on disablement, an adequate pension.

Fourth—That the first duties of the proposed Forest Service shall be to obtain, by the best methods available, a preliminary estimate of the merchantable forest stand in the Province, as a preliminary basis for future regulations.

Lumbering Activity All Along the Line

The last issue of the Labour Gazette, Ottawa, says a considerable number of men were supplied for surrounding lumber camps from Halifax. The lumber companies at New Glasgow increased their woodsmen, but a slackening in activity occurred around Christmas. At Sydney a demand for men for the woods was noted. Charlottetown reported lumbering quiet, a large number of lumbermen being transferred to the woods in New Brunswick. At Campbellton the lumber camps were reported well supplied with men. Lumbering operations showed great activity at Fredericton, with a decided shortage of help. Bathurst also reported increased activity, with demand for lumbermen for logs, pulpwood and ties. Quebec reported the surrounding lumber camps in full swing, with a scarcity of men. At Sherbrooke also the lumber camps and some of the sawmills were very busy. From Ottawa and Hull a number of men went into the woods, somewhat relieving the labor shortage. Peterborough reported lumbering operations more active than for some years. A new mill started at Lakefield. The camps are very busy, many men and teams being employed. The lumber camps near Owen Sound were busy. A big demand was reported at Port Arthur and Fort William for tie makers, experienced bushmen, pulp cutters and loggers, experienced men being difficult to secure. A demand for men for the lumber industry was reported from points in Manitoba, Saskatchewan and Alberta. At Dauphin experienced bushmen and men to cut cordwood were required. At Lethbridge lumbering was reported good with normal supply of men.

At Cranbrook few vacancies existed for the lumber trade, but men were wanted to cut pulpwood logs. Fernie reported continued activity in the lumbering industry, with demand for swamper. The past nine months was reported to have been one of the most prosperous periods for the industry for many years. Plenty of men were available, though for various reasons they seemed unwilling to remain in the camps for more than a month or so. At Nelson, Trail

and Rossland activity was reported. At the beginning of the month there was some demand for labor, but later there was no scarcity of help. A very busy season was anticipated. A demand for loggers was reported from Kamloops and Vernon following milder weather. New Westminster reported that the sawmills were very busy until ice in the river stopped operations. At Vancouver the lumbering trade was not very busy, some camps closing down for winter, but others still operating. Saw and shingle mills were busy but found difficulty in getting cars to ship the goods ordered. At Prince Albert the sawmills were temporarily slack. Nanaimo reported lumbering generally active, but at Victoria the lumber industry was reported as continuing to give good employment.

More Sawmills Needed in the East

Some few weeks ago Mr. Chas. Harnish placed his forest lands in the hands of Mr. Chas. Corbitt and Mr. Arnaud for sale along with many others, says a recent despatch from Annapolis Royal, N. S. During this time Mr. Harnish's property changed hands. Some people claim that if forest land changes hands in the next five years as it has been changing there will be no wood or timber available. In this connection Mr. Corbitt says: I have a block of wood and timber land five to six miles from the town. The main post road goes through the centre of it. There is enough growing wood and timber to rot down five sawmills, four pulp mills and three stove mills, and will be enough small growth of wood or timber left for the next three generations. What we want is some more smart men in our place and a saw mill every five miles apart."

Would Prohibit all Pulpwood Exports

An effort to get the Government to prohibit the exportation of all unmanufactured pulpwood to other provinces or in the alternative to put a Royalty or duty on such export, was made in the Quebec Legislature by Fabien Bugeaud, of Bonaventure, and supported by W. R. MacDonald, of Pontiac. Hon. H. Mercier, Minister of Crown Lands, said that the matter was an important one and required careful study and a survey of the situation, after which the Government would take proper action to protect the interests of the province.

Eyes Directed to Canadian Spruce Forests

W. P. Hinton of Winnipeg, vice-president and general manager of the Grand Trunk Pacific Railway, in a recent address in Chicago, said that more mills are necessary to relieve the present shortage of newsprint paper and that the mills would not be built in less than two years.

There is no lack of pulpwood in either Canada or the United States at present, Mr. Hinton declared, and added that "great inroads are being made in the forests. As the trees are cut the source of supply recedes into the North and haulage to the mills becomes greater and expense of manufacture consequently is increased.

"The present crisis is turning the eyes of capitalists to the spruce forests of British Columbia and to the practically exhaustible pulpwood supply along the Fraser River. These pulpwood forests are unbroken to the Arctic. Considerable pulp already is manufactured in the province, but most of it goes to Japan."

Urges Government Shipping Policy

A provincial government shipping policy under which British Columbia would export her lumber and other natural products to foreign markets and not, as now, be subject to dictation from San Francisco and Seattle shipping interests, was urged in the B. C. legislature recently by Mr. M. B. Jackson, Liberal member for the Island's riding. He made a plea, too for conservation of the timber wealth of the country, claiming Canada is annually cutting more than nature is annually replacing. A provincial scheme of land clearing also was advocated by him.

New Harbor Rates on Lumber

The following are the new Montreal Harbour rates on lumber approved by an order-in-council. All the rates on merchandise have been advanced, the average increase being 20 per cent.:

Cordwood, slabs and other firewood, 10 cents per cord.

Timber and lumber, hewn or rough sawn, 15 cents per 1,000 feet board measure, or \$2.50 per carload when handled by rail and measurement unknown.

Timber and lumber, planed and finished (except as otherwise specified), 20 cents per 1,000 feet board measure, or \$3.00 per carload when handled by rail and measurement unknown.

Railway ties, 30 cents per 100 pieces of 8 feet length.

Railway ties, 60 cents per 100 pieces of 16 feet length.

Development in Quebec Housing Scheme

In a previous issue attention was called to the Quebec Government scheme for erecting workmen's dwellings and providing garden cities, and the difficulties which were encountered, largely owing to opposition in Montreal to the regulation framed under the act. Canada is vitally interested in all plans which were made for better housing and which will provide for the undoubted shortage in house accommodation; while it is obvious that lumbermen are also interested in such schemes providing as they do a market for a large amount of lumber.

The difficulties referred to above have resulted in the Quebec Government scheme being discarded, and numerous amendments made to the law with the object of simplifying the procedure, and abolishing the elaborate machinery set up, which it was found, retarded the expeditious construction of homes. The technical commission appointed to carry out the provisions of the act now disappears, and with it the levy of 2½% based on the amount of loan to the town or city, which was required to meet the expense of the commission.

The Government will now simply allot the amount of the federal grant to the municipalities, and leave each municipality the absolute control of the construction of the buildings and the full responsibility which the work involves. In turn, the municipalities will make loans to individuals or housing companies. The security for the loan to the municipalities will take the form of bonds at 5% taken *at par*.

Provision is made whereby a municipality may appoint a commission to do the work for any length of time and delegate to such commission all or any part of its powers. The bill permits of the construction of a tenement consisting of three dwellings at a total cost of \$13,500. A clause to this effect was put in at the request of the city of Montreal, with a view to make sure that "flats" of three storeys could be erected and would receive the financial assistance under the act. According, however, to Mr. T. Adams, City Planning and Housing Advisor of the Commission of Conservation, the federal grant, which will be distributed by the provinces, cannot be used for three "flats", so that there will apparently be a conflict between the Federal law and the Quebec provincial law on this point. It is a vital point inasmuch as in order to make workmen's dwellings a financial success, it will be necessary, except in exceptional circumstances, to erect three storey tenements. According to Mr. Adams, building under the Federal law will mean an outlay of 12% on the part of those who want to build,—a very high rate of interest which does not seem hopeful for the extensive construction of workmen's dwelling.

Continuance of Lumber Exports is Vital

The statement made by the Board of Commerce counsel in Winnipeg that Canadian lumber supplies are being depleted to the famine point by shipment to the U. S. is denied by lumbermen in the East. Any suggestion that lumber export to the States be restricted will meet with strong opposition.

E. H. Lemay, of Montreal, one of the largest exporters of Canadian lumber stated recently that any restriction of export to the States would mean restriction of output and would sound the death knell of the lumber industry in Canada.

"The United States is not the only market that Canada is shipping to," Mr. Lemay added. "Our firm also ships heavily to the United Kingdom and to every big port in South America. Canada could not begin to consume a fraction of the lumber her mills turn out. Were we to be curtailed in our shipments to the nearest market we would soon be in a position where we could not compete in the overseas markets. Lumber is one of Canada's basic exports and the continuance of our export trade in this commodity is vital to her economical existence."

A comparison of last year's total lumber export in the Montreal Board of Trade handbook reveals an interesting situation which gives rise to the present agitation. Canada shipped in 1919 144,375,152 feet of lumber, which is 85 million feet more than the 1918 total and the highest export since 1905. To ship this lumber required over fourteen thousand freight cars.

Perfection Hollow Blast Grates

The Perfection Hollow Blast Grate Company of Indianapolis, Pa. whose advertisement appears in another column is not really a new concern, but the old company reorganized for the exclusive purpose of caring for the increasing demands of that branch of the business of the Machinery Clearing House, whose manager is also the original patentee and owner, and is also one of the largest stock-holders. The company is now arranging to keep a stock of all sizes on hand for immediate shipment, as the iron market is so uncertain that it has been almost impossible to secure castings at any price. The

firm established a new uniform price as low as it is possible to provide service that is up to their requirements.

The recent coal scare has created an unprecedented demand for Perfection Hollow Blast Grates. It is estimated the saving of coal on such bars now in use will amount to \$10,000,000 a year, and, at the same time, turn over for domestic purposes enough wood to supply 100,000 families. This puts that much value into the manufacturers' pockets who are fortunate enough to have a set installed. Such a source of conservation would appear to be well worth looking into.

Acquire Large Acreage of Forest Lands

The Long-Bell Lumber Company of Kansas City, Mo., has practically completed the purchase of a large acreage of Fir forest lands from the Weyerhaeuser Timber Company, of Tacoma, Washington. This timber is located in Cowlitz and Lewis Counties, Washington, and is reputed to be as fine a stand of fir as there is now in existence. In buying this tract The Long-Bell Lumber Company is looking well into the future, preparing its position as the largest lumber manufacturer.

This purchase will increase the white pine and fir stumpage holdings of the Long-Bell Lumber Company in Washington, Oregon and California to 234,000 acres, their Pacific Coast interests including the control of the Weed Lumber Company of Weed, California.

Transfer Timber Bonus is Raised

An order-in-council has been passed by the Quebec Government raising the transfer bonus for timber limits to \$20 per mile or fraction of mile. The order as published in the Quebec Official Gazette reads as follows:

"Whereas the transfer bonus for timber limits is presently of \$4 per mile or fraction of a mile, and that it is expedient to increase it,

"It is ordered that the transfer bonus for timber limits be increased from \$4 to \$20 per mile or fraction of mile."

Probate of Lumberman's Will

The Toronto General Trusts Corporation has applied for probate of the will of John Henry Eyer, a Toronto lumberman, who died on February 1, leaving property valued at \$70,288.

Holdings in the Eyer Lumber Co. are valued at \$28,000, and his home at 602 Avenue road at \$23,200. Jane McBeth Eyer, a sister, receives a life interest in \$15,000; the widow, Mrs. Ida Eyer, household goods and personal effects and a life interest in the residue so long as she remains unmarried. In the event of her marrying again she is to receive \$1,000 a year.

The residue of the estate is left to two children, Bruce and May Eyer.

An Ideal Timber Condition Pictured

That Canada could go far in paying all taxation by the output of her gigantic forests and the proper conservation of same was demonstrated by a discussion by the Dominion Land Surveyors at a session of the annual meeting in Ottawa following a paper read by H. Claughton-Wallin, F. E., of the forestry branch. It was stated that in the Jura mountains, in France, where the commune owns the large pine forests, that the residents there live free of taxation by the output of timber and the sale of firewood. The same also applies to parts of Sweden, and it was pointed out that Canada's resources in this respect were equal, if not better than these countries.

New Wharfage Rates Not Well Received

The new tariff of wharfage rates for Montreal which have been put into force by an order in council, have not been well received locally. Business interests affected by the new tariff strongly opposed the general increase of 20 per cent., and measures were taken with a view to show that the new rates would be detrimental to both the exporters and importers of the port. The chief ground of complaint is that the rates have been put into operation without those affected being given an opportunity to state their case fully. The advances, it is complained, are unjust and excessive, and are not warranted by the general trade situation. Steps are being taken to put the case fully before the Minister of Marine in the hope that some modification at least may be obtained. It is claimed, on behalf of the Government and the Harbor Commissioners, that an increase is necessary owing to ever-mounting general costs. The lumber trade is largely interested in the new tariff as the wharfage charges for lumber have been considerably increased.

Improvements in Conserving Western Timber

The reforestation of logged-off and burned-over lands in British Columbia on a scientific basis will be one of the chief tasks of his department this year, according to a statement by Hon. T. D. Pattullo, minister of lands. Closely allied with this work in forest protection, and the minister said he was pursuing actively the installation of wireless telephones and wireless telegraph services. Negotiations are still being carried on with Ottawa with regard to airplane patrol and when proper arrangements are completed a chain of defence against fire will be effected. The forestry administration is being greatly strengthened.

Hon. Mr. Pattullo expects an increase of \$100,000 in the revenue of the lands department over the estimates of last year, or actually \$400,000 more than the revenue of last year which was greater than the estimates of the year by \$600,000.

The building up of permanent markets, foreign and domestic, will receive a great deal of attention, he stated, and every effort will be made to place the lumber industry on a basis which will ensure the continuation of the prosperity of the present. The minister referred to present markets as more or less unstable and said that the industry would never be on a sound basis until regular markets have been established.

"We must be able to accept orders from, say, Japan, Australia and Great Britain at any time, knowing that we can fill them without delay. If we establish the fact in the Orient that British Columbia Douglas fir is the best wood to be had for various purposes we create a standard and must be in a position to supply a given market's demands," said he.

English Oak is Reported Cheap

The State is encouraging the home grown timber trade in England by all possible means. The Chief of the Disposal Board of the Timber Supplies Department says that there is no likelihood of cheaper timberland in England before next summer. Every effort is being made to develop to the fullest extent the use and consumption of home-grown timber and especially to emphasize the value of British oak, elm, beech and other native hardwoods. At the present time British oak is almost cheaper than softwoods. The Chief of the Disposal Board states that the Housing Department has given an order to the Timber Supplies Department for Oak for window frames, etc., in 1000 houses, and that the Board of Trade has circularized railway companies requesting them not to use anything but English oak for certain specified purposes. The Port of London Authority has purchased a large quantity of elm for covering the quays, and the City of Nottingham has recently given a large order for native wood for street paving blocks.

Canada Metal Company Men in Convention

Forty-five salesmen gathered recently at the head offices of the Canada Metal Co., Limited, in Toronto, to attend the annual convention. This institution has become more important and far-reaching in its benefits and results with each succeeding year. It was in 1911 that the first sales conference was held. At that time the staff was comparatively small and the business of the Canada Metal Co. had not attained the national proportions and large volume which characterize it to-day. The year closed has been the biggest and best in the history of the company. W. G. Harris, president and manager of the organization, extended a cordial welcome and said that it was a great pleasure to meet once more the representatives at the home office. He wished to impress upon all that their watchword was service and it was upon the foundation of service that the Canada Metal Company's splendid business had been built.

Mr. Wm. G. Harris, Jr., vice-president, presided at the business sessions, and delivered a pointed and effective address along the line of efficiency. He stated that the gathering was a sales promotion convention and spoke of the value of constructive criticism in the building up of a bigger and broader business, adding that they should all resolve to make 1920 a year of progress and expansion. The business of the company he said, had grown rapidly until they were now the largest dealers and manufacturers of white metal alloys in the Dominion of Canada.

At the various sessions many leading topics were discussed and practical demonstrations given in the manufacture of sheet lead and lead pipe. The salesmen were shown the pure pig lead being melted and poured into slabs, and the different stages of rolling sheet lead to different thicknesses. Various tests were made to demonstrate why the Canada Metal Co., Limited, are able to guarantee uniform quality and thickness.

In the evening the whole staff was entertained to dinner at the Queen's Hotel, and subsequently, Mr. Harris, Jr., made a presenta-

tion to every one of a life insurance policy. He stated that this move was a slight token of appreciation from the firm for the loyalty of its managers and salesmen and to commemorate the largest year's business in the history of the company.

Votes of thanks were passed unanimously to Mr. Harris, Sr., and to Mr. Harris, Jr., for their kind consideration to the employees. A similar expression of esteem was tendered to Mr. H. C. Crow for the able assistance he had given to the managers of the branches and the salesmen during the past year. This resolution was supported by both the president and the vice-president of the company. On another evening a most enjoyable theatre party formed the attraction.

On the following day the usual presentations were made to the winners of the various sales competitions. Mr. L. J. Martin and Mr. Willis were first and second in the general sales competition. Mr. White from the West was successful in winning first place for the Harris Heavy Pressure Sales Competition and received a handsome gold watch and chain, Mr. Garrett, who also hails from the West, was second in the contest.

Each day of the convention was filled with practical demonstrations and a few hours were spent in the nail plant, under the guidance of the superintendent. It was explained to the visitors that even though 50 tons of nails were being turned out every twenty-four hours, yet it was impossible to keep up with the orders. Nails varying in size from 3/8 in. up to 8 in. were made on the different machines in the presence of the salesmen. Other interesting features were wire drawing, making staples and bale ties.

Will Wage War on Pine Beetle

War has been declared by the forest branch of the department of lands on the pine beetle which has for years been carrying on its destructive work in certain sections of the interior of the province, according to a statement made by Hon. T. D. Pattullo, Minister of Lands for British Columbia.

Mr. Ralph Hopping, an entomologist who has had wide experience in fighting the pine beetle on both sides of the international boundary, has been loaned temporarily to the province by the entomological branch of the department of the interior at Ottawa, and Mr. Hopping is now on the ground directing operations for the curtailing of the energies of the bug, and, it is hoped, for its ultimate control.

The beetle bores its way through the bark of the green pine; works its way upward in the sapwood depositing eggs at intervals as it goes. The larvae then tunnel laterally for a few inches then remain dormant until fully developed when they bore their way out through the bark and attack untouched trees.

Producing two broods each year, they multiply rapidly and kill many trees in a year as they have no taste for timber that has been already encircled by their progenitors.

In the affected areas salvage work is now being carried on by cutting down the sound timber and arranging for the burning at the proper time of the green slash, which is a favorite rendezvous of the bug. The forest branch has tackled a big job, as the bug is strongly entrenched in certain areas, but a thorough campaign is being planned and it will be carefully and systematically carried out.

Large Timber Tract Changes Hands

A large timber deal was recently completed in the purchase by Messrs. Bloedel, Welch & Stewart of a considerable tract on Vancouver Island just north of Union Bay. Half a million dollars is said to have been the price paid. The tract, which is held under crown grant, consists of 6000 acres and the fir and cedar timber available is said to average 40,000 feet per acre. It is a railway proposition and three miles of line will be put in to transport the logs to tidewater. Camps are now being constructed and by April 1 it is expected that 100 men will be on the payroll. The new camp is almost opposite Myrtle Point, on the east side of the Gulf of Georgia, where the same concern has for some time carried on a large logging enterprise.

First Permanent Wooden House Building

The first permanent wooden house under the new building scheme was completed and occupied near Norwich, England. The house was erected by a Norwich firm which has converted its aircraft factory into a workshop for making standardized sections for these houses. The manufacturers state that they will be able to turn out similar houses at the rate of 50 per week. The total cost, providing for six rooms, is about \$3,275 (at normal exchange) and such houses may be completely erected within one month.

Why Short Lengths Should Be Used

Owing to Lumber Supply Being Below the Demand
and Likely to Continue for Some Time

During the few years that preceded the war, much was said at lumber gatherings and in lumber journals, about the necessity for using short length lumber, principally for purposes of conservation of the forests, says the "Gulf Coast Lumberman."

The manufacturers talked a good deal about it, and whereased and resolutely that the dealer ought to buy and use a certain amount of short lengths, but no genuinely intelligent effort was ever made to bring the use of short lengths into anything like favor with the dealer.

They tried to get rid of a certain amount of short length stock in flooring, etc., by specifying in the grading rules that the mill would be permitted to load a certain percentage of less than 10 foot lumber when an ordinary 10 to 20 foot order was placed. This, of course, was bad business and not sound legally, because you can't make any man take or pay for anything not specified in his order, and the mills were practically powerless to enforce the rule book suggestions, because the buyer controlled the market consistently for years, and dictated the policy.

But the high priced markets of the past year have done more to bring short lengths into favor than years of education or centuries of arbitrary loading rules could possibly have done. In the good old days when any desired length of B & Better sold for about what planing mill refuse costs nowadays, the dealer had no incentive to buy short lengths. He was satisfied to buy long lengths and saw them up where short lumber was needed.

But the fact is that in every frame structure there is a large percentage of lumber that must be short length, such as the siding and boxing between the doors and windows, etc. In some houses where there are lots of windows, the short length lumber in the house averages considerably more than 50 per cent. of all lumber used. It stands to reason, therefore, that if short length lumber is needed, short length lumber will be purchased and used in times like these when lumber is scarce, particularly if the mills will make it worth the dealer's while to handle it.

At the present time lots of mills are shipping short lengths in cars calling for assorted lengths, and the dealers don't like it worth a cent. They take it and stand for the deal, paying the same price for the shorts as for the long lumber, because lumber is so hard to get that they have no choice in the matter, but it is not good business, and in the long run won't pay the man who plays the game that way.

This is a time when short lengths should be used as much as possible because we have a lumber supply that is below the demand, and is likely to continue that way for some time to come, but short lumber is not worth as much as long lumber, and when arbitrarily shipped is a car that calls for assorted lengths of stock, the short lengths should be invoiced at a price commensurately less than the price of the long lumber.

To make a dealer take short lengths that he does not order, and pay the same price for them as for the long lengths, is pure piracy, and will react on the fellow who does it, just as certain as certain can be.

Dealers everywhere are placing orders for short length lumber, and buying quantities of it at short length prices, and it is teaching them economy and thrift. There is no reason why short lengths should not always be utilized where they can be used to economic advantage, and it is safe to say that as a result of the present market situation their use has come to stay.

But the fellow who sells one thing and ships another simply because the buyer is hard up for the stock and can't help himself ought to change his methods, and change them quick. Short lengths are a valuable building commodity. They are honest and legal. They should be treated as such, and not rammed down someone's throat without his consent by main strength. They should be listed on the order, fairly priced, and the deal should be open and above board.

Shingle Trade Had Satisfactory Year

Had the supply of cars been up to the average of normal times during the last two months of the year, the statement was made recently that the shingle output in British Columbia for the year would have created a new record. As it is, it is expected that trade will come close to equalling the record of 2,250,000,000 shingles, which was established in 1917.

Prices during the year have taken a material jump. At this time last year quotations on the different grades ranged from about \$3.15 for 3x to \$4.50 for perfections, while today the figures are around \$6.50 for 3x to \$9 for perfections.

Were there sufficient cars to handle shingle shipments to the

other side of the line, the exchange situation would be materially helped, says a well known Vancouver authority, who points out that following the recent shipment of \$10,000,000 of Canadian gold to Chicago, the rate dropped three per cent. on the following day. There are hundreds of thousands of dollars worth of shingles piled up in British Columbia mills awaiting cars. A large percentage of the mills are closed and until cars are available to take away the present cut there will be no prospect of opening up.

At a meeting of the shingle manufacturers held lately, it was decided to change the packing system to make four bundles pack to cover 100 square feet of roof. Formerly shingles have been put up a thousand to the bundle which would make a square and a quarter. It was pointed out that all other roofings are sold on the square basis in conjunction with the producers south of the line. The new system will be in effect about April 1.

It will mean that 16-inch shingles will be packed 22-22 courses instead of 25-25 as at present and the recommendation will be made that they be laid 4½ inches to the weather. Eighteen inch shingles will be 18-18 instead of 20-20 and perfections 25-25 with weather exposure of 5½ inches. The new method will necessitate no change in machinery equipment.

New Argument in Lath Salesmanship

The dealer was contentedly munching a stick of chewing gum of his favorite flavor, and ruminating on the advisability of buying some stock for his yards.

Enter a live wire travelling lumber salesman:

"Good morning, Mr. Dealer," said the salesman. "Can you use a car of good lath?"

"Sure I can use 'em. Got some?" replied the dealer.

"Yes."

"What are they worth?"

"Sixteen dollars a thousand delivered."

"Sixteen dollars," shouted the dealer. "Why that's nearly two cents apiece!"

"Well," calmly asked the salesman, "what's wrong about that?"

"Too much," briefly commented the dealer.

"No it isn't. Now listen. You don't think anything of paying a cent for a little stick of chewing gum about three inches long, less than an inch wide, and an eighth inch thick, chewing it for half an hour and then tossing it aside. Why kick over paying two cents for a lath—a piece of lumber four feet long, an inch and an eighth wide and three-eighths of an inch thick that will last for years?"

"Say, young man," said the dealer, "I never thought of it in that way before. I guess you are right."

And right there the sale was made.

That was good salesmanship on the part of the travelling lumber salesman, but the point we are interested in is calling the attention of the dealers to the fact that that sort of salesmanship is good for them to use with their customers. The consumers are pretty apt to not see the analogy between lumber and many other commodities for which they freely pay money, and that are not nearly as serviceable as lumber.

There are many ways in which the dealers can meet the complaints of customers about present prices of lumber, which, while they are higher than they used to be, are low, compared to the prices of most other commodities.

Just remember there is an analogy between chewing gum and lath.—"Retail Lumberman."

Cut Around Thessalon Same as Last Year

The Hope Lumber Co. of Thessalon, Ont., report that last fall they encountered wet weather in logging, causing delays as well as an increase in costs. The labor situation has been a rather difficult problem as the company say that they did not secure the efficiency and cannot get the amount of logs put up that they should, while wages and the outlay for provisions are much higher than last year. All this makes the cost of operating considerably above what prevailed twelve months ago. The Hope Lumber Co. figure on getting out about the same amount of stock as last year, about six months' cut of ten hours daily at the mill. Mr. C. N. Carey, manager, states that there will not be an enlarged production of lumber at the mills in Thessalon this year and that prices will be high as the outlay for operating is so much above that of 1919.

"I'm bothered with rats," said Mrs. Casey, owner of the boarding house, as she talked over the back fence with her neighbor.

"Did yez buy any of thim rat biscuits for them?" suggested Mrs. Kelly.

"Now, Mrs. Kelly, what kind av a house do you think I'm runnin'? Sure, if the bastes can't ate what the rest of us do, they kin go hungry."

Eastern Lumberman Will Extend Operations

A provincial charter has been granted to W. D. Midmer Limited, Napanee, Ont. The authorized capital is \$100,000 of which \$40,000 will be seven per cent. cumulative, redeemable preferred shares. The object of the company is to trade as lumber manufacturers, merchants and dealers in building supplies and to acquire the business of W. D. Midmer, Napanee, and to carry on the same without any change in management. In a recent prospectus issued by the new company the following interesting facts are set forth:

The exceptional condition of the lumber industry, and immense amount of business now being offered to Mr. Midmer, with the prospect of greater demand and higher prices, led to the formation of the company for the following purposes: To obtain our own supply of lumber at first cost, by logging, and purchasing logs and standing timber. To establish saw mills and factories for the manufacture of lumber, lath, hardwood flooring, boxes, and certain lines of furniture. To carry out this plan, and to secure room for development, a freehold site of ten acres has been purchased on West street, near the Canadian National Railways, and sidings will ultimately serve the property, thus securing ideal shipping conditions for extensive business.

During the past two years Mr. Midmer's business has increased about five hundred per cent., and from present indications it appears this rate may be continued for some time. The existing plant at Mill and East streets is in first-class shape, much new machinery having been added. It has both water and electrical power, the combination giving about one hundred horse power, and it is intended to continue the retail business here, as the earnings of this plant have been sufficient during the past two years to pay seven per cent. on all preferred and common shares of the company.

The retention of the retail business down town will leave the new site clear for saw milling, kiln drying, floor manufacturing, and other heavy work, for either wholesale or export, at a low shipping cost. It is estimated that by dealing with timber in the way proposed there will be little waste, and the shavings and other refuse will provide steam for drying and power to operate a great part of the plant, which should prove very remunerative to the company.

New By-products from Douglas Fir

A new industry for British Columbia which, according to its advocate W. C. Oliver of the Douglas Fir Turpentine Co., of California, promises to have most wonderful possibilities, is being considered by Hon. T. D. Pattullo and the experts of the Forests Products Department.

The Douglas fir, which Mr. Oliver describes as "the most valuable economic timber in the world and one of the prime assets of British Columbia," can, he declares, be made to produce hundreds of millions of dollars worth of turpentine, resin and other by-products while at the same time the timber growth of the tree can be enormously accelerated.

Lumber Commissioner in New Quarters

William Robertson, B. C. Lumber Commissioner, is now located in his new offices on the ground floor at No. 1 Adelaide St. East, Toronto, where he has greatly enlarged quarters. The walls of the outer office or display room have been wainscotted with Douglas fir set with three ply, rotary sawn veneer panels of the same wood, making a most effective and attractive interior decoration. There is also a fine show window in which samples of B. C. forest products will be exhibited. The B. C. booth at the Canadian National Exhibition, Toronto, last fall was a striking and admirably arranged one and the directors awarded the Commissioner a diploma and gold medal both of which are now shown in the window of Mr. Robertson's apartments. He intends carrying on considerable propaganda work in connection with his department.

Pulpwood is Commanding Higher Prices

There has been a great increase this year in the cut of railway ties, cedar poles and pulpwood. Anything in the line of forest products is becoming exceedingly valuable by reason of the high prices commanded on every side. Naturally, the figure for pulpwood in Canada has jumped considerably and the prevailing quotation in Ontario for rough spruce per cord, f.o.b. cars, at all points south of North Bay, is \$10.00, whereas a year ago the figure was about \$8.50. Rough spruce wood is bringing \$7.50 per cord at Cochrane, which is nearly 500 miles north of Toronto. This lessened figure is owing to the higher freight rate. As the freight charges decrease by reason of location nearer the mills, so the price for wood increases. Considerable poplar is being cut this season and, in peeled form, is bringing \$10.00 per cord. Peeled spruce and balsam in old Ontario are commanding \$14.00 to \$14.50 per cord, f.o.b. cars at shipping point.

Among the firms handling a large quantity of pulpwood is the

Thompson & Heyland Lumber Co. of Toronto, who expect to purchase 20,000 cords this season. About one-third of this will be peeled wood. Mr. Heyland recently spent a few days at the plant of a large paper mill in Pennsylvania which makes book paper for a number of leading publications in the United States and is using hardwoods in the manufacture of pulp. In a large pile of some 20,000 cords Mr. Heyland states that fully 80 per cent. of the wood was beech, birch, maple, elm and second growth pine. At the request of the consumers the Thompson & Heyland Co. will send several cars of Ontario beech, maple, birch and swamp elm to Pennsylvania where experiments will be conducted as to its suitability and value in making book paper pulp. Of course, this wood is considerably harder and grown in a colder climate than that which is at present employed in the neighboring State, but it is felt that the experiment of using Northern hardwoods will be, at least, well worth trying out.

There is quite a large call for poplar at the present time. With the growing scarcity of pulpwood, attention is being more and more directed to poplar, which is of rapid growth. Trees of merchantable size are produced from the seedling in about twelve years, whereas in the case of spruce it requires many times this period to grow a tree that is, in any way, large enough to make use of in pulp production. Poplar at present brings about 1/3 less than the prevailing price for spruce, and in old Ontario it will constitute a fair percentage of the quantity which is being handled by the Thompson & Heyland Lumber Co.

Death of Mr. G. Plunkett Magann

Pneumonia resulted in the death recently of Mr. George Plunkett Magann, of Toronto, in his 71st year. He was a widely known and progressive lumberman, contractor and manufacturer, who although born in Dublin, Ireland, spent the greater part of his life in the Dominion. His early associations were with the lumber business and in later years he carried out many important contracts on work in connection with the Grand Trunk and Canadian Pacific railways and also for the Federal Government. The late Mr. Magann owned large timber limits in Ontario and the United States and at one time operated several sawmills in connection with his business. He was president of the Magann-Hawke Lumber Company; was one of the promoters of the Anglo-Canadian Mining Exchange, and was chief promoter of Canadian Builders, Limited.

He was a member of the Canadian branch of the United Irish League and was at one time spoken of as a prospective Senator.

Some time ago Mr. Magann was made a life member of the R. C. Y. C. He was also a member of the Toronto Hunt Club, the Knights of Columbus, and the Hamilton Old Boys' Association, of which he was a Past President.

He is survived by his widow, two daughters, Mrs. Ponton Armour, and Miss Esme Magann, and two sons, Messrs. George and Allan Magann.

Mr. Proctor Passes Away Suddenly

The sudden death, from pneumonia, of Mr. J. K. Proctor, of Wyncote, founder and for many years president of The Philadelphia Textile Machinery Company, and originator and inventor of the well known "Proctor" Dryers which occurred at Ocean City, February 11, 1920, has been a great loss to his many friends and business associates. Mr. Proctor is survived by his widow, Mrs. Sarah Jane Proctor, and two daughters, Mrs. A. D. Wallis and Mrs. L. B. Sain, both of Wyncote, and sixteen grandchildren.

In 1883 he founded what in 1885 became The Philadelphia Textile Machinery Company, now located at 7th St. and Tabor Road, Philadelphia, to build garment and other woollen machinery. By 1890 he started to design and perfect the drying system now known as "Proctor" Dryers, which have revolutionized the method of drying formerly used, and through which pass many of the products that are now in common use in this country, as well as abroad. Most of the smoking and chewing tobacco raised on this continent goes through this process, as well as many other products such as cotton, wool, hosiery, soap, paint, veneer, chemicals and clay.

Mr. Proctor was much interested in church work and for many years was actively interested in the Kensington Branch of the Y. M. C. A. He was much loved by all those with whom he came in contact.

Once an old colored man visited a doctor and was given definite instructions as to what he should do. Shaking his head he started to leave the office, when the doctor said:

"Here, Rastus, you forgot to pay me."

"Pay you for what, boss?"

"For my advice," replied the doctor.

"Naw, suh; naw suh; I ain't gwine take it," and Rastus shuffled out.

Review of Current Trade Conditions

Ontario and the East

Stocks growing lower all the while, more inquiries coming to hand and inability to supply even a small proportion of the needs sums up the tendency in the lumber situation during the past few days. There are many sizes and dimensions off the market altogether and some of the largest companies have not as much stock on hand as a live retailer in a fair sized city and will not have until the new cut starts to come on the market in May or June next. Prices are holding firm in all lines with the tendency of hardwoods to increase more perhaps than softwoods. In hardwoods, there is a decided shortage of dry stocks, particularly of the thicker sizes and in the upper ends. The call from implement firms, wagon builders, automobile and musical instrument manufacturers, is most insistent and inquiries for millions of feet are being daily turned down. Never was the search for materials of all kinds so active and never did carloads change hands so quickly. What limited stock is picked up is snapped up right away. There is no dearth of buyers and no cavilling over prices. The pronouncement is that "my figure is so and so and you may take it at once or leave it". The purchaser who hesitates for an hour or two and then rings up to say that he will take the stock at the figure mentioned, finds only to his dismay that it has been sold to some one else in the meantime.

There are many inquiries from across the border and shipments are going forward fairly well considering the shortage of cars, the recent storms have tied up the railway at certain points and embargoes that have been placed on freight at different locations. Stocks at all mills have been pretty well shipped out. Some talk with respect to the purchases of new cuts is heard and it is a trifle early yet to close any deals, although two or three are reported at a considerable advance over last year. The wholesalers are inclined to think that many of the mill men are asking an exorbitant figure and the latter respond that never were production costs so high as they are to-day, and never did they have to face so many difficulties and encounter such restlessness on the part of labor. Building programmes are proceeding apace in all the principle cities.

Eastern representatives report that very little B. C. material is coming through. Perhaps, in another month or six weeks, there may be some rough clears, flooring and ceiling available but so far as boards, shiplap and dimension are concerned, the business in this line is very slack and will be so for some time. A few shingles are moving and timbers have recently undergone a decided advance in quotations.

Retail yards are not buying much at the present time and are waiting to see how things develop in the building line this spring as many large projects are yet in advance. One yardman in a western town stated this week that he would not purchase any more for some time. "I have some thirty-five thousand dollars worth of lumber on my premises. Two years ago I had as large and representative a stock and the amount invested was only about fifteen thousand dollars and so I am going to mark time for the present" he added.

The daily press is filled with despatches from Ottawa and elsewhere in regard to the proposition of placing an embargo on lumber or otherwise restricting the export. It is stated that contractors and certain western interests have been complaining that dealers have been selling preferably to American customers who are willing to pay a very high figure for anything they can get their hands on, and then there is the additional inducement of the benefit of the rate of exchange which is running heavily against Canada at present, all shippers stipulating that they be paid in American funds.

It is thought that the Ottawa authorities have had enough trouble and dissatisfaction with the restrictions placed on newsprint paper to invite a repetition of any similar experience in the embargo line and, more particularly, at a time when Canada should become a greater factor in exports than in imports. If such a course is adopted it would result in repression on the part of the manufacturers of wood products and cause an incalculable loss. The lumber shortage is world wide and is just as acute across the border as it is in Canada and arbitrary regulation would not in any way ameliorate present conditions. Greater output will only solve the problem and this, all companies are seeking to carry out, even in the face of heavy odds. There has been no evidence of profiteering or unduly taking advantage of the existing famine.

The whole matter is ably summed up by a furniture manufacturer who recently stated:

"It appears to me that an embargo is not economically sound," "If it is right for Canada to place such an embargo, it is equally right for the United States to retaliate. We are dependent almost entirely upon the United States for hardwood used in Canada in the manufacture of furniture.

"We are popularizing birch, which is a splendid wood and plentiful in Canada, but we find that manufacturers follow the line of least resistance. Gum wood is easier to work. I certainly do not think it wise to advocate an embargo. The very large wood cutting this year will not be felt by the trade until next year.

"Manufacturers have been supplying the demand from their stocks and there is naturally a huge hole to be filled. Higher prices, of course, will stimulate production, for what has got to be supplied must be made this year. There will be no slump in prices for at least two years, I believe."

Great Britain

There has been during the past few weeks a decline in trade. January was a rather quiet month while the first part of February was a little livelier. Prices have been jumping by leaps and bounds and a policy of caution and reserve is being followed by most of the bigger buyers. They have become somewhat nervous about the high values that have been reached and wondering whether there would be a reaction. The result is that speculative buying has for the nonce ceased whereas, until recently, it created many transactions on the part of lumbermen who thought that they would get in ahead of the game. According to the "Timber Trades Journal," the end of the timber control has come and the government is now disposing of its stocks of timber to a syndicate of importers which has been formed to take over all softwoods, both landed stock and cargoes to arrive. The quantity of government hardwoods is small and can be easily disposed of. Railway sleepers which were bought last year by the Timber Buyer will continue to be delivered direct to the railways.

Montage L. Meyer, late Imperial Timber Purchaser has sent out a notice that, after the first of February, no sales of softwoods would be made by the Imperial Timber Disposal Section of the Board of Trade as arrangements had been made for the disposal of the whole of the Board of Trade timber stocks.

It will be extremely satisfactory to the trade to know at last that the authorities are dealing with the timber importers, and that the business of disposing of the Government holdings will be carried through on such terms as are likely to create the minimum of disturbance to the market. Naturally some reductions on current rates are likely to be made, but, on the other hand, when the goods are once transferred to timber merchants and are entirely out of the hands of the Government, a great sense of relief will be felt; and even if values should weaken a little for a time, the feeling of more security in the future will be ample compensation.

Speaking of recent advances an authority says: We have not yet reached the stage when a merchant cares to purchase battens at £40 to £42 in the expectation of turning them over at a pound or two advance in the course of a few weeks. It is not likely, however, that the quietness will last for long; values are extremely firm, and there is not the slightest doubt that an increase will have to be paid, and that we shall probably see still higher figures before open winter. The sawmills are extremely busy, and preparations are being made for the expected demand in the spring for the Government housing schemes. Great activity is reported in the retail business. Transport troubles are still most acute, and the old cry for more wagons is as loud as ever. In the Midlands many travellers are off the roads for the time being, as they state that until their customers get more of their old orders delivered they will not look at fresh specifications.

Exporters of timber abroad have time and again endeavored to explain how enormously the cost of production has increased during and since the war, but on the whole their explanations have been received with a shrug of incredulity by British firms. It is so easy to repeat the cry of profiteering when it applies to others. There has been an endeavor for some time past to impress on British traders that the Swedish and Finnish shippers have a case, and that the huge advances in the cost of timber are to be ascribed in a very great

The Pas, Manitoba.
Formerly The Prince Albert Lumber Co.,
Prince Albert, Sask. 1-8

Business Chances

Wholesalers Attention!

Advertiser has upwards of two million feet Jack Pine and Spruce, which can be logged and manufactured into lumber during the coming summer. To party who would finance operation attractive prices will be given. Apply Box No. 131, Canada Lumberman, Toronto. 4-5

TIMBERLANDS FOR SALE

We have many attractive properties listed with us, for sale, in all parts of Canada and Newfoundland, in both Freehold and Crown lands.

BRITISH COLUMBIA

Large tracts of Cedar and Spruce situated on tide waters and the larger rivers, with or without saw mills.

NEW BRUNSWICK

Some very fine Freehold hardwood properties.

NEWFOUNDLAND

More than 3,000 square miles of the best timbered pulpwood land in the Colony.

ONTARIO

Many pulpwood and hardwood tracts, both Freehold and Crown land.

QUEBEC

Some excellent Freehold properties running heavily to pulpwood. Large pulpwood limits on the Upper Ottawa and on the North and South Shores of the St. Lawrence.

Cruiser's reports and blue prints, where available, will be sent to Principals or their accredited agents.

R. R. BRADLEY

4 Hospital Street,
MONTREAL, P.Q.

FOR SALE—RETAIL LUMBER YARD and Mill, with small stock of lumber. Apply John Poag & Company, Hamilton. 4-7

For Sale

Sash and Door Factory and Planing Mill, located in one of the busiest and best towns in eastern Ontario. Correspondence solicited. Box 66, Canada Lumberman, Toronto. 23-t.f.

Table Slides

We want a representative in Ontario to sell our Table Slides to the furniture trade. If you are calling on the furniture manufacturers and want a side line, write us for particulars. Box 138, Canada Lumberman, Toronto. 4-5

Timber Limits and Sawmill For Sale

About 1,600 acres Timber Limits, situate in Haliburton County; no dues; consisting of Hard and Soft Woods. Also Sawmill on Limit. Capacity about 20 M ft. per day, and all equipment necessary for immediate operation, including Horses, Wagons, etc.

About 400 M ft. Logs at Mill, Hard and Soft Woods.
Apply Box 153, Canada Lumberman, Toronto, Ont. 4-5

Saw Mill Plant For Sale

Practically new and modern Saw Mill Plant, capacity about 30 Million feet per annum, located in the Interior of British Columbia on a beautiful inland lake and on the main line of the Grand Trunk Pacific Railway. About 500 Million feet of timber on and adjacent to Lake (about 90% Spruce) and another Billion feet available at reasonable prices. Natural conditions ideal for economical logging, manufacturing, piling and shipping. An advantage of about \$4 per thousand feet in freight rates to the Prairie Provinces over Coast shipments. This property offers unlimited possibilities as a lumber, pulp and paper property. Would consider selling a half interest. Terms reasonable.

A. C. FROST COMPANY,
134 South LaSalle Street,
Chicago, Ill. 5-t.f.

For Sale—Saw and Planing Mill

25 H.P. Engine, 50 H.P. Return Tubular Boiler, Good Saw Rig, etc., 24" Planer and Matcher, 18 H.P. Gasoline Engine, 2 Rip Saws, Tenon Machine, 1 Side Sticker, etc. Would sell Sawmill separate. Box 165, Canada Lumberman, Toronto.

FOR SALE

Hoop, Stave and Lumber Mill, including logs, yard, to wind up an Estate. Considerable timber within hauling distance and 7 branches of the G. T. R. leading to Mill Sid-ing for shipping logs by rail. Enquire of—

G. B. MERRITT, Executor,

Discovers Douglas Fir Sugar Trees

Prof. John Davidson's discovery of a rare specimen of sugar, scientifically known as melezitose, in a limited area in British Columbia, on leaf tips of Douglas fir trees is arousing considerable interest throughout the Province. Previous to its discovery by the head of the department of botany in the British Columbia University, melezitose was obtained only in Turkestan and Persia.

Prof. Davidson said that he first heard of the strange phenomenon in 1914. Stories had come from the interior telling of large gatherings of Indian tribes, who, during the summer would hold pow-wows for a month or more, depending on plants for their food. Answers which Prof. Davidson received regarding his enquiries as to what plants were eaten by the Indians, so aroused his curiosity that he decided to explore the upper country. While he was preparing for this trip he received a specimen of Douglas fir sugar from James Teit of Spence's Bridge, who said that Indians in his district had used it many years for food. Immediate investigations were made by Prof. Davidson, who was surprised to find that no previous record had been made of the existence of Douglas fir sugar. The professor says that the sugar cannot be relied on as an annual crop, as some years it is abundant, other years very little is found.

The region in which the sugar-

bearing firs are most abundant includes the driest and hottest part of the British Columbia dry belt, namely, Thompson Valley, west of the mouth of the Nicola River, near the junction of the Thompson and Fraser Rivers, including Lytton and above Iilooet in the Fraser Valley, Spence's Bridge, Kamloops, Savona Nicola and Similkameen valleys, and is said to be in the southern portions of the Okanagan Valley.

When asked about the commercial possibilities of the discovery, Prof. Davidson said sugar-bearing trees were in such a limited area and conditions under which they exuded sugar have to be so ideal, that its use as a household substitute for the Cuban variety is unlikely.

No Perpetual Leases Granted

The Underwood resolution, now before the United States Senate, which calls for the appointment of a Commission looking toward the removal of the embargo on the exportation of pulpwood from Canada to the United States, was before the New Brunswick Provincial Government at a meeting recently.

Premier Foster said the resolution had been received through the State Department at Ottawa, but he declined to state what action would be taken, beyond saying that New Brunswick would be properly represented when any negotiations were actually commenced, and the position of the Province in the matter would be set forth.

"It might be well to point out," the Premier added, "that the American interests holding leases on Crown lands in this Province took out their present leases when renewals were made a few years ago, at a time when they had a full knowledge of conditions as they exist to-day, as there was an embargo in effect in the Province at that time."

Tudhope-Anderson**Detachable Lumber Trucks**

Unequaled stand-up-ability on tough, rough and soft road-beds are the tests that explain the widespread popularity of these sturdy trucks among lumbermen. Cut shows Front Hauling Gear No. 41 coupled to Hind Gear No. 42. One or more Hind Gears may be attached or detached with ease.

Look at the wide tire steel wheels. They mean easy hauling. We guarantee them. Spokes may be renewed in case of accident—not so with others. Axles are high quality square steel ensuring many years' service. Wood parts are best oak, air-seasoned and kiln-dried. All parts well ironed and braced.

Built to the following specifications:—

No. of Truck	Size of Steel Axle	Tire Inches	Wheels Inches	Frame Length	Width
41 Front Gear	1 3/4" square	4 x 3/4	26	5 feet	40 inches
42 Hind Gear	1 3/4" square	4 x 3/4	42

Review of Current Trade Conditions

(Continued from page 61)

degree to the extra cost of production. And under this head would be placed principally the huge wage which it is now necessary to pay all workmen in connection with the wood business.

United States

During the past few days fluctuations in hardwood prices have been less pronounced; demand continues strong and offerings are disposed of without difficulty, but the buyer is not seeking lumber quite so insistently. The tendency seems toward a stable price-level, particularly in the southern woods. While further advances have been noted in lists from northern producing districts during the week, they have been, for the most part, moderate increases, fully warranted by the demand and the decreasing supply of stock.

The general situation is little changed. Manufacture is virtually suspended in many of the southern districts because of log shortage. Improved weather conditions, if long enough continued, will permit general resumption of logging and a beginning toward replenishment of mill stocks. There is little hope, though, that the supply can be greatly increased before summer. Logging conditions in the North are somewhat improved, several days of warm weather having reduced the accumulation of snow. Labor is reported more plentiful and supplies of logs increasing rapidly.

The car situation hasn't materially changed. Some very energetic and persistent work is being done with a view of getting some of the surplus transportation equipment, said to be held by eastern railroad lines, diverted to the northwest. The proposed turning back of the railroads to private ownership March 1, appears to complicate the already demoralized condition in transportation circles. Apparently the Federal authorities do not care to inaugurate any radical change in policy and individual executives of the railroads have no authority to do anything until after March 1.

Prices still show an upward tendency. This is due almost entirely to the bidding up of values by buyers who hope, through this means, to get a considerable supply of this forest product. The manufacturers are anxious to see prices remain at the price lists which were issued along the first of the year. The only way in which they

can conserve their supply, however, is to adjust their prices to conform to market values. Failing to do so they are deluged with orders.

There doesn't seem to be any perceptible increase in the supply of lath. Manufacturers of lath machinery are being deluged with orders from the lumbermen and others who are desirous of engaging in the manufacture of lath and profit from the abnormal prices of lath. The supply of new and second-hand lath machinery, however, has been completely exhausted. Orders have been booked by some of the manufacturers which it will be impossible to fill before next fall.

There has been considerable demand in evidence for yellow pine but the quality of insistence that has in recent weeks resulted in the rapid elevation of prices has been absent in a considerable degree. Buyers have been willing to pay current asking prices for their requirements, but fewer have been in the market and the disposition to bid prices up seems to have disappeared, temporarily at least.

There are indications—some of which are enumerated in the foregoing paragraph—that the peak has probably been reached in the price-level and that a season of relative stability is in immediate prospect. Most price lists issued recently have shown increases, but it is noticeable that for the most part these are confined to a few items that have been exceptionally good sellers; with a few exceptions, the quotations of the week are much the same as of last week.

Favorable weather conditions in the South during the last ten days are resulting already in better operating conditions. Logging has been resumed except in the lowlands and the percentage of mills that were closed, or their output reduced, because of excessive rains is now small. Labor is plentiful in most districts and most of the mills are sufficiently supplied with cars to move all stock ready for shipment.

Altogether, the situation is more encouraging for an increased volume of business at good prices than it has appeared during recent weeks. Given fair stability in prices, there is no reason to anticipate reduction in demand. The indications are, rather, that stable prices will result in heavy buying from sources now largely out of the market.

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

Ottawa Reports Business Active and Prices Firm

Firm prices and a continued strong demand, coupled with the prospect of future good business, and the mention of a possible further advance in prices, were some of several features of the Ottawa lumber market during the closing period of February.

Orders and inquiries increased. Stocks got lower, and in fact with some companies reached a point that it was a question of turning down or only partly filling orders for new business, or keeping old regular customers protected and supplied?

In addition there were two, if not three, outstanding factors affecting the market, which attracted the attention of lumbermen. They were: The possibility of the Board of Commerce or the Government deciding to generally investigate lumber prices throughout the Dominion or impose some measure of export restriction; the adverse exchange rate with the United States; and the continued doubtful result of this year's bush operations.

On the whole the market for the present remained just as good, if not better than it had been during the early part of the month, or during January. Prospects in some ways for greater spring building campaigns brightened, though the murmurings of landlords, that they were hardly making interest on their invested capital, tended to throw cold water on the optimistic outlook for the building in the spring.

Out of a crop of conflicting possibilities as to what would eventually happen, there appeared to be one bed rock fact, and it was that the sale price of lumber was not going to come down until production costs warranted it, or the supply grew greater than the demand.

The general feeling of the trade, and the lumbermen were most sincere in expressing it, was that lumber always had a real and actual value, whether in the woods or out of it, and it would continue to maintain its place as a commodity of life in civilized communities the world over.

"People who restrain from building on account of the price of lumber do not know what they are talking about, have been misled, or have not considered the total cost of erection fully," said Mr. P.

C. Walker of Shepard & Morse. He further pointed out that the advance in the cost of heating and plumbing had increased between five to six hundred per cent. as compared with 1914 and added: "Suppose five thousand feet of lumber is used in the construction of a brick veneer dwelling. It formerly cost between \$150 to \$200. Now it costs between three hundred to three hundred and fifty dollars. It is labor and other materials that run up the cost of building."

The advance in the price of lumber, he claimed, was justified by the lumber operators having to pay increased wages both at the mill and in the woods, and the augmented cost of camp supplies and operations.

The principal increase in demand came from the United States. Canadian and local business also showed improvement. The turning down of some of the American business was more or less a sore touch to some lumbermen who preferred to look after and protect their old customers first. It meant they passed up the chance of taking advantage of a favorable exchange rate to them, which at the date of writing amounted to fifteen per cent. in addition to any profit they might have figured on making when they made their quotations.

In some quarters quaint stories were told—not for publication of course, as to how the exchange rate was working out, and how Mr. So and So, or such and such a firm had been "stung" through neglecting the legal formality of stipulating that the invoice price was to be payable in American currency.

The "Canada Lumberman" has been given to understand that some American buyers through their bankers, have established payment branches in Canada for the purpose of trying to escape the payment of the premium on American money to the Canadian sellers. Sellers in the Ottawa Valley, however, have wakened up—that is the most of them, and they now stipulate in the agreement of sale that the consideration be paid in American money.

An example as to what the above means to lumbermen is as follows: Smith and Co., say, sells lumber to the value of \$10,000 to an American buyer, but fails to observe or neglects to state in the

terms that the payment be made in American money. The American buyer can pay the amount mentioned through his banking agent in Canada and get away with it; thereby the seller loses the advantage of the favorable exchange. Jones & Co., on the same transaction stipulate that the amount be paid in American money, and even if the amount be paid through a Canadian banking agency, he gets his \$10,000 as American cash, on which he can collect his exchange.

Up to Feb. 22nd it still remained a question with the Government as to what, if anything, should be done in the way of curtailing or prohibiting the export of lumber to the United States.

Bush operations in the Ottawa Valley have not been going ahead as well as had been previously expected. The camps of some companies are little better than half filled, and transients are continually adding to the difficulties of an increased log output. Further it was generally conceded by the heads of representative companies that the quality of labor was inferior to that of pre-war years, and, in one case, the instance was mentioned that some returned members of the Canadian Forestry Corps, who were efficient woodsmen, were not seeking to go to the bush, so long as the Government provided them with \$60 per month as a re-establishment remuneration.

The foreign car situation to the United States grew worse and cars became fewer. One of the explanations given by the trade was that they were held up owing to the heavy storms which had occurred in the north eastern States.

Conditions with the woodworking plants remained about the same as during the early part of the month. Though no formal demands had been presented it was expected by the factory owners that the workers would ask for higher wages on or before May 1st.

Montreal Business Brisk But Stocks Low

There is still uncertainty in the Montreal lumber market. Business is very brisk for this time of the year, but the great drawback is the difficulty of securing stock. Those fortunate enough either to have supplies or can get supplies from the mills are able to dispose of them at very good prices. "We can get a certain amount of lumber," said one lumberman, "but the prices asked by some mills are prohibitive. We cannot do business on the basis quoted. The market threatens to get top-heavy, and we do not propose to speculate at such high prices." This is one view of the outlook. Another is that all conditions make for a maintenance of present prices; the tendency indeed should be upwards, having regard to the cost of manufacturing, the increased demand which is bound to come, and the general increase in expenses.

The American buying is especially good, the dealers over the border being willing to pay the stiff figures quoted. One firm stated that they could obtain better terms from American buyers than from the domestic trade.

Lath is still very strong; the product from the saw commands a high figure, somewhere round about \$17.50 per 1,000.

B. C. stocks are in short supply, and the outlook is against any addition, so long as the demand for American account keeps up. As to price, there is no hope of any reduction for some time, although one wholesaler with a long experience on the Coast looks for a slump, should the American buying show any slackening. It is a question of "feast or famine," he said, in the West, and this excessive rush for B. C. stock is certain to result in over-manufacturing.

Local trade is fairly good. The prospect for building this spring is satisfactory, provided always that labour will not again force up prices. There are indications that an attempt will be made to get further advances, representatives of U. S. unions having been very busy urging the men to organize and to demand more pay.

The message from Ottawa foreshadowing measures by the Board of Commerce to restrict or prevent the export of lumber, owing to the present shortage of supplies, has caused a large amount of discussion of the subject by Montreal lumbermen. Opinion is decidedly against such measures, as being prejudicial to Canadian interests as a whole, and as being certain to very materially injure the lumber industry, largely built up on an export basis. If, it is pointed out, the lumber trade had to depend upon the home demand alone it would mean the almost certain ruin of the industry, and would also involve the loss of a very large sum in railway and shipping rates. "We have been urged," said one lumberman, "to extend our trade with the States in order to restore the balance of trade; we do all we can in this direction, receiving a premium on our sales, and now we are threatened with a stoppage of this profitable business. Let us be consistent; don't urge us to extend our business, and, then having done it, try to ruin us. We are entitled to trade in the market which will give us the highest return,—and any artificial restrictions are bound to react against Canada. Such a plan will mean financial loss to the mills, wholesalers, retailers, men employed in the various branches, and to those who supply equipment of all kinds."

It is also pointed out that the statement in the Ottawa message

as to a good profit being made on lath at from \$1.50 to \$2.50 per 1,000 is without foundation. Millions of lath were formerly marketed at a loss, and the present high price is due to very exceptional circumstances, and to a demand for stocks on a bare market,—a condition brought about by the mills declining to manufacture large stocks on which they formerly made a loss.

With regard to the situation in B. C., it was remarked that for years the manufacturers were in a more or less precarious condition, owing to a too large production and a small demand. Now that they are making money, consequent on an export business, the Government is asked to put an embargo on their goods,—in fact, to kill the industry.

A Worthy Covering for a Good Building

By A. O. F.

There was a farmer of Ontario who saith to himself.

I shall build me a barn to store my hay and also my grain.

The length thereof shall be eighty feet and the width shall be sixty feet.

The basement thereof shall be built of stone or concrete.

In it shall my horses, cattle, and other stock be warm.

The sides and ends of the barn shall be built of good seasoned White Pine.

And the roof thereof shall be iron with a thin coating of zinc thereon.

And the barn was built and it was a goodly barn to behold.

But year after year there arose from the hay and grain stored therein a moisture.

And year after year there arose a vapor from the breath of the cattle in the basement thereof.

And the moisture ascended even to the roof.

And the moisture caused a corrosion, likened unto rust into the nails with which the metal was nailed.

And the nails were weakened and the heads thereof fell off.

On the seventh day of the seventh month of the seventh year after the barn was built.

There arose a great and mighty wind.

And the wind blew with great force and got beneath the metal sheets which were corroded and loose where they had been nailed.

And the wind blew the metal down even to the barn-yard and to the orchard which was beyond the barn-yard.

There were no plates left on the roof of that barn.

On the eighth morning of the seventh month of the seventh year after the barn was built.

The farmer arose as was his custom, went to the barn-yard and his heart was sore and greatly grieved.

And thus to himself did say.

"The season of hay and also of grain harvest approacheth, and now have I no dry and secure place wherein to store my produce."

"If when I built my barn I had done as my neighbors had done and used good British Columbia Red Cedar Shingles this would not have befallen me."

"Had I used such shingles the roof of my barn would have served its purpose for more than thirty years."

At noon on the eighth day of the seventh month of the seventh year after the barn was built.

He arose and departed, both he and his hired man; with teams.

And they travelled a great distance.

After many hours they approached the dwelling of a dealer, who dealt in lumber and shingles.

And made bargain with the dealer for a goodly supply of Red Cedar Shingles and departed for home.

Both he and his hired man with teams heavily loaded with shingles.

On the ninth morning of the seventh month of the seventh year after the barn was built.

He departed on a journey unto the first and second line even unto the fifth line of the township wherein he dwelt.

And he called on many of his neighbors and thus to them did say.

"I have learnt wisdom in roofing."

"The metal of my roof has blown down and is no more good."

My loss is great, and I am sadly annoyed.

But I have supplied myself with a supply of good Red Cedar Shingles and galvanized nails.

"Come thou with me and bring thy hammers and we will nail those shingles on my roof."

And they did so.

And lo! he hath now a good permanent roof which requireth no paint.

Neither will it need repair for thirty years.

It is a goodly roof.

A worthy cover for a good building.

EDGINGS

Ontario

The Quincy Adams Lumber Company, of Gravenhurst, intend erecting a sawmill at Ravensworth, Ont.

The Sioux Lookout Lumber Company has been incorporated with headquarters at Port Arthur and a capital stock of \$20,000. A. J. McComber and others are among the provisional directors.

The capital stock of the Huntsville Lumber Co., Ltd., Huntsville, Ont., has been increased by supplementary letters patent from \$42,000 to \$200,000.

The Bancroft Timber Company, with headquarters at Bancroft, Ont., is the name of a newly organized concern, with a capital stock of \$1,000,000. Stanley Dodd Pearce, of New York City, is one of the incorporators.

The Piggott Lumber Company, Windsor, Ont., has sold the site of their lumber yard to a Jackson, Mich., syndicate, for \$100,000, who will erect a fine modern hotel on the property. The Piggott Company have secured another location for their activities.

W. D. Midmer, Limited, with a capital stock of \$100,000, and chief place of business at Napanee, Ont., have been granted a charter to manufacture and deal in lumber, building material and mill supplies. The incorporators are Walter D. Midmer, Philip Woodcock and others, of Napanee.

Robert D. Chisholm Lumber Co., Ltd., with headquarters at Fort Frances, Ont., and a capital stock of \$300,000, has been incorporated to carry on the business of lumbering in all its branches and to manufacture and deal in logs, timber, wood and wood products of all kinds, as well as to operate saw-mills and lumber yards.

Only one bid, which was for \$200,000, was made at the auction of the R. H. Klock timber limit recently at Ottawa. As this bid did not come up to the reserve bid, Auctioneer W. A. Cole withdrew the limit and it will likely be sold privately. The limit, in the Kipawa district, is 100 square miles in area and contains pine and spruce.

The Quincy Adams Lumber Company, which employs a number of men at Ravensworth, suffered a severe loss recently through the destruction of their camps by fire. The buildings were insured but the contents, valued at over \$5,000, were a total loss, no insurance being carried. New buildings will at once be constructed to replace those which have been lost.

E. J. Callaghan, Limited, with a capital stock of \$100,000, and headquarters in Fort Frances, Ont., has been incorporated. Wide powers are conferred on the new company, which in addition to buying, selling, importing goods and wares of all kinds, is authorized to carry on the business of lumbermen, ship-builders, etc. The incorporators are Edward J. Callaghan and others, of Fort Frances.

Modern Wood Products Ltd., have been granted a charter with a capital stock of \$60,000 and head office in Milverton, Ont., to carry on the business of a planing mill, and to purchase, sell and manufacture all classes of building materials, as well as to make and deal in furniture, lumber and all kinds of wood products. The incorporators are John Boshart and Enos Nafziger, manufacturers, A. C. Clemens, merchant, Norman H. Henderich, traveller, and John C. Grosch, all of Milverton.

The upper storey of the E. B. Eddy match factory in Hull, Que., was recently damaged by fire to the extent of several thousand dollars. The fire originated in what is known as the box bins on the top storey among some thousands of boxes which were stored there. There was considerable excitement among the three hundred girls employed in the factory at the time of the blaze, but all escaped with safety.

The Canadian Wirebound Boxes, Ltd., with headquarters in Toronto, has been granted a charter. The capital stock is \$300,000. The organization is empowered to carry on the business of manufacturing and dealing in wire-bound boxes, as well as lumber, pulp and other forest products. Other powers are to engage in the planing and dressing of lumber and building materials of various kinds. The incorporators of the company are L. A. DeLaplante and others, of Toronto.

The shareholders in the Sterling Bay Lumber Co., Tenby Bay, Ont., had a meeting recently and the following officers were elected: President, M. Mickalsen; vice-president, Peter Bergan; secretary, J. O. Johnson; treasurer, Peter Bergan; board of directors, H. Gilbertsen, K. Thompson, O. Solberg, O. Bjornea, and Geo. Bout. The directors are getting machinery and other equipment, and expect to get motive power ample enough for the manufacturing of furniture, if this be decided later on.

The 28th annual meeting of the Association of Ontario Land Surveyors in Toronto was featured with addresses by Lt.-Col. R. Leckie, of the Canadian Air Board, and H. L. Seymour, D.L.S. Col. Leckie's topic was "The Possibilities of the Aeroplane in connection with Surveying." Col. Leckie stated that aerial photography in war time was the means of revealing the so-called hidden batteries and concealed guns. He pointed out a number of errors which must be eliminated before accurate photographic survey can be made. Mr. Seymour's address was based on "Housing and Town Planning."

Eastern Canada

Eugene Leclerc will rebuild his sawmill at Lotbiniere, Que., which was recently destroyed by fire.

M. A. Grandbois, Reg., St. Casimir, P.Q., lumber dealers, recently dissolved partnership and Henri Grandbois registered as owner.

B. L. Tucker has sold the Moose River, Cumberland Co., N. S., lumber property to J. W. Kirkpatrick, M.P.P., of Passafium, N.S., who will operate same. The price paid is in vicinity of \$150,000.

A charter has been granted to the Canadian Timber Securities Limited, with a capital stock of \$250,000 and headquarters in Quebec. The company is empowered to underwrite, subscribe, purchase, acquire, hold, etc., bonds, debentures, stocks and other securities, and to purchase, lease and deal in tim-

berlands and limits, wood lots, standing timber, cut timber, sawmills, etc. Among the incorporators are:—Frank B. Common, L. H. Ballantyne and F. G. Bush, Montreal.

A charter has been granted Canada Timber, Ltd., with a capital stock of \$75,000 and headquarters in Montreal. The company is empowered to carry on in all its branches a lumber, timber and pulpwood business. Among the incorporators are F. P. Brais and others.

Archambault-Leclair Limitee is a new concern which has been incorporated with a capital stock of \$100,000, and headquarters in Montreal, to carry on business as general contractors and do construction work in dwellings, houses, ships, piers, dams, etc. J. A. A. Leclair, of Verdun, Gaspard Archambault, civil engineer, and others, are incorporators of the company.

Joseph A. Likely, timber merchant; W. Malcolm McKay, lumber broker; Frank J. Likely, timber merchant; Wm. J. Hamilton, and John C. Belyea, barrister at law, all of St. John, N.B., have been incorporated as The Fundy Land Company, Limited, to carry on the business of a real estate and land company, to carry on a lumbering and timber business and to own and operate mills and such other facilities as may be convenient or required for the proper carrying on of the lumbering or timber business, and to produce, manufacture and sell cured fish, canned and preserved meats, fruits and dairy products. The capital stock of the company is \$5,000, divided into 50 shares of \$100 each, and the head office to be in the Parish of Lancaster, in the County of St. John.

Mr. Fabien Bugeaud, member for Bonaventure, suggested in the Quebec Legislature Assembly that the government prohibit the export of unmanufactured pulpwood to the other provinces, and if this could not be done to place a royalty or a duty on such export. The suggestion was supported by Mr. W. R. McDonald, member for Pontiac. He said that when he saw the industrial development in Ontario with pulpwood exported from this country his conclusion was that this province was not getting the results which were its due. Hon. Honore Mercier, Minister of Crown Lands, said that many other provinces were supplied with raw materials by the province of Quebec. He was not ready to say what would be done in the future in this connection, but after a careful survey and study of the situation, the government would take proper action to protect the interests of this province.

Western Canada

Cedars Limited, Lynn Creek, B. C., have put their sawmill in operation for the coming season after being closed down for several weeks.

Forest products of British Columbia in 1919 were valued at \$62,000,000, according to a report filed in the House recently. Timber values are placed at \$31,000,000; shingles, \$12,000,000; box industry, \$2,162,000.

All the sawmills in British Columbia have been notified by the Canadian Pacific Railway that in future no more box or flat cars will be sent into the United States, owing to the great delay involved before they are returned, thus creating a local shortage.

Five new sawmills are being projected along the Esquimalt and Nanaimo railway, and plans are being prepared to construct sidings for their use. Nearly a million dollars will be appropriated this year for the general construction work of the railway on Vancouver Island.

Major James Brechin, former B. C. Lumber Commissioner in Eastern Ontario, who resigned some time ago and left Toronto for the west, has been appointed private secretary to Hon. Dr. King, Minister of Public Works, Victoria, and has entered upon his new duties.

The sawmill of the Thompson-Ford Lumber Company at Kelso, B.C., was recently wiped out by fire, which started by a spark from friction. The loss was between forty and fifty thousand dollars, which was only partially covered by insurance. The company intend to rebuild at once.

Major Richard Burde, member for Alberni, has given notice of his intention to introduce a bill "to regulate the hours of labor in certain industries in British Columbia." The measure concerns principally the sawmills, in which he desires to see an eight-hour day established.

Too much snow in the woods is the word that comes down from the northern lumber camps. In the country around Lesser Slave Lake there is an average depth of 4 feet, with frequently five and six feet, whereas the usual snowfall is not more than two feet. As a result lumbering operations are being somewhat seriously handicapped.

An appropriation of a million dollars from the funds of the Province of Manitoba to meet the housing requirements of Manitoba during the current year was announced by Hon. Edward Brown, Provincial Treasurer, in the Legislature. This million, the Provincial Treasurer explained, would be in addition to a million available from a federal grant.

M. Whitman, a resident of Vancouver for the last thirty-one years, died recently at his home in that city in his 65th year, after an extended illness. He was the senior member of the firm of M. and J. W. Whitman, of Topaz Harbor, B.C., and was a prominent figure in the logging industry for over twenty years. He is survived by four daughters and two sons.

Among the recent incorporations of British Columbia are the Rat Portage Logging Transportation Co., Vancouver, capital \$200,000; the Gerrard-Lardo Lumber Mills Ltd., Vancouver, capital \$300,000; Ryan, McIntosh Timber Co., Ltd., Victoria, Vancouver Island Lumber & Supply Co., Victoria, capital \$20,000; Tyee Lumber Co., Ltd., Victoria, capital \$40,000.

The sale of the timber holdings and logging camps and outfit of the Wilson Brothers Lumber Company, near Independence, to the Independence Logging Company was recorded recently. The principal owners of the new company are said to be Krum Brothers & Synnesvedt, known as the K. & S. Logging Company, of Oakville. The timber included in the sale amounts to 150,000,000 feet.

According to an announcement made by the Hon. T. D. Pattullo, Minister of Lands for B. C., timber sales for the month of January this year have been far in excess in point of number and value to those in the corresponding month of last year. Forty-three individual sales were consummated last month as against 38 in January a year ago. The value received by the department in respect of them, amounted to \$143,575, or two and a quarter times as much as the revenue in January, 1919.

"Broken! What No. 1 Again?"

Yes, broken again! The old, old story of the manufacturer who insisted on using belting of inferior quality. In times of big orders, or important deliveries, when the utmost efficiency is required, inferior quality belts will not stand the strain.

Surely you realize that your belting bill does not consist of its initial cost alone. Consider that tell-tale drag on finances through constant repairing plus loss of time and danger to life.

These items alone during one year will swell to amounts that would keep you installed with "Camel Brand Belting," and in this way insure yourself constantly against shrinkage and excessive repairs, and could be relied on to transmit the full power of your plant with practically no loss. "Camel Brand Belting" may be obtained in all widths. Write us to submit our prices.

DISSTON-SAWS

THE BEST KNOWN SAW IN THE WORLD

Each year finds a greater number of leading mills using Disston Saws exclusively. Mill operators know that the success of their mill—the quality and quantity of lumber they turn out—depends on the saw they use.

It is natural, therefore, for them to choose Disston Saws—the acknowledged standard in quality for 80 years.

HENRY DISSTON & SONS Ltd.

TORONTO, CANADA

Branch: Vancouver, B.C.

LEVIATHAN-ANACONDA

Names that are Synonymous with Service in **BELTING**

When you buy Main Belting you buy Service. Any belting sold on a different basis is a poor investment. We guarantee our belting. This does not mean making general claims. Every Leviathan and Anaconda belt that leaves our hands still retains our surveillance. We consider that the buyer of one of our belts has not received full value until we assure ourselves of his satisfaction, as to efficient service throughout the whole wearing life of the belt he purchases.

Canadian Lumbermen are assured that the makers of Leviathan and Anaconda Belting will stand behind their

product until it has proven its worth.

Our new catalogue will give you some interesting information on belting and belts in general.

A copy awaits your request.

Would You Spend \$575 to Save \$2,000?

Last Fall a certain lumber concern in Ontario purchased a small 10 H.P. Double Drum Belt Driven Hoist from us for handling logs. This machine cost them \$550, plus \$25, freight, total \$575. They operated this small Hoist by a belt from a gasoline Engine, the whole making a light, compact, portable outfit, easily moved from place to place.

They were able to work this outfit in the coldest weather, and found that it did the work of three or four teams.

As it required only one man to operate the Hoist, it is easy to figure the daily saving effected by the use of this machine. In other words, compare the wages and board of one man and the cost of a little gasoline with the wages and board of four drivers and the feed and upkeep of eight horses.

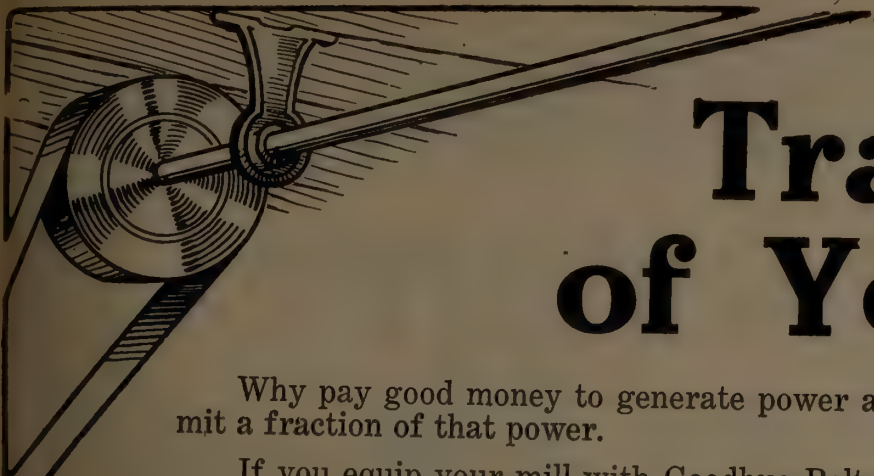

This machine handled up to one thousand logs per day.

We make these machines for either Steam or Gasoline Power, and in 7 sizes, one of which should be just right for your use.

Marsh Engineering Works, Limited, Belleville, Ont.

ESTABLISHED 1846

Sales Agents: Mussens, Ltd., Montreal, Toronto, Winnipeg & Vancouver.

Transmit 100% of Your Power

Why pay good money to generate power and then employ a poor belt that will only transmit a fraction of that power.

If you equip your mill with Goodhue Belts you can transmit 100% of the power generated.

Goodhue Belts stretch 15% to 25% less than other belts and have just the right amount of "cling" on the pulley.

SYRACUSE BABBITTS

for bearings
big & little

Tell us what is the pressure, impact and R.P.M. to which your bearings are subjected and we will advise you just what babbitt will best stand up under those requirements.

And if you have a babbitt problem, we will be glad to help you solve it.

Are you reading the instructive questions and answers on babbitt metal problems, which appear here every month?

Question No. 7

Are the purest grades of raw metals absolutely pure?

ANSWER

No. The purest tin and antimony contain impurities, and a small fraction of a percent of impurities will affect the quality of a babbitt. Few babbitt manufacturers, however, go to the expense of purging the raw metals, so long as the analysis is there. The Stanley Process used in alloying our babbitt metals, involves a purging and refining of the raw metals, to eliminate every vestige of impurities. You pay for it, but the better service your bearings give you, more than repays you.

The Quality Standard that Produces "Plus" Service Belting

The only sure way to get satisfactory service is to buy products of known worth.

In Dominion Rubber System Belting, the worth is known because every ounce of material—each individual operation and each finished belt must test up to the highest quality standard ever made for belting.

From the time the materials come into our factory until the belt is running on your pulleys, there is no chance of your getting anything but "plus service" belting.

This is the result of over fifty years of belt making experience and research by the oldest, largest and most completely equipped rubber organization in Canada.

The rubber that goes into Dominion Friction Surfacing Belting is not a mere waterproofing substance—our chemists have given it a far greater value by making it into a friction compound that prevents practically all power wastage on the pulleys.

"Plus service" includes the free technical advice of our belting engineers who are ready to help you with your transmission and conveying problems without placing you under obligation to us.

A phone call, wire or letter to our nearest branch places all of our facilities at your disposal.

BEAVER BOARD

for Better Walls and Ceilings

Sell the Walls and Ceilings Too

While you are selling the lumber, the framing, sheathing, shingles, floors and interior trim, why not sell the walls and ceilings too?

Beaver Board makes this possible. It is the "ready to use" wall and ceiling. It is easily stocked, can be delivered with other building materials and brings you a steady profit.

While Beaver Board is performing a good service for you it is doing the same good turn for the builder. Carpenters erect Beaver Board. They can stay on the job from start to finish. No time is lost waiting for plaster to dry. When painted and decorated it can be

repeatedly washed with soap and water; it is as permanent as woodwork and hardwood floors.

Beaver Board advertising is constantly building up good-will for this substantial product. It is the "all the year round" kind of publicity that keeps the orders coming in every month in the year. Beaver Board advertising creates this demand. Beaver Board quality meets it.

Here is a new product you should know about—*Beavertone*, a velvet flat paint for Beaver Board—especially made by the manufacturers of Beaver Board.

We have an interesting story for the dealer. Let us tell you about it.

You can't expect Beaver Board results unless this trade-mark is on the back of the board you buy.

The Ideal Edger for Light Mills

Specifications

Our new Double Edger is built on entirely new lines, and possesses many features that commend it to mill men. The saving in material alone will soon pay for the machine. The output of a mill with this machine can be increased by one-third. It is best adapted for medium-sized or portable mills that cut from 5,000 to 25,000 feet of lumber per day.

SAWS—This Edger is fitted with either two or three saws as required. The saws are 16 in. in diameter, and 10 in. gauge. The greatest distance between saws is:—Two saw machines, 24 in.; three saw machine, 20 in., the least distance between saws, 2 in.

DRIVE PULLEY—The Drive Pulley is 9 in. x 9 in., affording a good belt grip, and is supported by an outside bearing.

SAW ARBOR—The Saw Arbor is made of 2½ in. steel, and has very wide bearings.

SIMMONS BEDS—Built for Sleep

Simmons Limited, 1920

Why can't you get better rest

IF people would give as much thought to the *sleeping qualities* of a bed as to its looks, there would be fewer "light" sleepers.

The average bed is made as a piece of furniture—sold as a piece of furniture—bought as a piece of furniture.

And hardly a thought from anybody about *sleep*!

* * *

RELAX—there is the master-secret of sleep!

Possibly you are one of thousands who seldom get a clear night's rest. Look to your bed!

Most wooden beds creak a little.

The average metal bed

has a loose joint—rattles slightly—feels unsteady.

Or maybe it is the spring that does not fit. One corner or another knocks slightly when you turn over—or it humps or sags.

* * *

THE right bed invites perfect relaxation. It stands firmly. Its corners lock tight. Push it or pull it by one corner and it moves as one piece—not a rattle, a shake, a lurch, a suspicion of unsteadiness.

The right spring gives gently to the contours, but supports the body—a taut elastic foundation for the mattress. It does not sag or hump. It fits squarely on the bed.

YOU may not know where to find a spring of this character. You have only to go to a leading merchant in your section and look at Simmons Metal Beds, Waldorf Box Springs, Simmons Mattresses and Pillows. They will not cost you any more than the average bed.

You will get a bed, a spring that *invites sleep*.

And when you are selecting your Simmons Beds with an eye to their appearance in the room, you will see that Simmons has for the first time established *beautiful and authoritative design* in Metal Beds.

You will have unequalled choice of *Twin Beds*—a separate bed for each sleeper, welcomed everywhere by people of nice feeling.

Sleep is a big subject! Write us for the brochure, "What Leading Medical Journals and Health Magazines Say about Separate Beds and Sound Sleep." Free of charge.

ATKINS STERLING QUALITY SAWS

Sterling Quality Steel— Atkins' Exclusive Formula

The most essential feature of a saw is the material used in the blade. It must be hard, so as to prevent the teeth from bending or dulling easily. It must be tough enough to withstand hard knots and obstructions. It must file and set readily to save the filer unnecessary time in refitting. Yet, it must not be brittle, or the teeth and points will break off in use or in refitting.

When we say that a blade is of Atkins high grade special steel, we mean that it measures up to these conditions in the highest possible degree.

The formula for the manufacture of this steel is our own exclusive property. The product is exceedingly smooth and close grained and is actually as fine in quality as the metal of your keen edged razor.

Atkins Saws prove their worth through the Sterling Quality of their steel. Always use ATKINS.

Gloves and Mittens

THEY'RE ALWAYS SOFT

Lumbermen favor "ASBESTOL" because they not only resist the roughest kind of wear, but they **STAY SOFT AND PLIABLE**.

Heat, steam or water does not harm "ASBESTOL." You will appreciate these features.

See that "ASBESTOL" is stamped on the work gloves you buy.

Tapatco Stapling Device for attaching hooks gives a firm hold long after the fabric itself has become weakened by use.

Right willingly they tug— when their necks are comfortable

The work your horses do, depends largely upon the condition of necks and shoulders. That's where the strain comes, as they tug at the traces. That's where protection is needed. The only proper protection is that afforded by stuffed collar pads such as

TAPATCO

REGISTERED TRADE MARK
BRAND

Made of splendid grade of drill, stuffed with a special composite "stuffing," our Pads fit snug to the neck, absorb the sweat, and so completely "cushion" the shoulder muscles that the comfort of your horses is ensured.

Think of the loss you suffer when horses are laid off—do away with sore shoulders by this sure protection, and so keep your horses at work every working day in the year.

Tapatco Pads are soft, springy, absorbent—they prevent galled, bruised and chafed shoulders.

These Pads are sold by practically every merchant who carries harness or hardware. Do not take substitutes. Insist on "The Pad with the felt washer under the hook staple" (Patented in U.S.A. Dec. 1, 1914. Patented in Canada Apr. 6, 1915). If you have any trouble getting this brand, write direct to

LOG LOADING

Use your motor truck for this work by installing a BAY CITY WINCH.

You can load your truck or a trailer without other power than the truck engine. It saves time, money, men and labor.
